Maj Gen LS Kuter
AAF Rm. 3E 1078
The Pentagon

15 Aug 1944

The following items were received from the Office of The Quartermaster General 15 Aug 1944, in duffel bag, via special messenger:

1 - Jacket Field Wool OD
1 - Trousers " " "
1 - Jacket M-43
1 - Trousers, Cotton OD
2 - pr Suspenders
1 - Cap Field
1 - Cap Garrison, Overseas w/gold cord edge
1 - Sweater, High neck
1 - Undershirt Knitted, OD
1 - pr. Boots Service Combat
1 - pr. Shoepacks
6 - pr. Socks Cushion sole
Duffel bag and Liner

Singed:
L.S. KUTER
Major General, USA
Asst. Chief of Air Staff, Plans.

THIS PAGE IS DECLASSIFIED IAW EO 13526

SUBJECT: Commendation. 22 AUG 1944

SPROG (17 Aug 44) 1st Ind. JWM:bv
5873

Headquarters, Army Service Forces, Washington 25, D. C.

TO: The Quartermaster General.

1. Attention is invited to the comments of Major General L. S. Kuter, Assistant Chief of Air Staff, Plans, Headquarters, Army Air Forces, as contained in basic communication.

2. It is gratifying to have the efforts of the Technical Services recognized. Colonel Georges F. Doriot is to be commended for the splendid organization he has built and for his keen vision and forethought.

LeR. LUTES,
Major General, U.S.A.,
Commanding.

FOR RECORD ONLY:

1. Action follows basic communication frm Gen Kuter dtd 17 Aug 44 stating that Research and Development Br., OQMG have delivered a wool field uniform, combat service boots and several miscellaneous items of new or experimental field equipment for officers. Each of these itmes has impressed the General with the forethough and ingenuity that has gone into the design and development. He states that he was particularly pleased with the excellent fit provided by these garments which fit better than many professional tailor's products after several fittings.

2. Distribution: Major General L. S. Kuter,
Assistant Chief of Air Staff, Plans.

Maj. Gen. Kuter,
Asst Chief of Air Staff,
Plans

WAR DEPARTMENT
OFFICE OF THE SECRETARY
WASHINGTON, D. C.

19 August 1944.

MEMORANDUM FOR: General Kuter.

Attached for your information is a photostat copy of a letter to me from General Marshall.

I believe this will do much to stabilize thinking and effort both within the Army and outside on the development and adaptation of equipment and techniques for close support.

Edward L. Bowles
Edward L. Bowles.

THIS PAGE IS DECLASSIFIED IAW EO 13526

SECRET

WAR DEPARTMENT
THE CHIEF OF STAFF
WASHINGTON

August 1[illegible], 1944.

Dear Dr. Bowles:

Today one of our most important tasks is to interdict enemy movements of supplies, armor and men and to strike at the points where he has concentrated his equipment. Since the enemy must expect his rail transport facilities to be greatly hampered by our continuous air attack, he will depend heavily on motor transport effected under cover of darkness and weather adverse to aerial operations.

In order to give the fullest possible support to our attacking ground forces in this phase of the war, much of our strategic air power will be shifted to tactical operations designed to limit the mobility of the enemy. This change will accomplish the maximum result if new equipment and techniques such as were developed in the field of radar and related electronic devices for our strategic air offensive can be developed for our tactical air offensive.

You have indicated to me that we have available already numerous instrumentalities which, either in their present forms or with some modification, can prove of immense value for the tactical operations of the sort I have described. One such instance with which I am familiar is the adaptation of the SCR-584 gun-laying radar to the precise control of aircraft. If complementary techniques can be developed which would permit us to detect ground objectives such as motor transport and tank columns and, if possible, concentrations of armor and supplies, our offensive will be greatly implemented.

I take this opportunity to express to you my wholehearted support for research along these lines and to ask that you do everything within your power to insure that the efforts of all agencies both within the Army and outside of it are intensified and coordinated in such a manner as to bring this vital equipment and technique to bear on the enemy at the earliest moment.

Faithfully yours,

[signature]

Dr. Edward L. Bowles,
Expert Consultant to the Secretary of War.

UNITED STATES STRATEGIC AIR FORCES IN EUROPE
APO 633

7 August 1944

Dr. E. L. Bowles
Expert Consultant to the Secretary of War
Room 4E936, Pentagon Building
Washington, D. C.

Dear Ed,

I arrived at Pete Quesada's just as the big push was getting underway. His enthusiasm knew no bounds. The fighter-tank team had been brought to perfection under his handling and was working with all the smoothness and precision of a well-oiled watch. The crux of the matter, naturally, was communications, and this was solved by putting SCR 522's in tanks, half-tracks, and jeeps.

The tactics are centered around the armored divisions. Each division has one or more armored columns moving across the country with artillery and infantry backing it up. The spear-point of the column is a large detachment of tanks, moving down one or more parallel roads. In the forefront, usually right with the armored column commander is an "air support control officer" with his SCR 522. He is an Air Corps officer -- preferably a fighter pilot on his day off.

First comes the break through - this time touched off by the 8th and 9th Air Forces intense bombardment of the German front West of St. Lo. Then when the column starts moving the fighter-tank team comes into action. The tanks are literally led by the fighters. Each move they make is scouted by the fighters. It is fascinating to listen in on channel "C" of the VHF to the interplay between air and ground. All conversation is in the clear, and there is no restriction on geographical information because the forces are moving so fast that the Germans are unable to move their dispositions to meet the developing thrusts.

Needless to say, the VHF is jammed with traffic, but not so far by Jerry. The need for more channels is acute.

Let me give you a story illustrative of this type of close support as I had it from the mouth of one of the squadron commanders - Major Smith, if you please, of the 513th. He is

41339

SECRET

#15

1915

THIS PAGE IS UNCALSSIFIED

one of the most modest humans alive, and it is a chore to get anything out of him which reflects credit on himself. Little by little it spills out around the corners. This is briefly the story of two missions he led.

The first was an early morning mission, and the German tanks and artillery had withdrawn from contact as they started off. The tank column was just coming up within range of the brow of a hill as they appeared on the scene. "Hello, Kismet Red, this is Bronco. Have you in sight overhead. We have no targets now. Is there anything in the woods off to the left or over the brow of the hill ahead?" Five minutes later the answer comes back, "Bronco, this is Kismet Red. Don't see anything in the woods and there is nothing over the brow of the hill. There are twelve Tiger tanks about four miles down the road retreating. Shall we bomb them?" "Kismet Red from Bronco: Yes, go ahead and bomb them. Save some of your bombs if you can". So the P-47's go down and catch the tanks in a ravine. They blast the leading tank in the first pass and stall it. The others can't turn around and they are caught like eggs in a nest. Systematically the P-47's work them over from very low altitude and destroy them all.

The next mission, the tank column was catching shell fire from a woods a couple of miles to the left. The airplanes couldn't identify the target, so the tank artillery laid a red smoke shell on the aiming point. Major Smith's squadron dropped all their bombs on this wood and the fire stopped. The column moved on. The P-47's continued to fly cover, though without their bombs. A couple of miles further along they spotted eight tanks coming down a road at right angles which would bring them head on into the flank of the column. They called this down to the tank commander who had had no previous warning. Then they went down and strafed the tanks again and again until their ammunition was nearly gone. Then they observed a peculiar thing. A jeep detached itself from our tank column and drove gingerly down the road toward the Hun tanks. It drove in and out among them in a hesitant uncertain fashion. Then Germans started to pile out of the tanks. The whole column had surrendered to the fear of those little Hornets.

No wonder Quesada has a picture on his wall of a column of tanks, each one hitched to the one in front of it, and the lead tank with a rope on it attached to a halter over the wings of a P-47, which is struggling to bring the tank column up to his speed.

This is the kind of a war they are fighting, and do

THIS PAGE IS UNCALSSIFIED

the ground forces love it! The ground officers I talked to in many branches were uniform in their praise of the close support fighters. They confirm the fighters' high claims of damage to tanks and transport.

The problems of this close support are twofold: (1) To find the column and the target; (2) to hit the target. They are doing reasonably well on (1), but the pilots who have flown on SCR 584 controlled missions say that they often wish that facility could be extended to cover this type of mission. The reason that it can't may be partly the lack of training and experience, but much more fundamental is the difficulty of identification in skies so full of milling aircraft.

Their targets are for the most part tanks, batteries, small troop concentrations, and transport. The role in which they are supreme is in harassing an enemy that is forced to retreat by day. Their most common weapon against tanks is the 500# GP bomb either with .025 sec. fuse for dive bombing or an 8-11 sec. fuse for minimum altitude or glide-bombing. With this they achieve an accuracy of something greater than 500' probable error according to Lauriston Taylor. The pilots say from experience that it takes an average of 8 to 12 airplanes to be 50% sure of getting an individual tank. If they can catch a lot together their average goes up greatly.

Their next most common weapon is the .50 cal. gun. With this they not infrequently get tanks, and anything else easily. The tanks they have gotten by shooting through the air intake, hitting the tracks, or even going in through the sighting holes. Armor piercing incendiary is fast becoming the most popular ammunition.

Charlie Lauritsen's rockets are the least common but most popular weapon. They are reported to be accurate enough to hit a tank at 1000 yards, and potent enough to destroy it with one hit.

Now for my money, this is the only type of close support that is big time. We should never be stagnated without chance of a breakthrough because the Eighth Air Force can always use its overwhelming striking power to paralyze temporarily any fortified position and make possible a local breakthrough. Once the enemy is on the run the fighters can make life unbearable for him. It is our job as I see it as far as close support is concerned to make the fighters more effective in that role.

This is not an easy job radar-wise, but I am confident

THIS PAGE IS UNCALSSIFIED

it can be done. We now have before us the horrible spectacle of our American Tactical Air Force with more radar than ever accompanied any army anywhere - but all of it designed for early warning and GCI - this in a theater where we reign supreme in the air and the enemy shows his head in the daytime only at rare intervals and then abortively. You should hear the howls of glee when the cry of "bandits" goes up. Every fighter forgets he is a bomber and takes off in joyous pursuit.

Our night defense should be as good, but is not for several reasons. I witnessed one raid of twenty-odd Huns in which the controller (British) in the MEW made four perfect interceptions in as many minutes, but failed because the aircraft's "weapon was bent." There is positive disorganization in the operational tie-in of all the radar which comes entirely from lack of knowledge on the part of the operational people. Quesada told me he was going to put Cowart in as senior controller of the 70th Wing IX TAC, which has most of the radar, but the solution is not so simple because the ignorance is so widespread.

To come back to close support, it is my idea that there should be one 584 to each armored column and that this should move along with it just as the artillery does. Each fighter-leader should have a UPN-2 beacon or equivalent in his airplane which will be adjusted before take-off to the frequency of the 584 with which he is to work. With this identification and mobility the 584 will take its place as a major factor in close support, even in good weather. We must push beacons for this purpose as without them the 584 is a small-time special-purpose set.

Even with beacons, there is a need for a search set to feed flights into the 584. The MEW can't do it because of its relative immobility in a war that moves ten to twenty miles a day. The SCR 602 looks as though it will do the job, but again it is not here in sufficient numbers.

The biggest thing we can do in the immediate future is to push the toss bombsight to improve fighter-bomber accuracy. I have talked with fellows from Brereton down to the individual pilot and there is no dissenting opinion on this. The tests here have been discouragingly slow due to weather (which has been much worse over England than over Normandy), but the results have been good. I am hoping we will be able to schedule the grand demonstration before the middle of next week and show this off to all the big wigs. As I said in the teletype, Fred Anderson is going to call this himself and be sure that the

THIS PAGE IS UNCALSSIFIED

top notchers get to witness it.

Lauriston Taylor has been keeping in pretty close touch with the tests results with the Norden Bombsight tied into the 584, and it looks as though a probable error of 150 yards is not out of the question.

We now have five battalions of American 584 equipped 90 m.m. batteries on the South Coast for Diver Defense. Night before last the AA got 55. We may expect them to improve, but in the meantime the havoc in London is increasing steadily. V-2 seems to be closer all the time and it is now reported that over a thousand have been made. Launching appears to be done from flat concrete slabs, so there are few points vulnerable to bombing.

Aphrodite went yesterday. One spun in over England, (no casualties), one had to make two or three passes at the target and was shot down, one was reported 500 feet short and one 500 yards long. I am going up there tomorrow to see how Rand is making out.

We visited one of our 584's the other night as Art Warner's guest, and witnessed a poor performance. This decided Lee Davenport and Leo Sullivan to stay over about two weeks and start to put this house in order. They will work as leaders of a team which will carry on when they must leave. Art and John Trump are cooperating on the direction of this project.

The absence of Louis and Vic has emasculated our expert advice. We need them. Major Onthank is a tremendous addition. When does the other WAC arrive?

Hartley Rowe after an initial period of feeling out his opponents and back-pedalling footwork has cut loose with some blows to the body, as you know. It is a pleasure to watch the old Pirate work. I'd be happy to ride in his wake any day.

I must say this is pretty long-winded for a fellow who never writes.

Yours,

(s) Dave

MEMORANDUM TO THE ASSISTANT CHIEF OF AIR STAFF, O C & R:

Subject: Conflicting Statistical Data

1. Form SC-X-18, AFOCR as of October 1, 1943 shows that we expect to have, in the U.K. at the end of October, if no losses occur, 920 heavy bomber crews in reserve which represent a 113% reserve.

2. A memorandum dated October 5 to General Arnold signed by General Gross for General Craig states that we will have 1341 heavy bomber crews in U.K. by the end of October. This memorandum is in General Arnold's Black Book.

3. This apparent discrepancy in statistical data within this Headquarters has come to General Arnold's attention and is not pleasing to him.

4. It is suggested that you do something about it and quickly.

MEMORANDUM FOR COLONEL WILLIAMSON:

General Arnold directed this morning that the question of priorities for the movement of supplies over the hump will be reopened. He wants an air estimate of the situation which will bear down on the fact that the assured movement of the supplies necessary to sustain the air units we have in the Tenth and in the Fourteenth Air Forces is essential to any success on the ground. He anticipates 500 Jap aircraft in Burma within 45 days.

This paper should be addressed to the Chief of Staff and written with the thought in mind that General Wedemeyer will carry a copy of it with him when he joins Mountbatten's headquarters. It is to be a spur to Mountbatten to keep the Air Force requirements in their proper priority in that theatre.

L. S. KUTER,
Brig. Gen., U.S.A.,
Asst. Chief of Air Staff, Plans.

MEMORANDUM FOR MAJOR WILDMAN (THRU COL. WILLIAMSON):

To confirm General Arnold's decisions relative to CCS 323 this date, please prepare for me a directive to the Air Member of the Joint War Planning Committee working on this paper.

I feel that particular emphasis should be placed on:

a. The requirement that great numbers of B-17's and B-24's shall be employed.

b. Primary emphasis on the approach to Tokyo from the Southwest. Secondary emphasis on the approach for bombing of Tokyo from the Marianas. A lesser priority to approaches from Formosa or the Philippines and from the North. A low priority interest in the opening of ports on the China Coast, and an overriding interest in bombing from the Maritime Provinces should the Russian bases become available.

On the last named subject above, I should like to have our plans pulled out and polished up for informal presentation to General Arnold. In this connection, the data on a possible U.S. - U.K. - U.S.S.R. conference should also be touched on.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

15 September 1943

MEMORANDUM TO MAJOR WILDMAN:

Subject: Proposed Test of B-29.

In the test flight to be made of the B-29 on a 1500 mile radius of action operation with ten tons of bombs, it is my desire that the conditions of the test simulate in all practicable items an attack on Tokyo by 100 B-29's from a base in the Changsha area exactly 1500 statute miles distant.

Please have an heavy bombardment expert from OC&R lay out the performance we should have on such a mission.

If the economy of fuel will be materially aided, this attack can be scheduled for delivery at a reasonable hour after first light or before darkness, thus permitting one leg of the flight to be performed in darkness.

Probable land areas which may be held by the enemy on the course of this flight should be estimated and suitable airplane performance requirements set up to simulate the crossing of such areas.

Reasonable allowances for assembly must be included. The speeds set up for this airplane should be reasonable for the performance by the formation leader. We will later interpolate fuel requirements by the last airplane in the formation.

Naturally this test flight must include actual carrying of ten tons of bombs (inert or otherwise) and their release over the simulated objective.

In general, as much practical realism as can be foreseen should be inserted in this first test. The data we obtain from it may greatly influence our planning for the next many months.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

MEMORANDUM TO GENERAL GRANT:

Subject: Over-Work by Air Staff Personnel.

1. In connection with our previous conversations on the over-work in the Air Staff resulting from present limitations in officer strength, and in connection with the inspection we made of this Headquarters at 11:00 PM one recent Saturday night (when we found twenty-two key members of the Air Staff engaged in an all-night program planning job) the following additional data are provided:

a. Major Otis T. Weaver, of the Programs Branch, OC&R, is believed now to be in a psychopathic ward at Walter Reed Hospital as a direct result of over-work.

b. Captain J. S. Lanham, of the Programs Branch, OC&R, is reported to have been taken from his office to a hospital by ambulance in some form of a nervous collapse very recently. Captain Lanham is believed to be back on duty of limited nature, and still under medical observation.

L. S. KUTER,
Brigadier General, U.S.A.
Asst. Chief of Air Staff, Plans.

MEMORANDUM TO COLONEL WHITNEY:

Subject: Strategic Bombing from Mediterranean Bases.

General Arnold decided today that immediate action would be initiated toward the constitution of a Strategic Air Force in the Mediterranean to operate under the control of the [Combined] Chiefs of Staff. He approved in principle the action and composition of the forces set up in the Whitney paper. Please contact Colonel Williamson and Major Wildman and polish your paper up for presentation by General Arnold to the U.S. Joint Chiefs of Staff (after reference to and approval by General Marshall) with the recommendation that the Joint Chiefs present the matter to the Combined Chiefs.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

Copy to Col Williamson

13 September 1943

MEMORANDUM TO COLONEL HAMILTON (THRU COL. LOUTZENHEISER):

General Arnold this afternoon approved in principle the enclosed paper covering U.S. military requirements for air bases, facilities and operating rights in foreign territories. He read and directed the rewriting of Enclosure A with particular reference to inserting enough data that the Air Forces cannot be accused of lacking in vision and foresight.

Please go over the paper doing such rewriting as may at this point appear desirable in view of the foregoing and let me see it in draft form.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

MEMORANDUM FOR THE ADJUTANT GENERAL:

Subject: Loss of Secret Papers.

1. In accordance with Army Regulations 380-5, paragraph 11, change No. 11, dated 11 June 1943, the following report is submitted in connection with the loss of certain secret papers.

2. These papers were lost due to carelessness under circumstances which are to a certain degree extenuating due to pressure of business, newness of personnel and inadequacy of the number of officers available to handle the business.

3. The officer who lost these papers was fully cognizant of the seriousness of the loss and immediately initiated his own investigation to recover them. When this investigation did not succeed, appropriate steps were taken to initiate an investigation by the Air Provost Marshal. (Reference the attached memorandum dated July 7th.) Said investigation has failed to recover the papers, as had a thorough and diligent search in the Air Staff.

4. The officer who lost these papers has been fully appraised of the urgent need to protect with the utmost care all classified material. He is fully cognizant of his responsibilities in this regard and is qualified to insure that protection in the future.

5. It is recommended that no disciplinary action be taken in this instance.

For the Commanding General, Army Air Forces:

F. C. MILNER,
Colonel, G.S.C.,
Air Adjutant General.

2 Incls:

MEMORANDUM FOR COLONEL WHITNEY:

Subject: Ball Bearings from Sweden.

Noted.

If there is a real requirement for these ball bearings or if it is proved that damage could be done to the enemy by our purchase rather than letting them become available to the enemy, one, two, or three C-47's can and naturally will be made available for this purpose. Proceed along the lines indicated in your memorandum of the 11th of September.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

Copy to Col Perera & Gen Meyers for notation.

11 September 1943

MEMORANDUM FOR GENERAL KUTER.

Subject: Ball Bearings from Sweden.

1. A conference was held at the office of Mr. Batt of the War Production Board on 10 September, at which Colonel V. York and Lt. Colonel C. V. Whitney were present.

2. Mr. Batt outlined the ball bearing production situation in the United States, which showed a shortage in production capacity of certain important articles. He pointed out that, due to the labor difficulties in the industry, remedies for this situation were not in view in the immediate future.

3. He then stated that recent inquiries from the Swedish Government had produced the information that Sweden could supply us with the necessary articles, approximately five tons per week, providing that we could supply the means of transporting the articles from Sweden.

4. The Swedish Airlines have had three DC-3 airplanes operating between Sweden and Scotland. This number has now been reduced to two due to an accident to the third airplane. This service is carrying a capacity load of Norwegian technicians and other articles, including ball bearings under arrangements with the British. It is claimed that the proposed additional load of five tons weekly could not be transported with the aircraft now available.

5. Mr. Batt pointed out that, in addition to providing us with these essential articles, the purchase by the United States of these articles would deny them to the enemy.

6. After further general discussion of the problem, Colonel York and Colonel Whitney requested Mr. Batt to supply us with more concrete information concerning the needs of the United States for these particular types of ball bearings with a view to determining more accurately the priority which this project should receive and the likely duration of such air service. Mr. Batt stated that he would supply this information to Colonel York.

7. Colonel York stated that he believed the best solution to this problem would be for the United States to loan two transport airplanes to the British Airline now operating over this route, until such time as the service was no longer required.

8. Colonel Whitney stated that a critical shortag of transport aircraft existed and that very strong arguments would have to be pre-

#30

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

sented in order to divert transport airplanes from active war zones to the proposed service.

Thereupon the meeting terminated.

/s/ C V Whitney,
C. V. WHITNEY

13 September 1943

MEMORANDUM FOR COLONEL LOUTZENHEISER:

Enclosed are four separate papers which General Arnold brought back with him from his recent trip to England. The paper in the folder entitled "Reorganization of U.S. Army Air Forces in the United Kingdom" was carried over and was discussed with Air Chief Marshal Portal who apparently does not approve the idea contained therein. The carbon copy of a directive to the Supreme Allied Commander COSSAC is probably in the same category.

The two photostated charts appear to be extra copies of papers bearing on the same subject and may have been handled in the same manner.

Air Chief Marshal Portal will forward further data on this subject to General Arnold in the near future. All further action by this Headquarters on these subjects must naturally be suspended until General Arnold hears further from the Chief of the Air Staff, RAF.

The letter from General Devers to General Arnold also cannot be answered until further data is made available by General Arnold.

It is desired that your Division be familiar with these papers and hold them for appropriate further action.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of the Air Staff, Plans.

Copy to Col O'Donnell.

THIS PAGE IS DECLASSIFIED IAW EO 13526

11 September 1943

MEMORANDUM FOR GENERAL KUTER:

Subject: Telephone Call from Gen. K. B. Wolfe.

1. On Friday 10 September 1943 at about 11:30 A.M. General K. B. Wolfe called me on the telephone and offered the following information relative to the B-29 service tests:

Wolfe: The extropolation to 40,000 feet and 3,000 miles of the fuel consumption data which was secured in the 2,500 mile cruise at 28,000 feet incident to a cabin pressure test did not provide useful information. Apparently there was some question as to which tanks were full prior to take-off and what the exact volume of the various tanks is.

Wolfe: We have never made a take-off at a maximum gross of 128,000 pounds.

Wolfe: Our maximum altitudes to date has been 31,000 feet. We are going up by increments and have no data yet on operations at 40,000 feet.

Wolfe: I am trying to work out a practical solution to the radius of action problem by actual flight test.

Wolfe: Outlined the factors to be included in the flight tests to determine tactical operating radius:

a. Take off and climb to the rendevous point (probably 250-300 miles).
b. Add rendevous time.
c. Proceed at 40,000 feet to the target area to avoid detection and interception.
d. Allow for high horse power operation for an hour in the vicinity of the target.
e. Return at 40,000 feet to 250 or 300 miles from your base.

#32

THIS PAGE IS UNCALSSIFIED

f. Allow a reserve for firing the airdeome under adverse weather conditions.

Wolfe: The engineers cannot compute worthwhile data from horse power ratings of engines theoretical consumptions of fuel per horse power hour and theoretical fuel capacity. They work out all their problems at best altitudes for economy and are prone to disregard unfavorable factors incident to tactical considerations.

Langmead: Expressed the opinion that if the service test data could not be made available for incorporation in the study due by the JWPC on September 15th that there was no particular urgency in accelerating the service tests.

Langmead: We will have to use your approximation for runway length.

Wolfe: My best guess is that you should use runway lengths as follows:

a. Desired: 10,000 feet.
b. Minimum: 7,000 feet.

Wolfe: We have no precise data on take-off run at 128,000 pounds. We started with 80,000 pounds gross per take-off and have boosted it by increments to 105,000 pounds. The curse of take-off runs looks good. Unless we run into a break in the curve which is not now anticipated the 7,000 feet minimum specified above should be adequate for a take-off with a gross of 133,000 pounds.

Langmead: What does the wing loading work out with a gross of 128,000 pounds?

Wolfe: That runs about 74 pounds per square foot. We have never flown an airplane at that wing loading yet. Hence, we cannot make categorical statements about what we can do in the matter of take-off runs.

E. C. LANGMEAD,
Colonel, G.S.C.

7 September 1943

MEMORANDUM FOR GENERAL ARNOLD:

Subject: Air Staff Participation in next CCS Conference.

1. At the conclusion of the Quadrant Conferences, while the situation was fresh in the minds of all concerned, data was assembled concerning your Staff's preparation for and attendance at the next CCS conference. These data will be retained in this Division and are being used as a guide in our preparation for the next conference.

2. These data are based on our general belief that we had an approximately correct number of Staff officers with us and that, in general, properly qualified individuals were present. These data include naturally several items wherein the actual performance of duty by your Staff can be improved at the next conference.

3. To complete the picture and to be better prepared for the next conference, your instructions are desired on the following points:

a. Was the service you received from your Staff at Quebec basically satisfactory both as to quantity and quality? (If our general belief that your Staff service was generally satisfactory is incorrect - your comments on the different approach or reorientation necessary are requested.)

b. Was the size of your Planning Staff approximately correct? (The Planning Staff, excluding your Personal Staff and the air officers on the Joint Strategic Survey Committee, the Joint Intelligence Committee, and from the theatres (Generals Vandenberg and Hansell), consisted of 9 officers, 1 warrant officer, 2 enlisted men and 1 civilian.)

c. If our representation at the next conference must be reduced, would you be adequately served by a smaller Personal Staff? (Included under the heading of your Personal Staff were the following: Colonel O'Donnell, Colonel Smart, Lt. Col. Petersen, Major Ames, Major McCabe and one civilian.)

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

Copy to Gen. Fairchild.

THIS PAGE IS UNCALSSIFIED

6 September 1943

MEMORANDUM FOR GENERAL KUTER:

Subject: Comments on Organization and Functioning of A.A.F. Planner's Staff at Quadrant; As Basis for Preparations for Next Conference.

1. Personnel.

The personnel of the Air Planner's Staff at Quadrant was adequate in number, and experience indicated that they were appropriately selected as to function. There was an initial acute deficiency in stenographic and typing personnel, which was cured in the middle of the Conference by the addition of Miss Griffiths to the staff.

a. Composition. As ultimately constituted the Planner's Staff consisted of the following personnel:

(1) Assistant Planning Staff.

1 Colonel - Assistant Planner and Executive.
1 Major - Assistant Planner and Briefer.
1 Major - Assistant Planner and Briefer.
1 Warrant Officer - Filing Clerk.
1 Technical Sergeant - Assistant Filing Clerk and Stenotypist.
1 Civil Service Clerk-Stenographer.

(2) Planner's Technical Staff.

1 Colonel - Expert on production, future availability and proposed deployments of air units, combat crews and aircraft. Technical Staff Executive.

1 Colonel - Expert on air logistics, service and maintenance requirements and resources.

#34

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

1 Colonel - Expert on Air Transport Command operations, plans and capabilities.

1 Lieut. Colonel - A.A.F. Statistician.

1 Captain - A.A.F. Intelligence. (At Quadrant this officer not only furnished invaluable direct assistance to the Air Planner's Staff in the preparation and evaluation of intelligence aspects of plans and studies, but supplied substantially all air intelligence estimates required by the air member of the J.I.C., for use of the J.W.P.C. He also was largely responsible for supervising and maintaining the intelligence room which was improvised at Quadrant as directed by the Combined Chiefs of Staff. The Air Planner's cartographer prepared the maps and did most of the posting required for the establishment and maintenance of this intelligence room.)

1 Pfc. - Cartographer and Draftsman.

b. Organization.

In so far as the Planner's Staff was organized and functioned in accordance with the assignment of responsibilities indicated in paragraph 1 a above, it was satisfactory. There was, however, some confusion and resulting lack of coordination in the performance of duties normally discharged by the assistant planners. This was due in large part to the personal limitations and shortcomings of the writer (indicated in paragraph 1 a (1) above), and in part to other circumstances, including the physical arrangement of office space assignments. The Air Planner necessarily spends a greater part of each day attending sessions of the Joint and Combined Staff Planners, and of the Joint and Combined Chiefs of Staff. While not attending such sessions, much of his time is devoted to informal conferences. Meanwhile, there is a continuous flow of official papers to his office, extending until a late hour in the night. Frequently these papers, requiring careful reading, digesting, coordinating and evaluating, are distributed within an hour prior to a meeting of the Combined Staff Planners at which they will be considered. While the Air Planner is attending formal sessions, or engaged in essential conferences, numerous memoranda

THIS PAGE IS UNCALSSIFIED

or calls come from the Combined Planners Secretariat's office requiring immediate action, by way of concurrence, dissent or comment. It is therefore essential that the Air Planner have an executive qualified and authorized to represent and act for him in his absence (except on vital matters requiring the exercise of his personal discretion); who will keep himself fully informed as to current conference developments and the Air Planner's policy relative thereto; who will promptly assign responsibility for each paper coming into the office; will be continually informed as to the work being done by the Planner's Staff, and have it in hand for presentation to the Planner when and as he is available. To the extent that the practical necessities of the situation permit, the "Assistant Planners" should not become involved in the preparation of operational plans and studies, but be kept free for studying, digesting and summarizing the plans, studies and reports continually being received from the Secretariat of the Joint and Combined Chiefs of Staff, the Secretariat of the Joint and Combined Staff Planners, the Message Center, the J.W.P.C., and other sources.

c. Arrangement of Offices and Distribution of Papers.

An ideal physical arrangement would be to have at least three connecting rooms. In the center should be the filing room, where the file clerk and secretaries are located, with the Planner's and Assistant Planner's office on one side and the Technical Staff office on the other side. The Air Planner should receive five copies of all papers distributed. The senior filing clerk should stamp on each paper the date and hour received, and should distribute the five copies as follows:

1 to the permanent file (used by the Air Planner at formal sessions);
1 to the Air Planner's personal basket or folder;
1 to the Assistant Planners; and
2 to the Technical Staff.

The executive officer for his personal reading and study would normally have access to the copy filed in the Air Planner's basket, and would assign responsibility for each paper to one of the assistant planners for studying and briefing. If space can be made available, the Technical Staff should have two rooms, one for the Availability, Logistics and A.T.C. officers, and one for the Intelligence and Statistical officers.

d. Clerical Assistants.

The work of the filing clerk and the stenographic assistants necessarily (like that of the officer personnel) extends over long hours,

frequently throughout the night. It is therefore essential that systematic provision be made for reasonable relief of those engaged in these duties. The filing clerk must have relief at meal time, and during hours reasonably required for sleep - and should have a brief period each day for air and recreation. Hence there must be at least two persons qualified to handle the files. During rush periods at least two, and sometimes three, stenographic assistants are critically needed. The stenographic pool may ordinarily be counted on for some help. Two full-time stenotypists or stenographer-typists are the minimum for the Planner's regularly assigned staff, and three could be used to advantage, to permit relief during meal time, for requisite sleep, and a minimum period reasonably required for fresh air and recreation in order that normal efficiency may be maintained. If at all practicable, a separate stenographer-typist should be provided for the Technical Staff. The members of this staff invariably have numerous lengthy tabulations to be prepared under stress of urgency.

2. Pre-Conference Preparations.

a. Agenda.

(1) The work at Quadrant was greatly facilitated by a tentative agenda which had been prepared well in advance of the Conference, and by papers which had been prepared on each subject appearing on the tentative agenda. Prior to the next conference every effort should be made to reach a definite agreement with the British, at least one month before the beginning of the conference, as to the subjects to appear on the agenda, and the sequence in which they will be considered, with necessary provision for such unavoidable subsequent modifications or additions to be made by combined action. The British and American Planners should exchange studies on each subject as rapidly as such studies can be prepared after it is apparent that the subject will appear on the agenda, all such papers to be exchanged at least ten days prior to the beginning of the conference. Substantially this arrangement was attempted prior to Quadrant, but was only partially accomplished. Such an arrangement would allow more time for deliberate consideration of the agenda subjects by the Combined Chiefs of Staff during the conference, with the assistance of their Planners, and would greatly enhance the likelihood of satisfactory conclusions being reached. It is inevitable that new subjects for discussion, or new aspects of agenda subjects, will arise during the conference. Hence the requirement for the Planner's Staff, notwithstanding the advanced planning and preparation recommended in this paragraph.

(2) The number of subjects on the agenda should be held to an absolute minimum, and consist only of such subjects as can not be

THIS PAGE IS UNCALSSIFIED

appropriately and satisfactorily disposed of by normal (interconference) C.C.S. procedure. Conference periods are always rather rigidly limited as to duration. A lengthy agenda necessitates hurried action and does not permit the desirable deliberation, with opportunities for appropriate exchange of thought between the Planners and their Chiefs, which should characterize proceedings for the solution of questions of such gravity and importance as to justify, for their solution, the calling of a conference between the heads of the Governments and their chief Military and Naval advisers.

(3) Before placing an item on the agenda it should be definitely ascertained that the respective Chiefs of Staff are fully prepared to discuss the subject, and to take appropriate action thereon. At Quadrant such action as was taken on matters concerning the war with Japan was, for the most part, based upon a report received after the conference convened from the India-Burma Theater, and upon the broad plan for the defeat of Japan which was completed immediately prior to the meeting of the conference. "Progress Report on POINTBLANK," "NOTEBOOK," "BULLFROG," and "SAUCY" were among items appearing on the Quadrant agenda which were not adequately dealt with, if at all, apparently because there was no pre-conference meeting of minds as to readiness of the conferees for discussion of these items.

b. Orientation of Planner's Staff.

At least a week prior to the conference the Planner's Staff, including technical advisers, should be assembled for a discussion of the agenda, and a clear assignment of duties and responsibilities. This procedure was planned prior to Quadrant, but was largely prevented by operational planning in which members of the Staff were engaged during a period of ten days prior to the conference. The Planner's Conference Staff, including the technical advisers, should be relieved of all other duties, except those involved in preparations for the conference, one week prior to the convening of the Conference. During this period, as at all others, every effort should be made to avoid the assistant Planners becoming involved personally in the preparation of outline operational plans, appreciations or studies. This is desirable in order that they may devote their entire time to thorough study, analysis and criticism of plans, appreciations and the studies being produced by other agencies, requiring action by the Joint and/or Combined Planners. Circumstances may arise, as occurred prior to Quadrant, making it unavoidable that the Assistant Planners become involved in such work, but it should be limited as much as possible.

c. Firm Data on Availability and Deployment.

At Trident and at Quadrant the A.A.F. Planner and his Staff were handicapped by the fact that on each occasion the A.A.F. unit

THIS PAGE IS UNCALSSIFIED

production and deployment schedules and Tables of Organization were in the course of being revised; and there was no source of firm data as to future availability of aircraft (by type), combat units or combat crews. Prior to the next conference specific attention should be devoted to this matter, to the end that the Planners may go to the conference fortified with authoritative data on availability of aircraft, combat units and combat crews and deployments, extending at least one year beyond the conference period.

4. Conference Schedule.

The schedule for meetings adopted at Quadrant is believed to be as satisfactory as can be arranged. Reference is made particularly to the scheduling of Combined Chiefs of Staff meetings in the afternoon of each day. This permits performance during the hours of the night of the clerical work necessary for the preparation of the minutes of the C.C.S. meetings; and for the preparation of plans and studies necessitated by decisions made in the C.C.S. meetings. The Joint and Combined Staff Planners are thus able to assemble during the morning and consider work that has been produced during the previous afternoon, evening and night; and pass it on for consideration by the Combined Chiefs of Staff at their afternoon meeting.

5. Contact of the Planner with his Staff.

At Quadrant the attendance of the Air Planner at formal sessions of the Joint and Combined Chiefs of Staff and of the Joint and Combined Planners, and at numerous informal conferences, prevented the frequency and extent of contact between the Air Planner and his Staff which is believed desirable for the purpose of giving the Planner the full benefit of the work done by his Staff, and giving his Staff the desirable extent of guidance from the Planner. It is suggested that special effort be made by the Planner to work into his routine daily schedule at least one 30-minute conference with his Staff; also brief conferences preceding and following each formal session, as was done at Quadrant.

ADRIAN WILLIAMSON,
Colonel, G. S. C.,
Chief of Joint and Combined
Chiefs of Staff Subjects Division.

9/6/43

MEMORANDUM FOR GENERAL ARNOLD:

Subject: Air Staff Participation in next C.C.S. Conference.

1. At the conclusion of the Quadrant Conferences, while the situation was fresh in the minds of all concerned, data was assembled concerning your Staff's preparation for and attendance at the next C.C.S. conference. These data will be retained in this Division and are being used as a guide in our preparation for the next conference.

2. These data are based on our general belief that we had an approximately correct number of Staff officers with us and that, in general, properly qualified individuals were present. These data include naturally several items wherein the actual performance of duty by your Staff can be improved at the next conference.

3. To complete the picture and to be better prepared for the next conference, your instructions are desired on the following points:

a. Was the service you received from your Staff at Quebec basically satisfactory both as to quantity and quality? (If our general belief that your Staff service was generally satisfactory is incorrect - your comments on the different approach or reorientation necessary are requested.)

b. Was the size of your Planning Staff approximately correct? (The Planning Staff, excluding your Personal Staff and the air officers on the Joint Strategic Survey Committee, the Joint Intelligence Committee, and from the theatres (Generals Vandenberg and Hansell),

#35

consisted of 9 officers, 1 warrant officer, 2 enlisted men and 1 civilian.)

c. If our representation at the next conference must be reduced, would you be adequately served by a smaller Personal Staff? (Included under the heading of your Personal Staff were the following: Colonel O'Donnell, Colonel Smart, Lt. Col. Petersen, Major Ames, Major McCabe and one civilian.)

L. S. KUTER,
Brigadier General, U. S. A.,
Assistant Chief of Air Staff, Plans.

Copy to General Fairchild
with request for his comments.

THIS PAGE IS DECLASSIFIED IAW EO 13526

1.

3 Sept 1943

Gen. Kuter:

Col. Rosenblatt gave an informal dinner party for Col. Irvine in the Chinese Room of the Mayflower on August 24th. He wanted you and Mrs. Kuter to attend. I "regretted" for you and Mrs. Kuter - stating that you were out of the city for a few days.

Lt. Fletcher of the Navy called twice. He had a message for you from Lt. Col. Eugene Fletcher (his brother). In his call of 30th of August, he stated that he was sorry that he did not get a chance to see you before he left for Africa. He expects to be back in two or three months and hopes to see you then.

Mr. Kip Ross, of National Geographic Magazine, called 8/25/43. He wishes an appointment to take your picture by the big map in your office to be used in their magazine. (DIstrict 3330, Ext. 288)

Maj. Gen. Del Dunton was in the office to see you on Thursday, 2nd September. He would like for you to give a 1-hour talk on October 4, at the Air Service Command at Dayton. He will write you a letter about this.

General Eubank dropped in to see you about 18th of August. He left no message.

Maj Gen W H Hale, and 6 officers from the 7th Air Force, came in on 12th of August - made your office their headquarters. They departed on 31st of August.

Mr. Lovett is going to have meeting on Tuesday, Sept. 7th, at 2:00 PM, in Gen Arnold's Conference Room, on Army Air Forces Program - he would like you to attend.

D.N.S.
D. N. S.

Minutes of Conference held 13 August 1943 re Post War Planning

Officers Present:
- Colonel F.G. Allen (Presiding)
- Colonel F. Hamilton
- Colonel J.G. Hopkins
- Colonel Miller (of Col. Davison's office)
- Major F.S. Leland

Allen: I called this meeting because it became apparent to me that there were several people in Plans Division working on post-war planning and post-war air force, and also learned that there was not only a directive from General Arnold affecting this subject, but also a request from Col. F. Trubee Davison that was related to the same matter. I have asked Col. Miller of Col. Davison's office to sit in with us and tell us what he knows about it from Col. Davison's angle, and I have also acquired a paper prepared by Hopkins that has attached as enclosures to it a number of papers that are very pertinent to the subject that we are considering. This paper that I mentioned that Hopkins worked on was submitted on the 12th of August. The subject was International Aviation. However, the paper was not made up in chronological order so I spent considerable time deriving a chronology. I believe that Hamilton has also worked on a chronology that might be a little more complete than mine because mine has been made up solely from this paper of Hopkins. I think it would be helpful if we reviewed the chronology on Hopkins' paper and then considered the problems that Col. Davison is dealing with. This chronology does not tie in with anything. There is no relationship between this and the work Davison is doing. There are two different lines of thought. However, there is an indirect relationship between them so let's consider this chronology which I believe is what started a lot of the work that Col. Davison is doing right now.

Col. Allen read the 29 January 1943 chronological item.

Allen: These are present and future rights which might be interpreted to go beyond the date of the war.

Col. Allen read the 1 March item.

Hopkins: The purpose of this was what?

Allen: Recommendations on matters pertaining to post-war aviation.

Hopkins: To try to formulate a national policy on aviation with a view to presenting it to the Secretary of State and then to the President for its adoption.

#36

THIS PAGE IS UNCALSSIFIED

Hamilton: At the request of the Secretary of State, an informal International Committee on Aviation has been considering this matter with particular consideration to the airfields in the different parts of the world. The main committee is merely an informal committee formed by the Secretary of State. It has, in turn, formed several subcommittees and delegated to these subcommittees certain specialized and technical matters.

Hopkins: I wanted to be sure the reason for all of this is to evolve a policy.

Allen: Sometime between the 2nd of March and the 10th of March, the matters covered by this subcommittee report were referred to the War Department. There is nothing in this paper that shows how that happened but it resulted on the 10th of March in OPD sending a memo to Mr. Lovett.

Hamilton: What happened was the International Committee referred the subcommittee's report to the JCS with a request that the JCS render an opinion on its military aspect. The JCS turned it over to the Joint Strategic Survey Committee to advise them. The JSSC sent it back to the JCS stating that they could not intelligently act on it until they had the War and Navy Departments' views.

Allen: That happened on the final report?

Hamilton: The only reports that are available. There are two - one is a preliminary report. The other is proposals from the subcommittee for consideration by the principal committee.

Allen: One was adopted on March 1 and the other on June 19th. I was talking about the one of March 1st. That went through this "rigamarole" that you just outlined. I know that the June 19th report was sent to the Air Forces, but was the first report ever submitted to the Army Air Forces?

Hamilton: Submitted to the General Staff through OPD. That brought about the memo from OPD.

Allen: That was March 10th. OPD sent memo to Mr. Lovett.

Col. Allen read brief of this memo.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

Allen: That was to prevent any commitments by the United States and Great Britain at the present time. I am of the belief that any commitments arrived at might hinder the war effort.

On the 11th of March, Mr. Lovett in a memo to Mr. Berle submitted comments on the preliminary report and he embodied some of these recommendations of OPD.

Col. Allen read these recommendations.

Allen: In other words, if we could obtain exclusive base rights in the Western Hemisphere, we should make every effort to do so. (This comment had reference to the first two recommendations.)

(With reference to recommendation No. 3) I believe Mr. Lovett envisaged situations where we would desire to keep a more or less secret or military base that would not be used by commercial interests. That, of course, cannot be determined until a further study has been made.

Col. Allen read recommendation No. 4.

Allen: That is, the subcommittee report made some remark about guaranteeing at least two schedules a week. Mr. Lovett felt that we should not commit ourselves if the parties concerned were not interested.

Col. Allen read recommendation No. 5.

Allen: Here again he mentioned those two stops a week. I believe that he was thinking of two stops a week at the bases which are Panagra, Antigua, Saint Lucia and Trinidad - which would involve a total of 8 stops a week in the Caribbean and would tend to overemphasize the importance of the Caribbean while it is actually nothing but a stepping stone on the route to South America or Africa.

Col. Allen read recommendations No. 6 and 7. Then he read the item for 16th of March.

Allen: (With reference to item of March 16) This paper later became 183/4, I believe. The JCS believe that the objectives would promote ......

(1) Defense of the Western Hemisphere

(2) We should obtain landing areas and facilities .... of the U.S. air component of an international police force if such a thing exists.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Leland: In that connection, Col. Halversen was on a subcommittee working on the international police force. They were finally put out of business and somebody else took over.

Allen: In connection with this international police force, Admiral Leahy said we should obtain bases on the three air routes across the Atlantic - route across the North Atlantic, across the South Atlantic and I presume the other route is across the Central Atlantic (from the continent to Bermuda to the Azores to Europe).

Col. Allen read the item for 19th of June.

Allen: I have not had a chance to read thoroughly both of these reports - March 1st and June 19th. The March 1st report was considered a preliminary report and the June 19th was the final report.

Hamilton: The second report is apparently a result of a completely separate report.

Allen: Do you consider that the second report supersedes the first report?

Hamilton: The two of them have to be considered together. One does not complete the other.

Hopkins: How do you arrive at that?

Hamilton: By the fact that they have been handled completely separate. Mr. Berle sends both of them back to the General Staff. Each one enclosed a report. One enclosed a preliminary report and the other proposals for consideration. He asked that both be studied by JCS and their comments be forwarded to the principal committee for their consideration. The JCS turned them both over to the JSSC - the one with action recommended was sent back to the Interdepartmental Committee - and the other was forwarded to the War and Navy Departments.

Col. Allen read the items for 29th and 30th of June.

Allen: This preliminary report on United Nation airport authority, is that the same report as this preliminary report on 1st of March?

Hamilton: That is still another.

Hopkins: They extracted part of it and sent it through separately for study.

THIS PAGE IS UNCALSSIFIED

Hamilton: This deals solely with airport authority and subsequently acquired the number of JCS 405.

Allen: That was an international concept of our own local civil airport authority.

Miller: It isn't as broad in scope as the preliminary report.

Allen: That subject was discussed in one of these reports. The June 29th report discussed that.

Hamilton: The airport authority report which was forwarded by Mr. Berle on June 30th was actually adopted by the subcommittee on June 11th. You can see where it ties in with your chronology.

Col. Allen read items of 7th, 8th and 9th of July.

Allen: We didn't ask ATC to sit in on this meeting because we wanted to consider the purely military aspects of the problem and I believe that the transport requirements will be dependent upon the strategic requirements. Now there is another thing that parallels this that Major Leland is working on. This is an R&R that came down from Trubee Davison requesting a study by Plans. Part B is tied in with the directive that Hamilton is working on. In other words, Hamilton's answer will be the same thing that Leland is trying to get.

Hamilton: Yes, I think it should be. My report deals with the physical air bases and facilities.

Allen: If that is the case, then it appears that your study will be contingent upon Leland's findings.

Hamilton: It does to a certain extent.

Allen: We want to limit the discussion right now to after the war. We can't do anything on the deployment of the Air Forces to beat Japan until after the Quadrant Conference. Only thing that we can talk on is the post-war Air Force and its deployment.

Leland: Here's my deployment, except that we didn't attempt to deploy the groups of the post-war world.

Hopkins: You didn't deploy them on bases.

Leland: I don't see how in the world you can possibly deploy them.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Allen: That is the problem we are faced with right now.

Leland: There is just no firm basis for deployment at this time.

Allen: The deployment of the post-war Air Force is contingent upon the foreign policy of the United States. At this time if we decide on a desired deployment, that in a way will tend to dictate the requirements of our foreign policy.

Hamilton: That is something that General Arnold has in mind in this R&R - that no comprehensive military policy has yet been formulated. We want to get the Air Force - what it would like to have exist as an Air Force after the war - before the JCS so that they in turn will take that into consideration.

Miller: The combining of it is going on in the JCS. They have tentatively set up 105 groups.

Allen: As I see it, General Arnold's directive and Col. Davison's request in paragraph 3 b of his R&R are merely two different wordings of his problem.

Hamilton: They are interrelated definitely. Mine is a question of purely geographic locations of the overall strategic concept requirements.

Allen: You are going to determine the areas in which we have specific interest. Your study is contingent upon Leland's study and I believe the approach should be along these lines - Leland to determine the constitution and general deployment of the post-war Air Force - he would do this by general areas - so many groups of a certain class would go into North Africa - then when he determines this strategic deployment, you tell him where the bases will be or what bases will be used for this deployment. Part A of Leland's problem is the number and type of groups and their deployment necessary for the defeat of Japan and garrisoning Europe. That also is involved in General Arnold's directive in a way.

Hamilton: General Arnold's stipulations were for the future requirements. He refers in his preamble all along to the possible post-war situation arising out of the bases that we have got money invested in. It is a very complicated subject. From the whole context of the thing, I think that the General is interested in presenting to the JCS the Air Force requirements on its ultimate reduced basis to protect the national security.

THIS PAGE IS UNCALSSIFIED

Allen: It is desirable that you and Leland work jointly on this and turn out one solution - one paper that will satisfy Davison's requirements, as well as General Arnold's requirements. The two are so closely related. If they are considered separately they will result in too much confusion.

Six months after the defeat of Japan OPD envisaged an Air Force of 105 groups deployed generally 25 groups in the Pacific, 30 in Europe and 50 in Continental United States and its possessions. You are working on our military requirements. You have a requirement for deploying 55 groups outside the Continental United States - that is, Leland does. That is going to require bases and facilities which are going to govern his study - Hamilton's study. It is going to be one of the factors in consideration in arriving at your answer.

Hamilton: It can't do more than that. It is to be prepared in the form of a staff study for General Arnold's signature, including a draft paper for presentation to the JCS. It has got to embody not only our own deployment but again the possibility in the United States deployment of an international police force.

Allen: In your consideration, are you going to include any commercial requirements?

Hamilton: Not if I can help it. But inevitably you can't go into this second question without inevitably falling into the commercial aspect. The rights of operation bring in the commercial aspect.

Leland: I don't see any firm basis for making a deployment for post-war.

Allen: I think that they have to be deployed in accordance with an assumed foreign policy and we are going to have to assume that the United States, England, Russia and China - the Big Four that are fighting this war - are going to ally themselves in a post-war alliance for the protection of our mutual interests throughout the world and in order to preserve peace. That is going to have to be a basic assumption that will affect you as well as you. In one of these papers - the 19th of June report of the subcommittee - they couldn't excape mentioning those three nations that we would have to have some sort of agreement with. But, that is a matter of foreign policy. The State Department is responsible for that. I believe that you will have to proceed on a basis of the Big Four alliance for maintaining peace in the post-war world. Then in order to evaluate

THIS PAGE IS UNCALSSIFIED

the amount of help that we might obtain from one or more of our Allies, it will be necessary to divide the world up in strategic spheres and these spheres will be selected by reference to the interest that the Big Four have in those spheres and we can set those down right now, I think. First of all, you take the Western Hemisphere and we can conclude right away that no one but the United States is going to have anything to do with the Western Hemisphere - it is a sphere of United States interest. Second, Europe in which both England and Russia are intimately concerned. The Middle East, in which both England and Russia are intimately concerned. Down through India, in which both England and Russia are intimately concerned. So far as England and Russia are concerned, Europe, the Middle East and India form a strategic region of national interest. Africa is of concern to Britain and the United States and both of these powers would have commitments of one form or another in Africa after the war. Southeast Asia to include Burma, Thailand, French Indo-China, the Malay States, is an interest of China and England; and for that reason, I am trying to set aside areas in which we might deploy groups. There is the Western Pacific in which the United States, China and Russia have important commitments. There is the Southwest Pacific in which England is interested and I am doubtful if the United States has any interest in the Southwest Pacific. It is hard to define these areas exactly - only rather generally at this stage. The South and Southwest Pacific could be loosely grouped into a strategic area in which both U.S. and England have interests. The Central Pacific in which only the U.S. has strategic interests. The only other two strategic areas of the world are the Arctic and the Antarctic, and I doubt if we would have any groups deployed in either of these two places - certainly not the Antarctic. The Arctic is of strategic importance as far as the future is concerned - when we get those 4,000 mile airplanes. Now in these strategic areas in the world wherever the U.S. maintains an interest, it appears to me that we also would maintain Air Force units and I think that can serve as a guide in formulating the plan for the composition of the post-war Air Force.

Leland: What about Arctic bases?

Allen: You mean Greenland, Iceland and all the rest of them?

Hopkins: They have been classified in the Western Hemisphere.

Allen: Hasn't the President and Mr. Lovett included them in the Western Hemisphere? Bermuda is Western Hemisphere. All of the Caribbean

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

bases in Western Hemisphere. So far as I know, we have no written contract governing our forces in the Galapagos but that is the keystone of the basic defense of the Panama Canal.

Leland: We ought to get all of these islands in the Atlantic and Pacific at a peace conference.

Allen: Another thing in studying the strategic aspects of the post-war Air Force, I strongly recommend using this Polar projection of the world as your basic map rather than anything else.

Another thing, the areas of power of the world are relatively few. There are only three big power areas - one is the United States - the other is Central and Eastern Europe - and the other is the China-Japan area. On a Polar projection these areas form a triangle and in the world of the future, I believe that a great deal of the air commerce will be directed between the corners of this triangle. That will have to be considered with the access of bases in the vicinity of these areas.

The war seems to start over who is going to control these areas of power.

Another thing that should be considered in the solution is the pattern of the ocean trade lines because even in the idea of air power the bulk of commerce will move by the ocean trade lines because it is the cheapest. We must not only protect those lines but control. Miller, do you have anything to add?

Miller: I believe that everybody here understands our place in writing this directive which is so that we can get all other Divisions of the Air Staff planning on demobilization problems. MM&D are vitally interested in the type and quantity of supporting material that are going to be required as of the defeat of Germany and as of the defeat of Japan and then of course in the post-war Air Force. In order that they can do any type planning which they must do right away on account of the civilian problems as well as others, we have to have a starting point and it is this starting point in any plan on which they can start their thinking. It is up to us to get it from you and furnish to them.

Allen: Do you understand that any plan from this Division following the defeat of Japan will have to wait until after the Quadrant Conference so that the only thing that we can work on right now is the post-war Air Force?

THIS PAGE IS UNCALSSIFIED

Miller: Yes. You are taking as a basis the 105 groups. Didn't we have representation when they decided upon that figure?

Allen: Don't know how the figure was derived.

Hamilton: It originally stems from OPD.

Allen: The place where I saw this 105 groups was in a memo from General Thoupkins who is Director of the Special Planning Division of the War Department General Staff. He outlines two periods - periods are six months after defeat of Japan and eighteen months after completion of hostilities in Europe. He has a deployment of 105 groups. General Arnold says we will have a 273 Group Program right up until the peace table.

Miller: That is what the Special Planning outfit is being guided by.

Allen: I think everyone has a general picture of the problems involved and the part that each is playing in it so we might as well conclude this conference.

Chicago, Illinois

Dear Mrs. Collins,

General Arnold's temporary absence from the city precludes his reply personally to your letter of August 9.

I am happy on his behalf to state that the Army Air Forces is most agreeable to the appointment of Mrs. Kuter as it's representative on the Magazine Staff and Executive Committee of your organization. Her charm, her ability and her interest in your work admirably qualify her for the appointment. I am confident that her association with you will be a happy one.

Sincerely yours,

BARNEY M. GILES
Major General, USA
Chief of the Air Staff

General Henry H. Arnold,
Commanding General Army Air Forces,
War Department,
Washington, D. C.

Dear General Arnold:-

Mrs. Arnold, with whom I discussed the subject of this letter last week in Washington, suggested that I put it in writing for the files.

It would lend dignity and authority to the woman chosen to represent the Air Forces on our magazine staff and executive committee if you could appoint her personally. We should like very much to have Mrs. Lawrence Kuter act in this capacity if you concur in our choice. She is extremely well fitted and is seriously enthusiastic and practical in her approach to the problems involved.

We shall be eager for your reply. May I take this opportunity to thank both you and Mrs. Arnold for your understanding and vigorous cooperation in this work we are trying to do?

Sincerely and gratefully,

"HHA"

Dorothy:

Mrs Adams suggested that there is no hurry to reply to this request — that she will let us know if the "heat" is put on. She thought that since it was not a matter requiring General Arnold's personal attention he was "pulling General Kuter's leg" a bit re his wife's affairs. An appropriate reply is in order sooner or later — to be written perhaps by General Kuter — upon his return? In the meantime I have prepared a reply for General Giles' signature (in the absence of General Arnold) if you think it can and should be made.

MEMORANDUM FOR GENERAL GATES:

I have tried to get in touch with you all morning on two subjects:

1. My sincere congratulations for your organizational masterpiece with the Chief of the Air Staff yesterday. I believe that action should have more to do with sound Air Force actions and winning this war than any Staff action I have seen for many months.

2. On further thought, the requirement for "Peter Rabbit" presentation of the detailed program becomes more and more important. Please put your weight behind it.

Best wishes to you. Will try to win the war on the higher levels.

Joe Loutzenheiser has all the dope and is carrying the flag.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

LSK/DNS

10 August 1943

MEMORANDUM FOR THE CHIEF OF AIR STAFF:

Subject: War Against Japan.

1. Current conventional planning concludes that the air war against Japan cannot be launched until 1947, due to many factors, most of which are logistic in nature.

2. If Germany collapses in 1944, we can carry the air war to Japan in 1945 (rather than 1947) with the 28 B-29 groups if, and only if, we provide the great bulk of their fuel and bomb supplies by air.

3. By that time, our monthly output of heavy bombers may be in the nature of 1,000 per month. An adequate effort to utilize those aircraft (particularly B-24 type) to sustain the B-29's in China has not been made.

4. It is appreciated that the B-24 would be an expensive and inefficient aerial tanker. However, we will have great numbers of B-24's. If it is possible that their uneconomical use might terminate the war with Japan two years earlier, the extravagance in the use of a B-24 as a tanker is a trivial matter and not worth further consideration.

5. Aside from bringing the war with Japan to a successful conclusion two years earlier, our negligence to exploit all possibilities could result in our losing the war with Japan. As the situation now stands, we can deploy only a fraction of our Air Force during the two and one-half years between the collapse of Germany and initiation of the air war against Japan. It is quite possible the great American public could not endure the necessity to largely demobilize our Air Force after the defeat of Germany and then to endeavor to recall to the service the majority of the previously demobilized personnel and industries to fight the Japanese.

6. It is recommended that a Secret Security directive be forwarded to the Assistant Chief of Air Staff, OC&R (with a copy to MM&D) substantially as follows:

As a matter of urgency, extensive tests will be initiated immediately to determine the practicability of using the B-24 or the B-17 type airplane as an aerial tanker. Data will be obtained without

#40

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

delay as to the practicability of stripping these aircraft and loading the stripped airplane with aviation gasoline. Rubber tanks in the nose, wings, bomb bays, radio compartments and tail section are envisaged."

7. In my absence, further comment on this subject may be obtained from Colonel Loutzenheiser or Major Burgoyne.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

9 August 1943

MEMORANDUM FOR THE COMMANDING GENERAL, ARMY AIR FORCES:

Recommend that a Secret Security directive substantially as follows be transmitted to the Assistant Chief of Air Staff, OC&R:

It is the belief of the Air Plans Division that Japan may be defeated in 1946, only if large numbers of B-29's and B-35's can be operational in the face of final desperate Japanese opposition.

The failure of the Army Air Forces to provide such a force will surely extend the war with Japan at least one year and if foreseeable internal American discords and uncertainties increase, could result in our losing the war with Japan.

The Plans Division believes that desperate Japanese opposition, over Tokyo at least, may well include planned heroics on their part. At least the B-35 must, therefore, be designed and armed to prohibit destruction by planned collision. The basic consideration in the armament of at least the B-35 type airplane should be reoriented to assure the disintegration of hostile aircraft before planned collision could be effected.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

MEMORANDUM FOR MAJOR D. S. BLOSSOM:

Subject: Bolivia

1. I talked to Colonel Ringgold and asked him to send us a ticket stating that there was or was not reason to play with the Bolivians. Unless he says that we should not deal with them, sympathetically, please discuss with Training and have a reply prepared for General Arnold's signature.

2. I suggest that the letter include the usual trite, on Pan-American harmony - a statement (a broad one) that we will undertake the major reorganization necessary to train these thirty-two Bolivians (all of whom we will expect to speak perfect English) - that no expanse, effort or pain will be spared, etc. To keep this matter out of General Arnold's hair in the future, it might be well that you have his first letter state that General Perrin, General Harper, Major Braga, or anybody not in his office or this Division will act for him on the arrangment of all details in this vastly important project.

L. S. KUTER,
Brigadier General, USA.

MEMORANDUM FOR GENERAL ARNOLD

SUBJECT: Collaboration between the Activities of the Ministry of Economic Warfare and the Committee of Operations Analysts.

1. The Ministry of Economic Warfare through Colonel Vickers, V.C., has expressed the desire to make available, at its own expense, to the Committee of Operations Analysts here in Washington, certain of its key employees together with leading British engineers and industrialists with specialized knowledge of the Far East. Under your directive of March 23, 1943, the Committee is now engaged in an examination of the sustaining sources of the enemy's military strength in this area.

2. It has been proposed that these experts work with the various subcommittees of the Committee of Operations Analysts and that the MEW and RAF make available all information in their possession to the relevant subcommittees.

3. The proposal of the MEW will have the following desirable results:

a. It will centralize and unify in the Committee here that economic analysis which is essential to the selection of strategic targets.

b. It will make available here, in one combined operation, the resources and judgment of the best British and American economic authorities.

c. It will make available here additional sources of information.

4. It is recognized that it might be inadvisable for the individuals in question to become acquainted with our ultimate target objectives or bombardment plans. In order to avoid any

6 August 1943

MEMORANDUM FOR GENERAL ARNOLD:

Subject: Strength of G.A.F.

1. In J.C.S. this morning, you objected to a J.I.C. paper which stated among other things that there were 1400 German aircraft in the Mediterranean area and that Germany had an upward trend in production, particularly in fighter type.

2. The numbers given were the best American-British data at hand when the paper was typed. Those numbers will be corrected showing a slight increase on the Western Front and in Russia, and a decrease to 1128 German aircraft in the Mediterranean. However, production of operational types for January, March and July showed a marked increase (1250 - 1400 - 1640 airplanes respectively).

3. The paper in question is Staff advice to the Commanders. I cannot subscribe to putting in that paper any advice which cannot be supported. Consequently, this particular paper will not be rewritten in the manner in which you expect.

4. It is very clearly the prerogative of the Commander to throw that advice away and place any figures which he may choose in a command paper.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

6 August 1943

PROPOSED DRAFT OF REPLY TO MR. SEVERKY'S LETTER OF 30 JULY

Dear Mr. Severky:

Thank you for your letter of 30 July 1943 transmitting a reprint of your article "WANTED: TRUE AIR STRATEGY" published in the May 1943 edition of "THE AMERICAN MERCURY". The article was well presented and I enjoyed reading it.

As to the course and duration of the war--who can say by what means or combination of means and at what time all our enemies will be vanquished. We can but apply to the best of our ability the means available to us and hope that the victory we are certain to achieve is not too far distant.

Of one thing I am certain, that as the war progresses, greater emphasis will be placed on the production and employment of those weapons which through experience are deemed best suited to defeat the enemy quickly and decisively.

Meanwhile, all Branches of the Armed Forces must perforce make such long-range plans as will meet and overcome all possible contingencies. Not to do so would compromise the national security.

The patriotic motive prompting your letter is appreciated.

Very sincerely,

#45

MEMORANDUM FOR THE COMMANDING GENERAL, ARMY AIR FORCES:

Subject: Aircraft at Quebec.

1. In your name this date, I dispatched a B-25 and crew to Quebec in response to a suggestion by General Deane.

2. This airplane and crew will remain at Quebec and will operate under the control of Colonel McCarthy who is the War Department advance agent.

3. For security reasons, our Provisional Headquarters Flight (Major Edwards commanding with ten to twelve operations and administrative enlisted personnel from Bolling) will not move up until Sunday, August 8th.

4. This business is being handled through General Deane, as the R.C.A.F. is not yet in the picture.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

#46

Additional Joint War Planner.

Assistant Chief of Air Staff, Personnel. Wtn 8/3/43

Assistant Chief of Air Staff, Plans. 1

LSK/dns/5833

1. For proper representation on the Joint War Plans Committee, the Army Air Forces must provide one additional planner.

2. It is appreciated that the stock of officers of the calibre of our present Joint War Planners is exhausted. It is believed, however, that there are among the officers being returned from the combat theatres, individuals who would become able planners. It is requested that an additional officer be provided for this assignment.

3. While the Joint War Plans Committee cannot be considered a "training ground" because of its very great importance to the Joint and Combined Chiefs of Staff, it is, nevertheless, our top "Army-Navy-Air Staff College". The officers now on duty in that Committee should not be expected to spend the rest of the war on that very heavy assignment. The establishment of a policy governing our personnel on the Joint War Plans Committee would be appreciated.

L. S. KUTER,
Brigadier General, U. S. A.

Director of Management Control.

Assistant Chief of Air Staff, Plans.

1

LSK/dns/5833

1. Sometime ago the Joint Chiefs of Staff decided that the Joint War Plans Committee should have three officers as military secretaries.

2. The Navy has provided a young officer who was a former Rhoades scholar. The Army has provided a very able young officer. The Army Air Forces have provided no one.

3. It is desired that you add this requirement to the manning table for this Division and through the Assistant Chief of Air Staff, Personnel, obtain a suitable officer for this assignment. Military background experience would be desirable but alertness, reliability, energy and a high order of intellect are mandatory.

L. S. KUTER,

3 August 1943

MEMORANDUM FOR THE COMMANDING GENERAL, ARMY AIR FORCES:

Subject: Radical Air Plans to Defeat Japan.

I. Discussion.

Ordinary military (and air) thinking may miss some opportunities in planning to apply the staggering amount of air power which may be available to defeat Japan.

II. Action Recommended.

That the Director of Management Control be instructed to call into Washington Mr. Alex Seversky, Mr. Bill Ziff, Mr. Al Williams and other avowed civil air power experts, swear them to secrecy, present the situation as of early 1945 to them, have them proceed to some office layout outside of Washington (Maxwell Field, for example) and after about two weeks obtain from them a purely air plan or plans to defeat Japan without the limitations of practical realities as seen by conventional planners. The plans or ideas which might germinate from this action would then be examined by the Air Staff and the Joint War Planners for practical possibilities.

III. Concurrences.

The foregoing has been discussed informally with General Fairchild who concurs.

L. S. KUTER,
Brigadier General, U. S. A.,
Assistant Chief of the Air Staff, Plans.

MEMORANDUM FOR ALL OFFICER PERSONNEL, PLANS DIVISION:

Subject: Commitment to transfer medium bombardment group to India.

There is a widespread belief that General Arnold has a commitment to transfer a medium bombardment group, and possibly a heavy bombardment group, from North Africa to India in the third quarter of 1943.

This subject has been discussed by the Combined Chiefs of Staff but they have decided that no such action would be taken.

All concerned are hereby informed that there is no agreement, desire or intention to effect such a transfer. Planning and allocation will be governed accordingly.

L. S. KUTER,
Brigadier General, U.S.A.,

Aug. 1, 1943

Dear Larry:

I was deeply pleased and flattered to have your note about my broadcast; it was very good of you to write.

Your point about the importance of the current air operations over Germany is well-taken. I could not expand on that "air front" last Sunday, because of time limitations. In a fifteen-minute broadcast I shall have to summarize the news of the week on all the global fronts and then devote most of my time to one front--whatever seems to be the most important and "newsy" front of that week. Last week, the new phase of the air offensive had just started on Saturday and the boiling up of the Russian front seemed to me most important. This week, were it not for Mussolini's resignation, I would have devoted major attention to the air front; in any case I hope to do that soon.

I would deeply appreciate any suggestions or criticism you may have to offer; indeed, from the point of view of the air war, I feel too much cut off from news sources up here in New York, and yet it is impossible for me to come oftener than I do to Washington. I would therefore doubly appreciate any background information or suggestions, and facts or opinions, but particularly data that will illuminate current operations from you, the Public

Relations section, or anyone in the Air Forces.

Congratulations on those Satevepost articles, which I am promising myself the pleasure of reading soon. I am sure Forrest Davis did a much better job than I could have done.

Incidentally, if that copy of that Montgomery booklet we spoke about is still available I would very much like to have a chance to look at it.

Sometime in the not-too-far distant future I hope to do a thorough series of articles on the shape and complexion our post-war military organization ---- national and international---should take. I hope I may call upon you for help.

With all best wishes,

31 July 1943

MEMORANDUM FOR GENERAL ARNOLD:

Subject: Conference with Air Marshal Williams, RAAF.

1. With reference to the Arnold-Williams-Welsh allocation conference set up by the Combined Chiefs of Staff yesterday, the following advantages and disadvantages will accrue if you remain positively firm on the U.S. allocation to Australia:

a. ADVANTAGES.

(1) More bombers for the Combined Bomber Offensive against Germany.

(2) Support to General Marshall's strong statement that Australia's allocations cannot be changed without restudy of the entire deployment program.

(3) Maintenance of unassailable authority of the Arnold-Courtney-McCain-R.W. Portal Committee. (This is very important. If we admit the authority of any person, other than the President, to review their decisions we will be in a hopeless tangle.)

b. DISADVANTAGES.

(1) Dr. Evatt will bombard the White House and General Marshall.

(2) The Royal Australian Air Force will not have a trained cadre to absorb heavy bombers which might possibly be available late in 1944 (same applies to all other Allies).

2. Source of heavy bombers for the Royal Australian Air Force.

Unless we are willing to accept a reduction in the bomber offensive against Germany, Kenney's heavy bombers must be diverted to the Royal Australian Air Force. There is a remote possibility that that Theatre might agree to such a procedure on a very gradual basis and without material reduction in the employment of bombers in that theatre against the enemy.

#53

THIS PAGE IS UNCALSSIFIED

3. Recommended Action:

a. That the Assistant Chief of Air Staff, Plans assemble Air Marshal Welsh and Air Marshal Williams for an allocation conference.

b. That the Assistant Chief of Air Staff, Plans be instructed to increase no single allocation and change no type in the existing paper.

c. Consideration be given in November 1943 to the assignment of B-25 medium bombers to the Royal Australian Air Force in 1944 providing Australia will accept the medium bomber in lieu of heavy bombers for their striking force squadrons.

L. S. KUTER,
Brigadier General, U.S.A.,
Assistant Chief of Air Staff, Plans.

Fire by friendly troops on our aircraft.

Assistant Chief of Air Staff, Training

Assistant Chief of Air Staff, Plans

1

LSK/dns/5833

1. General Arnold requires a brief memorandum to the Chief of Staff which will state in substance:

"I. Discussion.

1. Tabs A, B, C, D, etc., represent efforts of the Air Staff to lessen the probability of fire from friendly units upon our aircraft.

2. Wholly unsatisfied with the results of Staff action, I have presented the case personally to General McNair (General Arnold's letter to General McNair dated June 2, 1943). His reply (General McNair's letter to General Arnold dated June 15, 1943) is a long typical Staff action complaining about the inadequacy of aircraft for training with ground troops. He avoids my basic point -- that the subject is not one of recognition but of indoctrination - and refuses to accept the doctrine established in actual combat.

"II. Action Recommended.

1. The Army Ground Forces be informed that the War Department is satisfied with the efforts of the Army Air Forces to make aircraft available for air-ground training.

2. The Army Ground Forces will enforce the recommendations in my letter (General Arnold's letter to General McNair dated June 2, 1943)."

2. I believe that subject is within the province of your Division. If so, will you take over this project? If not, please let me know.

L. S. KUTER,
Brigadier General, U. S. A.

Col Poole, Gen Harper's Exec, called and stated that they would take care of this project.

Personnel Report of AAF in South Pacific by Colonel Deichelman

Assistant Chief of Air Staff, Personnel Wtn 7/30/43

Assistant Chief of Air Staff, Plans 1

LSK/dns/5833

1. Colonel M. K. Deichelman reported on his return from an extended visit with the 13th Air Force, especially grave personnel requirements in our air units in the South Pacific. The close integration of Army and Navy air elements in that theatre is complicated by the fact that it is a major Navy theatre and of considerably lower priority from the Army Air Force viewpoint. The net result is an abundance of high calibre naval officers and a dirth of AAF parallels.

2. No specific action is recommended. No requests for personnel by name are involved.

3. The foregoing comments are forwarded for your information with the suggestion from this Division that Air Staff personnel requirements in the 13th Air Force be given more consideration than the relative strength the Air Force might indicate due to the Army-Navy relationship in the South Pacific.

L. S. KUTER,
Brigadier General, U. S. A.

Telephone Conversation between General Kuter and General Eubank
29 July 1943

Kuter:	Hello, Gene.
Eubank:	How are you?
Kuter:	Fine. Thank you. How are you?
Eubank:	In your letter, which I just received, you mentioned Possum. I wonder if it would be possible for him to come out here and talk to us or for us to run somebody down and talk to him. I think he could probably give us a lot of good ideas about training that we might do over here.
Kuter:	I'm sure that he could, Gene, and I would guess it better to send somebody down to talk to him. He has been yanked back here twice and actually does need some leave.
Eubank:	Yeah.
Kuter:	I suspect it would be kinder if you got a good fellow to send him down to Tampa to see Possum there.
Eubank:	Yes.
Kuter:	Before doing so, however, I'd call down to be sure that he's going to be there - not lying on the beach some other place. And, you can reach him through the Headquarters Third Air Force.
Eubank:	Yeah. I could send a beach-lier down there to lie alongside of him.
Kuter:	Well, it's all the case of finding the proper beach on which to lie.
Eubank:	Well, Luke is a very fine fellow of a sort if he's looking for relaxation.
Kuter:	I think a fellow by the name of Dotta is involved in .....
Eubank:	Well, she might have to have a little consideration. Well, I think I'll do that, Larry. I think I'll send one of the training boys down - maybe Foghurst (?) if he'd like to make the trip while he's in Washington.
Kuter:	I think it would be a fine idea.

#59

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

Eubank: And, just talk a few things over with him and pick up a few ideas.

Kuter: He's got lots of them and he can speak with a lot of authority right now.

Eubank: Oh, I know he can.
How's everything going?

Kuter: Going around in the ordinary type circle. I wrote you a week or so ago and told you your name had not been up for orders for several days. I'd like to rescind that as of yesterday.

Eubank: Well, look I'm .... General Johnson is gone now, you know. I'm at Colorado Springs.

Kuter: I know that. General Johnson was here yesterday.

Eubank: He didn't concur, did he?

Kuter: Under these circumstances, he did reluctantly.

Eubank: I see.

Kuter: Tell Helen not to throw those road maps away from Sioux Falls to Sioux City particularly.

Eubank: I see. Well, Larry, I certainly appreciate any word you can put in for me.

Kuter: I did so.

Eubank: (About 3 word remark that I couldn't understand)

Kuter: This is the same business that has been up before, Gene. Joe McNarney has been down there. The interest in that establishment is at a new high at this point and the concern about its flying apart is growing daily. That's in general the situation right now.

Eubank: I wonder, has he thought of Jamey (?) who is on his way back?

Kuter: We had. Jamey is assigned to this office, as a matter of fact, on the old man's instructions. We have other good names including Santy Fairchild.

Eubank: I can't compare ..... I can't hold a candle to him.

26 July 1943

MEMORANDUM TO GENERAL KUTER:

Subject: Staff Conference in General Giles' Office, at 2:30 PM, 26 July 1943.

1. General Giles was not present, and General Perrin presided in his place.

2. The following is an outline of the major topics discussed during the subject conference:

a. All Staff Sections, having anything to do with press releases were cautioned to avoid mention of specific figures, and to give percentages of strengths, airplanes, and so forth, instead.

b. General Giles is dissatisfied with condition of units going overseas. More careful inspection is required. He threatens to "crack down" personally on the subject of training and inspection of these units unless results are obtained.

c. General Arnold does not want officers to drop papers on his desk and leave them unless he has requested someone to see him personally. All other papers, both incoming and outgoing, should be screened through his secretary.

d. General Perrin stated that he attended a meeting of the Service Commanders in Chicago at which the impression apparently prevailed that the Air Corps was in a bigger spin than any other Command of the Army. An interesting point discussed was that Service Commanders wanted to command everything in their areas in the same manner as Theater Commanders.

e. General McNarney visited Orlando and was very favorably impressed with conditions found there. He suggested that an inter-change of commanders between Orlando and Desert Training Center might be beneficial to all concerned.

f. The Bureau of the Budget is becoming increasingly interested in salvage programs.

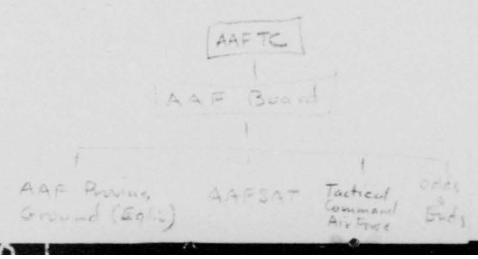
#61

THIS PAGE IS UNCALSSIFIED

g. Colonel Elliott Roosevelt recently had an interview with General Arnold during which he expressed the opinion that the Photo Intelligence School at Harrisburg was not too satisfactory. He further thought that the school should train more graduates, and that the distribution of graduates should be more in conformity with combat requirements. It apparently was his impression that a lot of Photo Intelligence officers were being sent to inactive theaters. General Sorensen seemed to think that the Colonel's indictment was not as serious as claimed, and stated that efforts were being made to correct any discrepancies noted by the Colonel.

h. Since the establishment of the Air Staff it has been found that G-2 is continuing to parallel a lot of functions being performed by the Assistant Chief of Air Staff, Intelligence. General Sorensen stated that studies were underway in which the transfer from G-2 to A-2 of certain Air functions are being considered. The transfer of these functions would also be accompanied by a transfer to the Air Staff of approximately 20% of G-2 Air Intelligence personnel.

i. The Air Surgeon states that the Surgeon General has approved the issue of whiskey to combat crew members upon completion of each mission in the proportion of two ounces per combat crew member, per mission. Logistically this would require 35,000 cases between now and the end of December. The resulting distribution problem should be referred to M M & D.



AAF Tactical Command

j. Colonel Tindal requested that all directives to ~~AAFSAT~~ be coordinated through the Air Adjutant General.

k. The Air Inspector requested that inspection activities scheduled by the several Staff Sections of the Air Staff be coordinated with his Office before departure. He also requested that copies of inspectors' reports be forwarded to him.

3. No requests were made requiring action by the Plans Section, and I made no comments on behalf of the Plans Section. Well Said!

F. G. Allen
Colonel, A.C.

20 July 1943

MEMORANDUM FOR COLONEL E. C. LANGMEAD:

1. General Arnold stated this morning that the trend in the highest circles favors giving heavy bombers to New Zealand and Australia rather than to the Royal Air Force on the basis that the former will fight those aircraft, while the Royal Air Force will use them for non-combat purposes.

2. From General Arnold's comments, I do not conclude that we should increase New Zealand or Royal Australian Air Force allocations at this time, but that further negotiations will result in greater allocations and possibly reduction of the Royal Air Force commitments.

L. S. KUTER,
Brigadier General, U.S.A.

July 15, 1943.

MEMORANDUM FOR COLONEL WILLIAMSON:

As result of General Fairchild's statement to the large Joint Planning Group yesterday, the directive to the JWPC to study the campaign against Japan should include the following thoughts:

Under the circumstances assumed, we will have at the time of this invasion a far greater Air Force than the world has ever seen. Over 1200 heavy bombers per month will be available for our units. Some 28 groups of B-29's should be available. All planning to date appears to be conventional Army or Navy planning.

In view of the foregoing, this campaign should be looked at from an abstract purely air point of view. I am reluctant to believe that we should be planning the closing of airplane factories in connection with opening such a major campaign.

The directive should also be perfectly clear that the BEW role in planning the air attack against Japan should be through the Plans Division of the Army Air Forces and not through the JWPC.

L. S. KUTER,
Brigadier General, U. S. A.,
Assistant Chief of the Air Staff, Plans.

Diary

July 12, 1943.

MEMORANDUM FOR COLONEL WILLIAMS:

It is necessary that I attend a Justice Byrnes Committee to relate strategy and production with Tom Handy at 2 PM today.

Please have someone (Joe Loutzenheiser ?) attend a 2 PM meeting in Barney Giles office which discusses the disposition of the remnants of our Antisubmarine Command. With no thorough study my quick thought is that the experience level of these units is much too high to permit them to move directly into a theatre (after a small amount of high altitude training) with the possible exception of new operations in the Pacific. Their navigation proficiency particularly might be most desirable in such operations. They would not be required for such a job until the fall. Two or three groups might be required. Surely the future expansion of training requirements should be seriously considered in disposing of the high level of experience in this unit. I appreciate Swede Larson's and Ford Fair's desire to maintain their units and view with distaste the breaking up of an organization which may have a high degree of morale. In view of the foregoing, however, I see very little hope of retaining the units.

Please have someone (Colonel Williams) attend General Stratemeyer's weekly staff conference at 2:30. I will join it later if my 2 PM date is a short one.

Possible Jap Attack on Russo-Japanese Border.

Chief of the Air Staff — 11 July 1943

Assistant Chief of Air Staff, Plans — 1

LSK/dns/5833

1. Secret message from the Western Defense Command to G-2 this date, referred to reports of Russian ferry pilots, enroute from Siberia to Alaska, that the Russian Government had warned them to be on the alert against possible Jap attack while enroute.

2. This message was forwarded to G-2 for action and information copies to OPD and Secretary of General Staff. General Marshall initialled it and sent it to "Air Forces".

3. I referred it to A-2 with a query: "Does this warrant immediate action?" A-2 replied informally: "I believe planning should be done in anticipation of early action in that area." A-2 forwarded C.I.C. 28, dated 3 July 1943, subject: Japanese Intentions, which did not indicate probability of imminent Japanese action in Siberia, and C.I.C. 30, dated 30 June 1943, which concludes that Russia is not liable to attack Japan at this time. General Sorensen based his recommendation on "some possibility of course that the attached (CIC estimates) give too optimistic a view".

4. I discussed this matter with General Upston, OPD, who referred to previous ..cations from Mr. Stalin that his only concern in the event of operations in that theatre was that we provide him sufficient airplanes. He indicated that he would not accept American units. Both Western Defense Command and the Alaskan Defense Command are cognizant of the Russo-Japanese situation.

5. As Assistant Chief of Air Staff, Plans, I recommended to the Chief of the Air Staff this date that no action be taken on the message cited above. This recommendation was accepted and this memo prepared to make the subject a matter of written record.

L. S. KUTER,
Brigadier General, U. S. A.

Telephone Conversation between Gen. Kuter
and
Colonel Sirmyer of Flight Control Headquarters

7/6/43

Gen Kuter:	Kuter speaking.
Maj. Lane:	Sir, this is Major Lane, Flying Safety Division of the Flight Control Command.
Gen. Kuter:	Right, Lane.
Maj. Lane:	Did you call this morning about that accident that happened in Virginia a few days ago?
Gen. Kuter:	Yes, I did.
Maj. Lane:	All we have on it, sir, is a radiogram from the Richmond Army Air Base and I called them just now and got some additional information. There isn't much they can tell us about what caused the accident. It happened in rather a remote section of Virginia there and it happened between 10 and 10:30 at night. They've got the time pretty well set.
Gen. Kuter:	Good.
Maj. Lane:	The plane circled this field, apparently the pilot was trying to make a forced landing and he circled the field several times flying very low, and from the records they found there, it would appear that he overshot the field that he was trying to land in, then tried to apply power to perhaps go around again and the plane stalled and spun in.
Gen. Kuter:	Do we know anything about the training or qualification of the pilot?
Maj. Lane:	No, sir, I do not. They have him listed here as a Major William Marks, Headquarters Army Air Forces, Bolling Field.
Gen. Kuter:	Good.
Maj. Lane:	I haven't checked Bolling Field as to his qualification or not.
Gen. Kuter:	Good. Where was .... Did you get an exact location of the accident?
Maj. Lane:	Well, at Saxe, Virginia.

Gen. Kuter: S-a-x-e, Virginia. 10 to 10:30 PM, on what day?

Maj. Lane: June 30th.

Gen. Kuter: June 30th.

Maj. Lane: That's right. And they were just going cross-country from Charlotte to Bolling Field. And, it was cloudy at the time. Witnesses say there had been considerable rain in the vicinity shortly before the accident.

Gen. Kuter: Okey and that's all you have on it at this time, is that right?

Maj. Lane: If there is anything else you would like me to get, I would certainly do it for you.

Gen. Kuter: Thank you very much. I believe that that answer is it.

Maj. Lane: The officers I presume you have in mind were Colonel Burtons, Colonel Bowman, Lt. Col. Todd.

Gen. Kuter: Yes, that's the same party.

Maj. Lane; Okey,

Gen. Kuter: Well, thank you very much, Lane.

Maj. Lane: Perfectly all right, sir.

Gen. Kuter: Righto.

Reference Data for Air Staff work

Assistant Chief of Air Staff, Plans
Att: General Kuter
Assistant Chief of Air Staff, Training

3 July 1943

EHH:ren 71844 2

1. This office hesitates to present ratios of airplanes and instructors to students in various phases and categories of training which might prove more misleading than informative.

2. Pilots. In the governing item of pilots, this office has directed an all out effort by overloading present facilities. This will result in approximately a 14% increase in pilot production. But it also means that we have approached, if not reached, the saturation point on present facilities. To increase further the production of pilots, additional facilities such as fields, buildings, runways, etc., will be necessary. Some flexibility still remains in the transition of 4-engine pilots, but not in the regular pilot production.

3. Bombardiers. Bombardier production, after being stepped up in proportion to pilot step-up, still retains flexibility of possibly 10 to 20%. Instructor ratio is one to three and airplane ratio one to 6.8. After this step-up, additional facilities, including targets, would be necessary.

4. Navigators. This training category, as in pilots, has been overloaded to the limit of saturation. New facilities such as fields, housing, etc., will be necessary to effect an increase, as well as equipment and personnel.

5. Gunners. Some little increase may be effected on present stations, but very little. Here also new facilities will be required.

6. It is suggested that a conference between General Kuter and Colonel DuBose, of this office, would serve to clarify what can and what cannot be done in training without building or taking over additional facilities.

ROBERT W. HARPER
Brigadier General, U. S. Army
Assistant Chief of Air Staff, Training

1
LSK/dns/5833

1. It is quite apparent to me that I shall need in my business certain reference data pertaining to training. I have in mind certain items which are probably axiomatic, for example:

"One B-24 to the Flying Training Command today means ____ additional four-engine pilots in ____ weeks."

"An additional four-engined pilot instructor to the Training Command today can train ____ instructors in ____ weeks who in turn can train ____ four-engine pilots in ____ more weeks."

2. I believe that similar data on the critical items of personnel and equipment as they pertain to training, technical, OTU and other stages in addition to Flying Training Command's interest, may be of real assistance to me and in other Air Staff agencies.

3. If this idea sounds promising to you, I would appreciate seeing a few of the items of the type referred to above prepared in draft form.

L. S. KUTER,
Brigadier General, U. S. A.

MEMORANDUM FOR GENERAL ARNOLD:

Subject: American Defensive Attitude.

1. Recommend you talk to the Chief of Staff along the following lines:

a. American troops on the ground, including Army Air Forces, are imbued with a deep and overwhelming defensive attitude, at least insofar as hostile aviation is concerned. The desire to hide and the interest in cover, concealment, dispersion, camouflage and black-out is deepseated.

b. These natural aftermaths of Pearl Harbor and Bataan automatically surrender most of the advantages of control of the air to the enemy, without making him fight for the advantage we give to him by stopping our work and running and hiding.

c. Within the Armed Forces, the subject can be handled by directing that conditions wherein we have complete control of the air be simulated, at least as often as conditions wherein the enemy is superior in the air, during training and in maneuvers.

d. One reason the American soldier runs and hides at the appearance of an unknown airplane is directly traceable to the very elaborate defensive establishment in the United States, including the deep interior, and the general public attitude it engenders.

e. It is now ridiculous that factories should stop, war activity be suspended and man-power be diverted any further in Kansas City, St. Louis, Washington, New York or San Francisco. We are sufficiently well trained to meet the improbable situation wherein the enemy operates in our skies.

f. It is suggested that the Chief of Staff issue appropriate directives to the Army in general and the Eastern and Western Defense Commands, particularly. At the same time, it appears necessary that the subject be discussed with the President to the end that he will suspend black-outs, "air-raids" and other civil defense activities which absorb man-power and generate defensive mindedness.

g. We need no more practice on the losing side of this air war.

L. S. KUTER,
Brigadier General, U. S. A.

"No record of action taken" DNS

Report from Gen. Kenney on the 5th Air Force

General Arnold (Through General Stratemeyer) July 1, 1943.

General Kuter 2

LSK/dns/5833

Proposed reply to the "attack aviation" paragraph of General Kenney's letter:

Your proposition that the words "attack aviation" be put back in the Air Corps dictionary is a bit confusing. Surely you are not talking about your own personal dictionary, since you have never asked any one's approval of your extraordinary vocabulary before. The enclosed press release confirms my belief. Quite evidently you already have an "Attack Group" and "Attack Squadrons".

In my vocabulary "attack aviation" is redundant or incorrect for two reasons:

Attack tactics have **definitely not** as you state proven sound "every day all over the world". Eaker's last effort to use B-26's as "attack airplanes" resulted in a loss of eleven out of eleven. Spaats used A-20's and P-39's in attack tactics profitably in November and December. In January, the Huns decided they were being hurt thereby and the loss rate of A-20's on the deck immediately jumped to the point where operations at altitudes below 6500 feet were prohibitive. By early February, even P-39's were "too slow and unmaneuverable" for further employment on the deck. Hence, if we had a class of aviation labelled "attack aviation" in the worldwide Air Corps dictionary, that class would now be idle in our two larger theatres.

In the second place, it appears to me that even your excellent low altitude tactics have no relationship with a particular class of aviation, attack or otherwise. Your operations indicate the resourceful employment of two obvious classes - fighters and bombers. The bomber class is quite clear. Bombers are airplanes built to do that job. Whether they fly at high, medium or low altitude is an item of tactical employment in the hands of the various Air Force Commanders. The fighter class has undergone considerable metamorphosis in the past year. You will remember that Toohey used to advocate that "a fighter is a fighter and the addition of bomb racks makes it something else". As a result of his operations in Africa, Toohey has now swung over all the way and maintains that a fighter isn't an acceptable fighter unless it can be a fighter-bomber when it isn't required for straight fighting. Although I do not go quite all the way with Toohey, it is perfectly clear to me, as a general statement, that fighters do have two jobs - clearing the air and keeping it clear. Since the latter job normally requires far fewer airplanes than the former, it is obvious that at least the "unemployed fighters" must be bombers. This is evident without consideration of the fact that fighterbombers are better bombers than light or medium bombers (excluding range, navigation and ability to employ fragmentation bombs efficiently).

In conclusion, I am inclined to modify the Air Corps worldwide dictionary. This change would state that there are three classes of aviation - bombers,

#72

fighters and reconnaissance. I believe it would be quite wrong to include your "attack aviation".

Lest there be any doubt, however, you are perfectly free to continue ~~using~~ using your own unexpurgated vocabulary. If you want to form attack wings, groups and squadrons consisting of units of bomber, fighter or reconnaissance aviation, I can see nothing but some possible administrative bottlenecks which might delay you.

L. S. KUTER,
Brigadier General, U. S. A.

1 Incl:
Press Release.

General Giles
General Harper

Report from Gen. Kenney on the 5th Air Force

General Kuter 6/29/43

General Arnold 1.

The following is extracted from a letter which I have just received from General Kenney:

> "Speaking of attack aviation, how about putting these words back in the Air Corps dictionary? The tactics of attack aviation are still sound, we have proven them effective and they are more in evidence every day all over the world. We have yet to lose a plane with low altitude work against shipping and it is not because we have had no opposition. The secret is high speed approach and exist under cover of a lot of forward gun fire. What I would like to have you do is to put attack aviation back on the map and as soon as I get these groups fixed up for this type of work let me organize an attack command. The table of organization for the Fighter Command Headquarters and Headquarters Squadron will do and the rest of the tables follow those the units now have. It would be a popular move and I believe it would be much better than breaking the Bomber Command into two or more wings when there are too many groups to handle under one command control."

Prepare suggested reply for me to make to him. Bring out the fighter bomber and why it was necessary.

H. H. A.

Report from Gen. Kenney on the 5th Air Force

A-2 IN TURN: General Kuter 6/29/43
General Giles
General Arnold General Harper 1.

The following is extracted from a letter which I have just received from General Kenney:

> "The new 380th Heavy Group is beginning to get into action. Nearly every one of the crews has been out on missions with the 90th Group and over half of them have made one or more sorties on their own. They are not so good on bombing and they tend to stray during bad weather and at night but their gunners have been either fairly good or lucky and the ships are coming home. On the night of April 11th/12th I sent one squadron of seven of them to bomb Vunakanau airdrome. Two made it, four turned back on account of weather and one, after bombing Goodenough Island 350 miles south of the target, has not shown up yet. Fourteen planes from the 90th Group took off on the same mission, eleven made it, two had motor trouble and one came back on account of the weather. However, on its first mission the 90th Group lost three out of twelve airplanes, and after one had reached the target the remaining nine landed on six different airdromes from Milne Bay to Townsville. On the night of April 14th/15th five planes of the 380th Group took off to bomb Lakunai airdrome. They all got there, did a good bombing job and then on the way back two of them met in broad daylight about fifty miles east of Moresby where they decided to practice formation flying. They rammed each other. Both planes were lost, eight men were saved from one and the crew of the other is still listed as missing. They may have bailed out over the jungle."

Prepare suggested reply for me to make to him.

H. H. A.

Excerpt from TIME, January 25, 1943.

LOGISTICS

Bomber Businessmen

Across a wintry Harvard quadrangle this week marched 151 singing Air Forces cadets to graduation exercises that made them Stat Control Officers, newest category of the Army Air Forces. They already had their orders for a new kind of field duty that is a cross between war and big business.

Behind them was training such as U.S. soldiers had seldom seen. Picked from the Air Forces training school at Miami, they had been whisked to Harvard's Graduate School of Business Administration, put through six weeks of courses ranging from statistical methods and analysis to pistol practice. There they had been fitted, at the inspiration of Lieut. General H. H. ("Hap") Arnold, Chief of the USAAF, to apply the best technical methods of U.S. business to the Air Forces. Thus had the Air Forces made a new (and already successful) approach toward exactitude in a new, vastly complicated and swift-moving art: air logistics.

The Job. More than in any other service youth runs the Air Forces. Frequently a man in his early 20s commands a bombardment squadron worth $5,000,000 to $10,000,000 in equipment alone. Most have no business training, though each unit is a business which must turn in a profit. Once Arnold's system is in full operation, a Stat officer will be attached to each Air Force unit down to the farthest squadron. By instituting a management-control system, General Arnold hopes to up those profits in terms of damage to the enemy and conservation of U.S. men and equipment. Each Stat officer records and analyzes weekly the status of: 1) planes (ready for combat, repairable, out of action); 2) personnel (number and types of training, casualties, replacement needs); 3) operations (type of mission, time, weather, degree of success, cost in men and equipment).

The Stat officer's analysis guides his local commander. It is also sent direct to Air Forces G.H.Q. in Washington, where, in coordination with other reports, it provides an up-to-the-minute picture of U.S. air power, is invaluable in planning new operations, aircraft production and training schedules. In a matter of minutes, General Arnold can tell the status of AAF units all over the world. Red tape is eliminated by routing reports direct to G.H.Q., thus by-passing intervening officers.

In Washington a battery of classification machines sorts the reports in the same way big corporations keep track of their sales, production and personnel. At the touch of a button any kind of detailed information is available. Examples: how many technical sergeants with experience as navigators there are in the Air Forces, how many spare engines are on hand in Australia.

The Training. Early last March General Arnold tossed the problem of setting up such a system into the lap of a staff assistant, Colonel Byron E. Gates, promising his complete backing if there were squawks from traditionalists whose toes got stepped on. With the help of a statistics-minded young Texan, Lieut. Colonel Charles Thornton, he set to work. By mid-April the program had been set up, arrangements made with Harvard Business School to train cadets at $60 per man.

Cadets were given concentrated schooling on how the Air Forces are organized, methods of collecting and gauging statistics, analysis of personnel by function and training, military law, and a variety of related subjects. Most important, they were taught the importance of accurate statistical information to military logistics (*i.e.*, the mathematical approach to supply and transport problems). By graduation day cadets had been thoroughly indoctrinated with the belief that there was nothing dull or unimportant about their strange new jobs. As Stat officers their tasks would be as vital to the winning of battles as pilots' or gunners'.

The Practice. Effectiveness of the new system could not be gauged in the first months. Not until a Stat inspection officer visited a war theater did its sponsors find out. In Australia Lieut. General George Kenney, chief of the Allied Air Forces in the Southwest Pacific, called the system "the answer to my prayers," pleaded for more Stat officers.

In New Guinea, the inspector flew in to a jungle strip field set up in a swamp. Over one pup tent beside the field was a crudely painted sign: "Statistics Control Officer." Although the job is classified as desk work, the inspector found few at desks, most seeing front-line action. Three Stat officers already had been killed. Working at desks at Harvard, young Stat cadets hopefully see the promise of combat medals in such a career, new as it may be.

Members of this week's graduating class, sixth to go through the school, were assigned to England, Australia, many another combat zone, while a fresh group of cadets hustled to Harvard to learn methods for running airfighting on a business basis. In the field their seniors were already key figures in a vital art. For as even the new officer knows, it is logistics that wins wars.

WAR DEPARTMENT
HEADQUARTERS OF THE ARMY AIR FORCES
WASHINGTON

June 12, 1943

MEMORANDUM FOR GENERAL KUTER

SUBJECT: Activities of the Committee of Operations Analysts

1. On December 9, 1942, General Arnold issued a directive to the Assistant Chief of Air Staff, Management Control, directing him to have a group of operations analysts under his jurisdiction prepare and submit a report analyzing the rate of progressive deterioration that should be anticipated in the German war effort as a result of the increasing air operations we were prepared to employ against its sustaining sources.

2. At the time the directive was issued, the only operations analysts consisted of Lt. Colonel W. B. Leach and the writer. The committee, as organized under Colonel Gates, consisted of the following:

Brig. Gen. Edgar P. Sorensen
Asst. Chief of Air Staff,
Intelligence

Lt. Colonel Malcolm W. Moss, Chief
Target Information Section
European Division, Intelligence

Lt. Colonel Thomas G. Lanphier
Air Section, G-2

Lt. Colonel W. B. Leach
Operations Analysis Section
Management Control

Colonel Guido R. Perera
Operations Analysis Section
Management Control

Mr. Elihu Root, Jr. (New York attorney and director of many prominent corporations)

Mr. Thomas W. Lamont
Chairman of the Board
J. P. Morgan & Co.

Dr. Edward M. Earle
Institute for Advanced Study
Princeton, New Jersey

Dr. Edward S. Mason
Office of Strategic Services

Mr. Fowler Hamilton, Chief
Enemy Branch
Board of Economic Warfare

3. The purpose of the Committee was to synchronize the efforts being made in diverse places toward the solution of the problem presented. Up to that time, there had been no study prepared in which all of the intelligence services and experts from industry had cooperated.

SECRET

#75

THIS PAGE IS UNCALSSIFIED

4. Several subcommittees were created, consisting of representatives of the various intelligence agencies, together with leading experts from industry. These subcommittees included the following:

Aircraft	Coke
Machine Tools (including abrasives, ball bearings and optical instruments)	Iron and Steel
	Electric Power
	Electrical Equipment
Petroleum	Chemicals
Rubber and Tires	Food
Non-Ferrous Metals	Nitrogen
Submarines	Anti-aircraft and anti-tank Artillery
Motor Vehicles	
Transportation	

5. Numerous Committee meetings were held, at which the chairmen and members of the various subcommittees presented reports. These reports were subjected to critical cross examination.

6. Before any final report had been made, Mr. Hamilton, Colonel Leach and the writer traveled to England for the purpose of comparing and supplementing their data by conference with the Eighth Air Force, the Royal Air Force, the British Ministry of Economic Warfare and other pertinent agencies. They were joined in England by Mr. Root. When the object of the visit had been made clear, the members received a courteous reception. Numerous conferences were held with representatives of the various interested agencies. The members of the Committee then returned to the United States where final hearings were held upon the make-up of the Committee report.

7. The Committee's report did not formally attempt to select any list of targets for security reasons but the relative value of the various industries was indicated by the position of the industry in the study. The report was presented to General Arnold on March 8, 1943.

8. General Arnold then sent Colonel Cabell with the report and all subcommittee reports to England. These were subjected to careful examination by representatives of General Andrews, the Eighth Air Force and the Royal Air Force. All agreed that the conclusions were sound. On the basis of these conclusions and of operational factors, there has been prepared, as you know, a plan for bombardment of the Western Axis. This plan was brought to the United States by General Eaker and presented to the Joint Chiefs of Staff who approved it. It was subsequently approved by the Combined Chiefs of Staff and by the President and Mr. Churchill.

9. On March 23, 1943, General Arnold issued another directive to Colonel Gates covering a study of Italy and Japan. The Italian study

was handled in similar manner except for the fact that no trip was made abroad. This was due to the fact that the study was needed for the conferences being held between the British and American authorities during the visit of Mr. Churchill. The original was used by General Streett during these conferences and a copy was taken to General Spaatz by Colonel Smart.

10. The study on Japan is now in its initial stages. Subcommittees have been formed and some are already working. The Navy has been requested to furnish personnel and has expressed informal agreement.

6/15/43

MEMORANDUM FOR RECORD: (Army Air Forces position on after-the-war commercial aviation matters.) General Arnold announced this morning that our official position with the present organization of the Army Air Forces, on commercial flying after the war is very clearly that the Army Air Forces will have no relationship whatsoever with that matter. Commercial matters will be a problem for commercial people.

2. It is important that General Arnold's name and official action by the Army Air Forces never be associated with matters where after-the-war commercial flying is the primary subject.

3. In accordance with the foregoing, the Plans Division did this date return to OPD a paper, subject: Commercial Use of Kindley Field (Bermuda) recommending that no action be taken.

AIR STAFF ELATED OVER PANTELLERIA

Officers at Washington Talk Rehearse Operation From Maps and Dispatches

CALL IT 75% AMERICAN

Crete Is Believed Nearest Thing to 'Tea Party' Landing Achieved by Aviation

Special to THE NEW YORK TIMES.

WASHINGTON, June 11—Elated by the fall of Pantelleria, the Army Air Force called a press conference today to tell how war planes made the so-called Italian Gibraltar give up before a single Allied soldier landed.

Brig. Gen. Laverne G. Saunders, deputy chief of the Army Air Staff, presided over the conference and air force officers, on the basis of dispatches from the scene of action, described the Pantelleria campaign. One of them termed it "the first example, from our standpoint, of the all-out use of air power." There has been, they said, nothing to compare with it save, perhaps, the German capture of the island of Crete.

It was true, the officer said, that the Navy helped some but by and large it was an Air Force show and furthermore, an American Air Force show. During the heaviest attacks upon the island, American fliers, the Army said, did about 75 per cent of the work.

Operation Is Described

Using a large relief map of the pear-shaped little island and another large map of the area around Pantelleria, including Sicily, Corsica, Cardinia and the near-by coast of Italy itself, Air Force officers told how the Allies established "overwhelming" air superiority during the latter stages of the Tunisian campaign and have maintained it in the area since.

As a prelude to the intensive air attack on Pantelleria, air and naval forces cut the enemy lines of communication, blasted away at the sources of supply and aimed at the destruction of neutralization of the Italian Navy. In all this activity, aviation carried the brunt of the job.

[illegible] the island had been

Credit Given to Navy

The air forces tempered their statements about the part of aviation by referring occasionally to the naval attacks upon the island. Pantelleria was shelled six times by Allied naval vessels, destroyers taking part in five actions and destroyers and cruisers in the other. In this connection, one officer said that there had been no official word or photographic evidence of damage to Italian battleships in the bombing that preceded the all-out attack, although it was thought one had been hit.

One officer termed the Pantellerian campaign "a new development" in air support of ground action. He said the old idea had been for air support before and during ground action but this furnished an instance where the air

campaign. One of them termed it "the first example, from our standpoint, of the all-out use of air power." There has been, they said, nothing to compare with it save, perhaps, the German capture of the island of Crete.

It was true, the officer said, that the Navy helped some but by and large it was an Air Force show and furthermore, an American Air Force show. During the heaviest attacks upon the island, American fliers, the Army said, did about 75 per cent of the work.

Operation Is Described

Using a large relief map of the pear-shaped little island and another large map of the area around Pantelleria, including Sicity, Corsica, Cardinia and the near-by coast of Italy itself, Air Force officers told how the Allies established "overwhelming" air superiority during the latter stages of the Tunisian campaign and have maintained it in the area since.

As a prelude to the intensive air attack on Pantelleria, air and naval forces cut the enemy lines of communication, blasted away at the sources of supply and aimed at the destruction of neutralization of the Italian Navy. In all this activity, aviation carried the brunt of the job.

Although the island had been raided time and time again, the intensive attack on Pantelleria began with June. For the first three days less than 100 tons of bmobs fell. This rose to a total of 1,350 tons by the end of the first week and, on the last day covered by dispatches, to 700 tons. By conservative estimates 3,500 tons of bombs fel on Pantelleria during June.

The final crushing offensive involved a thousand sorties a day and officers said a thousand planes were used. Heavy bombers, light bombers and fighters all took part in the attack and low level bombing figured, as did high level bombing and skip bombing, including skip bombing intended to bounce bombs into the underground hangars on the island.

Types of Planes Used

The Allies used Airacobra fighters, Lightning fighter-bombers, Warhawk fighter-bombers, Flying Fortresses, Liberators, Marauders, Billy Mitchells, Havocs, Spitfires, which were piloted by both Americans and British, and Wellingtons. Officers said no Sterlings, Lancasters or Halifaxes were employed.

After Tunisia fell there was little German or Italian fighter opposition until Saturday of last week but since that time there has been daily interceptions by enemy machines, mostly German.

The Air Force said that almost all the opposition in the area, including opposition in bombing raids carried out on Sicily and the Italian mainland were from German planes. The few Italians encountered, the officers said, apparently went up to take a look around and "then ran."

The loss of airplanes in the entire operation, the Air Force said, was "phenomenally low, less than one-half of 1 per cent of the planes employed, during the entire operation."

Although the island had been heavily fortified and the volcanic rock lent itself to underground fortifications, the anti-aircraft fire was weak and inaccurate when the attack began and although it strengthened, continued inaccurate throughout the assault.

Credit Given to Navy

The air forces tempered their statements about the part of aviation by referring occasionally to the naval attacks upon the island. Pantelleria was shelled six times by Allied naval vessels, destroyers taking part in five actions and destroyers and cruisers in the other. In this connection, one officer said that there had been no official word or photographic evidence of damage to Italian battleships in the bombing that preceded the all-out attack, although it was thought one had been hit.

One officer termed the Pantellerian campaign "a new development" in air support of ground action. He said the old idea had been for air support before and during ground action but this furnished an instance where the air operations made the landing a "tea party."

Told that the President had commented that the enemy ran out of water, the officers said that they had no information on the matter.

The maps during the press conference showed the coasts of Sicily and other Italian islands temptingly close to Pantelleria. To the question whether the same powerful air attacks that crushed the island might not be employed with eequal success on other near-by territory, an air officer said:

"That probably is the question the Italians are asking today."

MEMORANDUM FOR GENERAL STRATEMEYER:

Subject: Defense of Air Force Installations.

1. In agreement with General Hanley, it is recommended that the attached study not be approved in the form now written and suggested that the recommended action be amended substantially as follows:

The Secretary of War directs that:

The Adjutant General reply to the requests of the Fifth and Eighth Air Forces and transmit copies of those replies to all other Air Forces outside the continental United States, substantially as follows:

Reference your requests for increases in Air Force Headquarters to permit handling Staff responsibilities for the defense of airdromes, it is the policy of the Army Air Forces that our Air Force Headquarters will be reduced in size rather than increased. It is suggested that a portion of the present A-3 Divisions can handle the responsibilities in question, provided that the tactical and administrative planning, training and control functions are properly decentralized to the Anti-aircraft Artillery and other units which may be assigned to the Air Forces for airdrome defense.

L. S. KUTER,
Brigadier General, U. S. A.

MEMORANDUM FOR THE CHIEF OF STAFF: (Attention: A.C. of S., G-3)

Subject: Defense of Air Force Installations.

I. Discussion.

1. Urgent requests have been received by this headquarters from both the Fifth and the Eighth Air Forces for defense sections capable of assuming staff responsibility for the defense of airdromes.

2. Current War Department doctrine expressed in FM 1-25 "Air Defense" contemplates as normal the assignment or attachment of antiaircraft units to Air Forces and subsidiary Air Force commands. Unless the organic means for administering and controlling such units is provided, the various Air Force Headquarters will be forced to assume without assistance an additional burden.

3. The defense of Air Force installations is very largely an antiaircraft problem. Antiaircraft weapons, being dual purpose, can be employed for ground fire when the necessity arises. Antiaircraft officers, as ground soldiers, are capable of solving infantry aspects of the airdrome defense problem.

4. Assignment of antiaircraft headquarters units to Air Forces and major subsidiary Air Force commands would effect the utmost economy in providing at once:

a. Command agencies for the tactical and administrative control of assigned or attached antiaircraft units.

b. Staff agencies for defense planning, training, inspection, and liaison purposes.

II. Action Recommended.

The Secretary of War directs that:

1. Tables of Organization for Air Force Headquarters be amended to include provision for the assignment to each Air Force, as required, of an Antiaircraft Command or a Headquarters and Headquarters Battery, Antiaircraft Brigade.

#81

THIS PAGE IS UNCALSSIFIED

2. Tables of Organization for Air Support Command, Bomber Command, Fighter Command and Air Service Command Headquarters be amended to include provision for the assignment to each type command, as required, of a Headquarters and Headquarters Battery, Antiaircraft Brigade or a Headquarters and Headquarters Battery, Antiaircraft Group.

TURKISH EMBASSY
MILITARY ATTACHE
No. 819

Washington, D. C.

May 27, 1943

Confidential

Colonel O. T. Jamerson
Foreign Liaison Branch
War Department
Pentagon Building
Arlington, Virginia

Dear Colonel Jamerson:

I would like to refer to the letter of March 12, 1943 and number MID 350.2 sent to our Air Attache in reply to his enquiry with respect to the training of one hundred Turkish air cadets in this country. In that letter it was stated that the training of one hundred Turksih air cadets in 1944 had been approved by the commanding general, Army Air Forces, who reserved the right to cancel the agreement to train all such personnel as might not have reached the United States upon conclusion of the War.

In the latest instructions that have reached me from the Turkish General Staff I am informed that on the basis of the conferences held with the British Prime Minister in Adana, it has been considered necessary to increase the personnel of the Turkish Air Force with a veiw to future requirements, and that the enrolment of air cadets in the military academy has consequently been raised. Some of these cadets will be sent to Britain for training, but special importance is attached to the plan of having one hudnred of them traінind in this country. It is therefore desired to learnethe exact date when the air cadets may conveniently start training in this country so as to be able to make the preparations necessary for their arrival.

With the consideration that the transportation of one hundred cadets would involve difficulties if it should come at a time of heavy air traffic, it is regarded as essential for the prevention of delays and other interruptions that they should be in a position to observe the schedule to be drawn by the War Department. It is

(over)

2043

therefore pointed out that the determination of the date of training at this time would be very helpful in making the necessary alterations in the scholastic program of the cadets and in completing other preparations which

May 27, 1943

are required for their departure from Turkey.

I would appreciate it very much if you would kindly reconsider the entire matter and inform me of the date when one hundred air cadets may expect to begin their training in this country. Although it is hard to foresee the circumstances, information as to the approximate date for the presence of the cadets in Cairo would also be appreciated.

Yours very truly,

Cemal Aydinalp

Staff Major

Military Attache

AIR MINISTRY,

KING CHARLES STREET,

WHITEHALL, S.W.1.

ACAS(ops)/B.20C.

8th July, 1943

Dear Ira,

I am enclosing for your personal information a dossier on the subject of the attack of WIENER NEUSTADT and REGENSBURG aircraft factories. The case made in this dossier is the desirability of attacking the important fighter factories at these two places rather than attacking the oil refineries at Ploesti with the special American heavy groups which are being concentrated in North Africa.

2. As you know this decision to attack Ploesti was made at the urgent request of the American Chiefs of Staff. The C.A.S. would, I am sure, decline at this juncture particularly to suggest any reversal of this plan.

3. I have discussed the matter with the C.A.S. who considers that you should see the dossier immediately. You may feel compelled to make a suggestion to your higher authorities that we should be wise to divert these attacks from Ploesti to the fighter factories mentioned. If you did and the matter were referred to the British Chiefs of Staff I am sure that you would have the support of the C.A.S.

4. The information indicating the greatly increased importance of the two factories has only recently come to light. The latest estimate shows that production is respectively 160 plus and 170 Me.109s per month for these factories. Whereas our Intelligence Staff originally calculated that these factories contributed a combined total of 37.5% of

all/

Major General Ira. C. Eaker,
Commanding General,
Eighth Air Force.

5-2405-3

#4

THIS PAGE IS UNCALSSIFIED

all German fighter production they now estimate the contribution to be 48.5%.

5. The Combined Bomber Offensive plan submitted to the Combined Chiefs of Staff envisaged in its four phases the destruction of 43% of the German fighter capacity by the 1st April, 1944. The two plants referred to above were not specifically included in this plan. From the latest trend it is clear, however, that they should certainly be attacked. While normally they would fall within the fourth phase, i.e. 1st January to 1st April, 1944, it is most desirable, in view of their increasing importance, to attack them earlier. If we are to overcome the German fighter force it is essential that we seize every opportunity that is offered to us.

6. We have such an opportunity now. At one stroke, and probably with negligible losses, it is within our power to achieve what otherwise would require 9 months of heavy fighting, expensive in casualties. A large part of the forces required is already deployed in North Africa. The tactical problems involved in a successful attack appear considerably simpler than those of the "TIDALWAVE" operation.

7. The potential advantages of the attack on Ploesti are not immediate and the prospects of success are not great. Even if it were successful it might well have an adverse effect on our strategy. It would probably result in immediate pressure from Washington to divert our bomber forces from their immediate and essential task of destroying the German fighter force to the attack of synthetic oil plants in Germany.

8. Even if we are unable to divert the operation from Ploesti to the aircraft factories we might at least be considering the desirability of delivering such attacks as soon as possible after the Ploesti attacks with the forces available in North Africa.

9./

THIS PAGE IS UNCALSSIFIED

9. If you regard the case made in this dossier favourably I would be very glad to come out and discuss with you ways and means of implementing the recommendations.

10. May I have the dossier back by safe hand.

Yours sincerely,

Norman Bottomley /s/

THIS PAGE IS DECLASSIFIED IAW EO 13526

 MOST SECRET

ATTACK ON WIENER NEUSTADT/REGENSBURG AND PLOESTI.

Despite the fact that the Combined Chiefs of Staff have given their blessing to SOAPSUDS and that 3 Bomber Groups have been diverted to Africa in order to assist in carrying out this operation, it is considered advisable, even at this late date, to put before the Chiefs of Staff the merits of attacking alternative targets at Wiener Neustadt (and Regensburg), as suggested in A.C.A.S.(I)'s minute dated 28th June, 1943.

2. The main reason for this suggestion is that the strategical advantages of the SOAPSUDS operation, as compared to the advantages of an attack on Wiener Neustadt and Regensburg, have not been carefully considered in the light of the new G.A.F. Directive recently issued by the Combined Chiefs of Staff. An additional reason is afforded by the tactical difficulties likely to be encountered in the proposed operation against Ploesti, as compared to an attack on Wiener Neustadt and Regensburg.

WIENER NEUSTADT AND REGENSBURG.

3. The main argument advanced for requesting the Combined Chiefs of Staff to accord (in the new G.A.F. Directive) the highest priority to attacks upon the German Fighter Force was the necessity of reducing the enemy's fighter defences, now rapidly increasing in strength, before other types of objective could be attacked without prohibitive loss.

4. Wiener Neustadt and Regensburg, two of the most important fighter aircraft assembly plants in Germany, are at extreme range from our home bases. For this reason it is unlikely that they could be successfully attacked from this country, at least for several months; although, taken together, they produce at least 48% of all Single Engine Fighters available to Germany.

5. A successful attack on these two centres of production would in itself go a long way to ensuring the success of the G.A.F. Directive, namely, the crippling of the German fighter force. This would lay open to attack not only Ploesti but also the synthetic oil plants - and indeed key targets of all types in Axis Europe.

PLOESTI

6. An attack upon Ploesti before the above condition is fulfilled offers a high risk of proving a costly failure. But if the proposed attack on Ploesti is even partially successful, consequences which would be still more prejudicial to the success of the G.A.F. Directive, may develop. For inevitably, if Ploesti has been appreciably damaged, strong pressure will be brought to bear by Washington to switch all available forces to the attack of the synthetic oil plants in Germany. If, however, the object of the G.A.F. Directive has not yet been achieved, and the German fighter force is still growing, we shall feel as much urgency as we do now to devote our main effort to G.A.F. targets. In that case, we shall find ourselves trying to kick two balls along at the same time, which must result in a fatal dispersion of effort at a most critical time.

7. The growing strength of the German fighter force constitutes a most serious threat to the strategic bomber offensive both by day and by night. The only excuse for deviating from our present aim would be that the destruction of a large percentage of the refineries at Ploesti would seriously reduce the supplies of aviation spirit available to the G.A.F. The M.E.W., however, report that "whatever the effect this raid may have on German oil supplies, it is certain that they will

/be ....

be allowed to fall last of all on the G.A.F., and more particularly on its fighter force. Even if the operations should be so successful as to produce an effect on the enemy's supply of aviation fuel, it would represent a very indirect method of attacking the enemy's fighter strength, an infinitely less direct and certain method than the attack on key aircraft factories."

TACTICAL ASPECTS

8. Comparison between the G.A.F. objectives at Wiener Neustadt/Regensburg and Ploesti favour the former targets for the following additional reasons :- At Wiener Neustadt/ Regensburg

(i) The range is nearly 200 miles shorter,

(ii) Fighter opposition en route and in the target area is likely to be on a far lower scale, and would probably be negligible.

9. An extremely strong and well organised defence system in the form of heavy and light flak, balloons and possibly smoke-screens has been set up to protect the Roumanian oil fields at Ploesti. Ground defences at Wiener Neustadt/Regensburg appear, on the other hand, to be relatively weak.

10. In view of the recent successes of American Fortresses and Liberators against strongly defended targets in North-west Germany, it is considered that an attack on the targets at Wiener Neustadt and Regensburg could be carried out with the expectation of complete success.

11. Under the G.A.F. Directive we are already committed in principle to an attack upon Wiener Neustadt/Regensburg. But if this attack is carried out from this country, it must be routed across the strongest defensive zone in Axis Europe. If, however, the attack is carried out from North Africa, it can reach its objective after crossing a zone which is almost destitute of organised ground or air defences. Hence an additional consequence of executing these attacks from North Africa will be to confront the enemy with the problem of spreading his defences to cover the whole of South and Central Germany and Austria against attack from the South. This will entail diversion of fighter strength, flak and R.D.F. resources from N.W. Europe, Russia and the Mediterranean.

AIRCRAFT

12. It is suggested that the precise targets at Wiener Neustadt and Regensburg should be attacked in daylight by a strong force of American aircraft of the M.A.C., reinforced by American aircraft from the U.K. The employment of incendiaries by these forces would also enable the R.A.F. heavy bombers to operate by night, subject to suitable weather conditions.

CONCLUSIONS

13. It is recommended that despite the advanced stage of the proposed operation SOAPSUDS, the advisability of attacking the fighter assembly plants at Wiener Neustadt and Regensburg should be put forward to the Chiefs of Staff, either :-

(1) as an alternative to the SOAPSUDS operation, or

(2) as an operation to be carried out after HUSKY but before SOAPSUDS.

/s/ A.S. Torley (?)
W/Cmdr.

M. 173/43

MINUTE SHEET. Air Ministry File No.

D.D.I.(3), through D.D.I.(2).

Wiener Neustädter Flugzeugwerke, Wiener Neustadt.

The output of the above factory is at present estimated at 160 Me.109's per month. The factory airfield was covered (partial cover only) for the first time on 14.4.43, when many single-engined fighters were visible. In addition to manufacturing Me.109's the factory supplies certain components, notably control surfaces, to the Messerschmitt works at Regensburg, Bavaria, who are also large manufacturers of the Me.109.

It is possible that there is a second aircraft factory in Wiener Neustadt belonging to the same Company, but details of its production are not known.

Reports have been received that there is also in this area a new Messerschmitt factory at Fischamend, which lies south east of Vienna and is about twenty eight miles north west of Wiener Neustadt.

At Schwechat airfield, two and three quarter miles west of Fischamend Markt, there is believed to be a new Heinkel factory under construction.

#6

ATTACK ON WIENER NEUSTADT AND PLOESTI

The distances of the targets from Tunis measured in a straight line are as follows:-

Wiener Neustadt	820 miles
Ploesti	1,000 "

2. Opposition likely to be encountered is estimated as follows:-

(a) Wiener Neustadt. The direct route crossing the W. Italian coast in the vicinity of Rome. Opposition by G.A.F. S.E. fighters in this area is likely to be very slight since there is only a small detachment of 5-10 aircraft at Rome.

It is estimated that the I.A.F. S.E. fighter force in this area amounts to 50 aircraft, and routine patrols by 3/5 aircraft are flown at intervals throughout the day. Assuming that warning of the approach of Allied aircraft were received, it is likely that up to 15 fighters would operate, of which only a small number if any would establish contact with the Allied aircraft.

Over the remainder of the route to the German Frontier only opposition by Italian aircraft is likely and this would be negligible.

From the Frontier onwards no organised G.A.F. fighter defences are believed to exist, although a few isolated aircraft might conceivably operate in emergency but are likely to be ineffective.

In the target area there are certain to be fighter aircraft and a few experienced test and operational pilots who might operate. Their effort is however likely to be of poor quality owing to lack of readiness and of any fighter control organisation so far as is known.

On the return flight opposition is unlikely to differ materially from that experienced on the outward journey.

(b) Ploesti. The direct route from Tunis lies across the most westerly point of Sicily, but assuming our aircraft skirted this area by 20-30 miles interception might be entirely avoided.

Landfall on the W. Italian coast would probably be in the area of the Gulf of Policastro, where no fighter opposition is likely.

The East coast of Italy would be crossed about mid-way between Bari and Brindisi. In this area Axis fighter strength is estimated at:-

G.A.F.	90-100	aircraft (Brindisi-Lecce Area)
I.A.F.	40- 50	
TOTAL	130-150	aircraft

The scale of effort is estimated at 30-40 G.A.F. and 15-20 I.A.F. sorties.

Thereafter the journey is likely to be uneventful across the Balkans until reaching Roumania.

The G.A.F. fighter defences of Roumania are at present estimated at:

/S.E.

S. E. Fighters	50	Me.109G. Bucharest Area
T. E. Fighters	10	Zilistea
TOTAL	60	aircraft

In addition there are Roumanian fighter forces equipped with Me.109's and Me.110's estimated at:-

S.E.F.	40	
T.E.F.	10	
	50	aircraft

The fighter defences of the Roumanian airfields are in process of development and are believed to include an R.D.F. network in addition to a Fighter control organisation. G.A.F. night Fighter control may function in an area within 100 miles radius of Bucharest. Consequently the available fighter forces might be expected to operate with considerable efficiency, limited, however, by lack of operational experience.

The scale of effort likely to be encountered in the target area is estimated at:

	S.E.F.	T.E.F.	Total Sorties
G.A.F.	40	5	45
Roumania	20	5	25
TOTAL	60	10	70 sorties

Opposition on the return journey on the same route would be similar to that encountered on the way out.

3. Conclusion

Comparison between the two objectives appears to favour Wiener Neustadt as a target for the following reasons:-

(a) The range is nearly 200 miles shorter.

(b) Fighter opposition en route and in the target area is likely to be on a far lower scale and would probably be negligible. In contrast a well organised defence system has been set up to protect the Roumanian oilfields although it has not yet been put to the test.

A.I.3.(b)
26.6.43

M.I. 14(E)/Z/GEN/2436

D.D.I.3.

WIENER NEUSTADT Aircraft Factory.

Although this target was covered by photographs on 14 Apr last, unfortunately the immediate neighbourhood is cloud covered and the fact that no Flak is shown round the above works does not necessarily imply that there is none there. Enclosed is trace showing the Flak positions interpreted from photographs of this Sortie.

Information from ground sources has been meagre. There were two reports dated last Sep; one stating there were no Flak guns here and the other that there was a small number of Flak M.Gs. On the other hand two reports from A.A. BERNE dated last October, stated that the factory was strongly defended by Flak. The only information from MOST SECRET Sources on this area is dated Jun 1942 and places a HEERESFLAK Abteilung (8 heavy and 18 light guns) here.

This being an Army formation it is unlikely to have remained; but an equivalent formation may have replaced it which would leave 4 heavy and 9 light guns unaccounted for. These may be sited near the target.

Concerning the route. We presume TUNISIA would be the starting point, and consider that A/C on a course across Italy making landfall at Pt CIRCEO (41° 12' N., 13° 04' E.) to S. BENEDETTO (42° 55' N., 13° 55' E.) thence direct to target should be free of interference by ground defences.

PLOESTI

We would refer to an appreciation of the Flak defence of this area with trace showing barrage balloon positions, prepared 4 Jun 1943 for A.I.3.c, a copy of which was sent to you for information under reference No. M.I. 14.e/Z/Gen/2342.

The only additional reliable information received since that date is that there are 12 light guns in the MORENI district 30 kms W.N.W. of PLOESTI.

/s/ (Undecipherable)

Squadron Leader

M.I. 14.E.
EXT: 1091
26 Jun 43

FLAK DEFENCES OF PLOESTI

A reliable report stated that in February/1943 there were in Roumania under German control 172 heavy and 416 light guns. Further heavy guns had been promised by the Germans. It is not known what proportion is allocated to the defences of PLOESTI, but it is considered that about 2/3 would be used for the defence of the oil installations in general. During 1942 and the early part of 1943 German personnel were being withdrawn and replaced by Roumanians. It is believed that this procedure was not much acted upon and was definitely suspended in the middle of April.

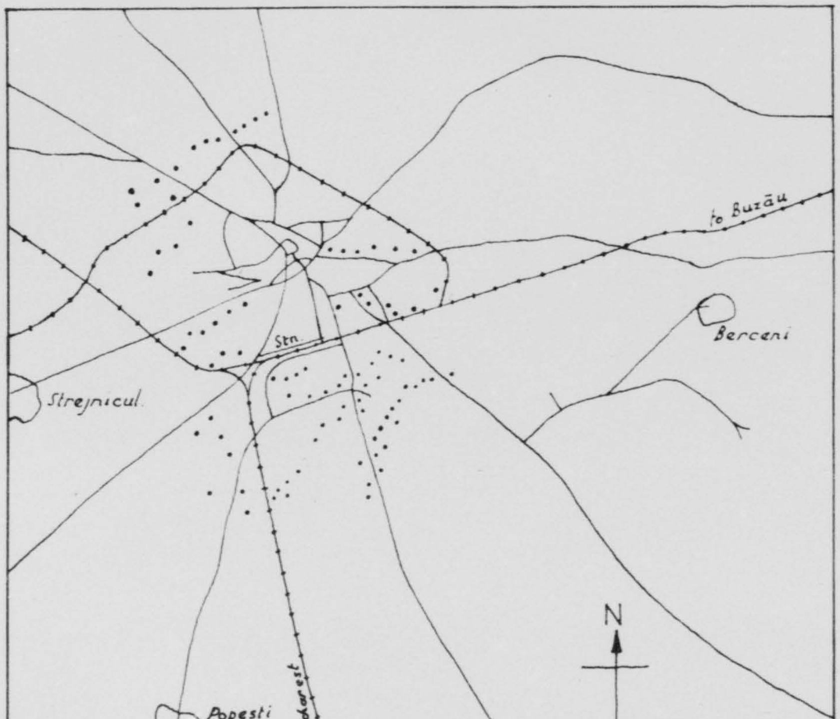
There is no definite information as to the total number of guns in this area, but from that available, it is estimated that the defences of PLOESTI consist approximately of 80 heavy and 160 light guns. Of these the following are definitely located :-

ROCHIERI PLOESTI (west exit of town) 12 heavy guns 16 light guns, CHITPRANI PLOESTI 12 heavy guns 16 light guns, STREJNICUL (3½ mi. s.w. PLOESTI) 12 heavy guns 16 light guns, BARCANEJCII (4 mi. S. PLOESTI) 12 heavy guns 16 light guns.

The following have been reported:-

At each of the Cross roads where the new By-pass to BARCONESTI running N.W. crosses the roads running S.S.W. and W.S.W. from PLOESTI West Station - 3 guns.

PRAHOVA Valley - considerable defences
TERGOVISTA - considerable defences
2½ Kms E. of PLOESTI South Station - 4 guns.



A certain number of the heavy guns are known to have equipment for "unseen" fire control.

PLOESTI has a very strong balloon barrage, there are probably about 100 in this area. One report states that 60 are in a semi-circle round the south outskirts of the town, and on the PLOESTI side of BUZAU along the railway several oil wells had balloon protection. It is unlikely balloons will be met above 8000' - one report does state that 50 balloons can fly at 13,000', but this is improbable.

A copy of trace received from a reliable source giving the sites of balloons last September, is attached.

S.2020/A.I.3c(1) MOST SECRET

ATTACK ON WIENER NEUSTADT
FROM TUNIS

1. Distances

WIENER NEUSTADT, probably one of the most important centres for the production of G.A.F. fighter aircraft (Me.109's), is situated about 28 miles south of VIENNA.

It is a comparatively small town having a population of about 40,000 and the most important industrial concern in the town is the WIENER-NEUSTADTER FLUGZEUGWERKE Aircraft Assembly Works.

According to latest estimates of Aircraft Production (at June 1st 1943) these works are producing 160- Me.109's per month which represents:-

35.7% of the total production of Me.109's (total 450/month)

23.5% of the total production of single engined fighters (Me.109's and FW. 190's) (total 680/month)

18.2% of the total production of fighter aircraft, both single and twin engined) (total 880/month)

The small map attached at Appendix A shows the approximate location of the town from various bases, and, for comparative purposes the Oil producing centre of PLOESTI is also shown.

The approximate distances are as follows:-

BASE	WIENER-NEUSTADT	PLOESTI
MILDENHALL	760 miles	1,300 miles
TUNIS	850 miles	1,040 miles
BENGHASI	1140 miles	970 miles

The location of the town in relation to Vienna is shown at Appendix "B" and the main Aircraft and Aero Engine Works between the two are as follows:-

(a) The Fighter Aircraft Assembly Plant of the WIENER NEUSTADTER FLUGZEUGWERKE G.m.b.H. situated in the northern part of the town of WIENER NEUSTADT and about 28 miles South by West of the centre of VIENNA.
The Operational Target Number is GY.4808A

(b) The Aero Engine Factory of FLUGMOTORENWERKE OSTMARK G.m.b.H. situated at WIENER NEUDORF a suburb of VIENNA about 11½ miles South by West of the centre of VIENNA.
The Operational Target Number is GY.4690

(c) The Fighter Aircraft Assembly Plant of the WIENER NEUSTADTER FLUGZEUGWERKE G.m.b.H. reported at FISCHAMEND about 15 miles Southeast the centre of VIENNA
The Operational Target Number is GY.4850

(d) The Aero Engine Factory of FLUGMOTORENWERKE OSTMARK G.m.b.H. at KLEDERING about 6 miles South South East of the centre of VIENNA.
The Operational Target Number is GY.4689

It should be noted that (c) and (d) are reported only and no aerial cover exists at present to give confirmation. It appears possible that the KLEDERING and WIENER NEUDORF Factories (GY.4689 and 4690) may be one and the same.

However ---

THIS PAGE IS DECLASSIFIED IAW EO 13526

However there appears to be little doubt that the WIENER NEUSTADTER FLUGZEUGWERKE G.m.b.H. at WIENER NEUSTADT (GY 4808A) is by far the most important Aircraft Works in the neighbourhood.

The factory forms one of a group of three targets of which the other two are:

(B) The STEYR-DAIMLER PUCH A. G. Lorry Works

(C) The HENSCHEL & SOHN Locomotive Works.

all as indicated on Target Map 3 (e) 67 at Appendix C from which it will be seen that the WIENER NEUSTADT Works are adjacent to a Factory Airfield.

2. Opposition

No definite information is available regarding the defences of the target. It is possible that due to its distance from British bombing bases (760 miles) no very strong defences may be provided. There are however two airfields within a mile and a half of the works. At Ploesti on the other hand it is known that considerable defences, balloon barrage etc. are present.

3. Vulnerability

The aircraft assembly plant is probably of conventional design comprising a number of large assembly halls probably of comparatively light construction with steel framework and concrete or breeze fillings. Subject to obtaining expert views on this matter it would appear that 500 lb.H.E.bombs with a fair percentage of I/Bs. would be the best to use against a target of this type.

4. Output

The question of estimated output of Fighter Aircraft from the WIENER NEUSTADT Works is dealt with in section 1 above. It is possible that the total output figures for the Wiener Neustadter Flugzeugwerke group may be produced partly in the WIENER NEUSTADT Works (GY.4808A) and partly at the FISCHAMEND Works (GY4850) although in the absence of aerial cover of the latter it is not possible to make any estimate of its importance. There seems little doubt however that the Wiener Neustadt Works is the more important of the two.

5. Navigation and Identification of Factory

As will be seen the straight N.E. route from Tunis constitutes

(a) a flight of about 350 miles over the sea to a point on the West Coast of Italy somewhere near Rome.

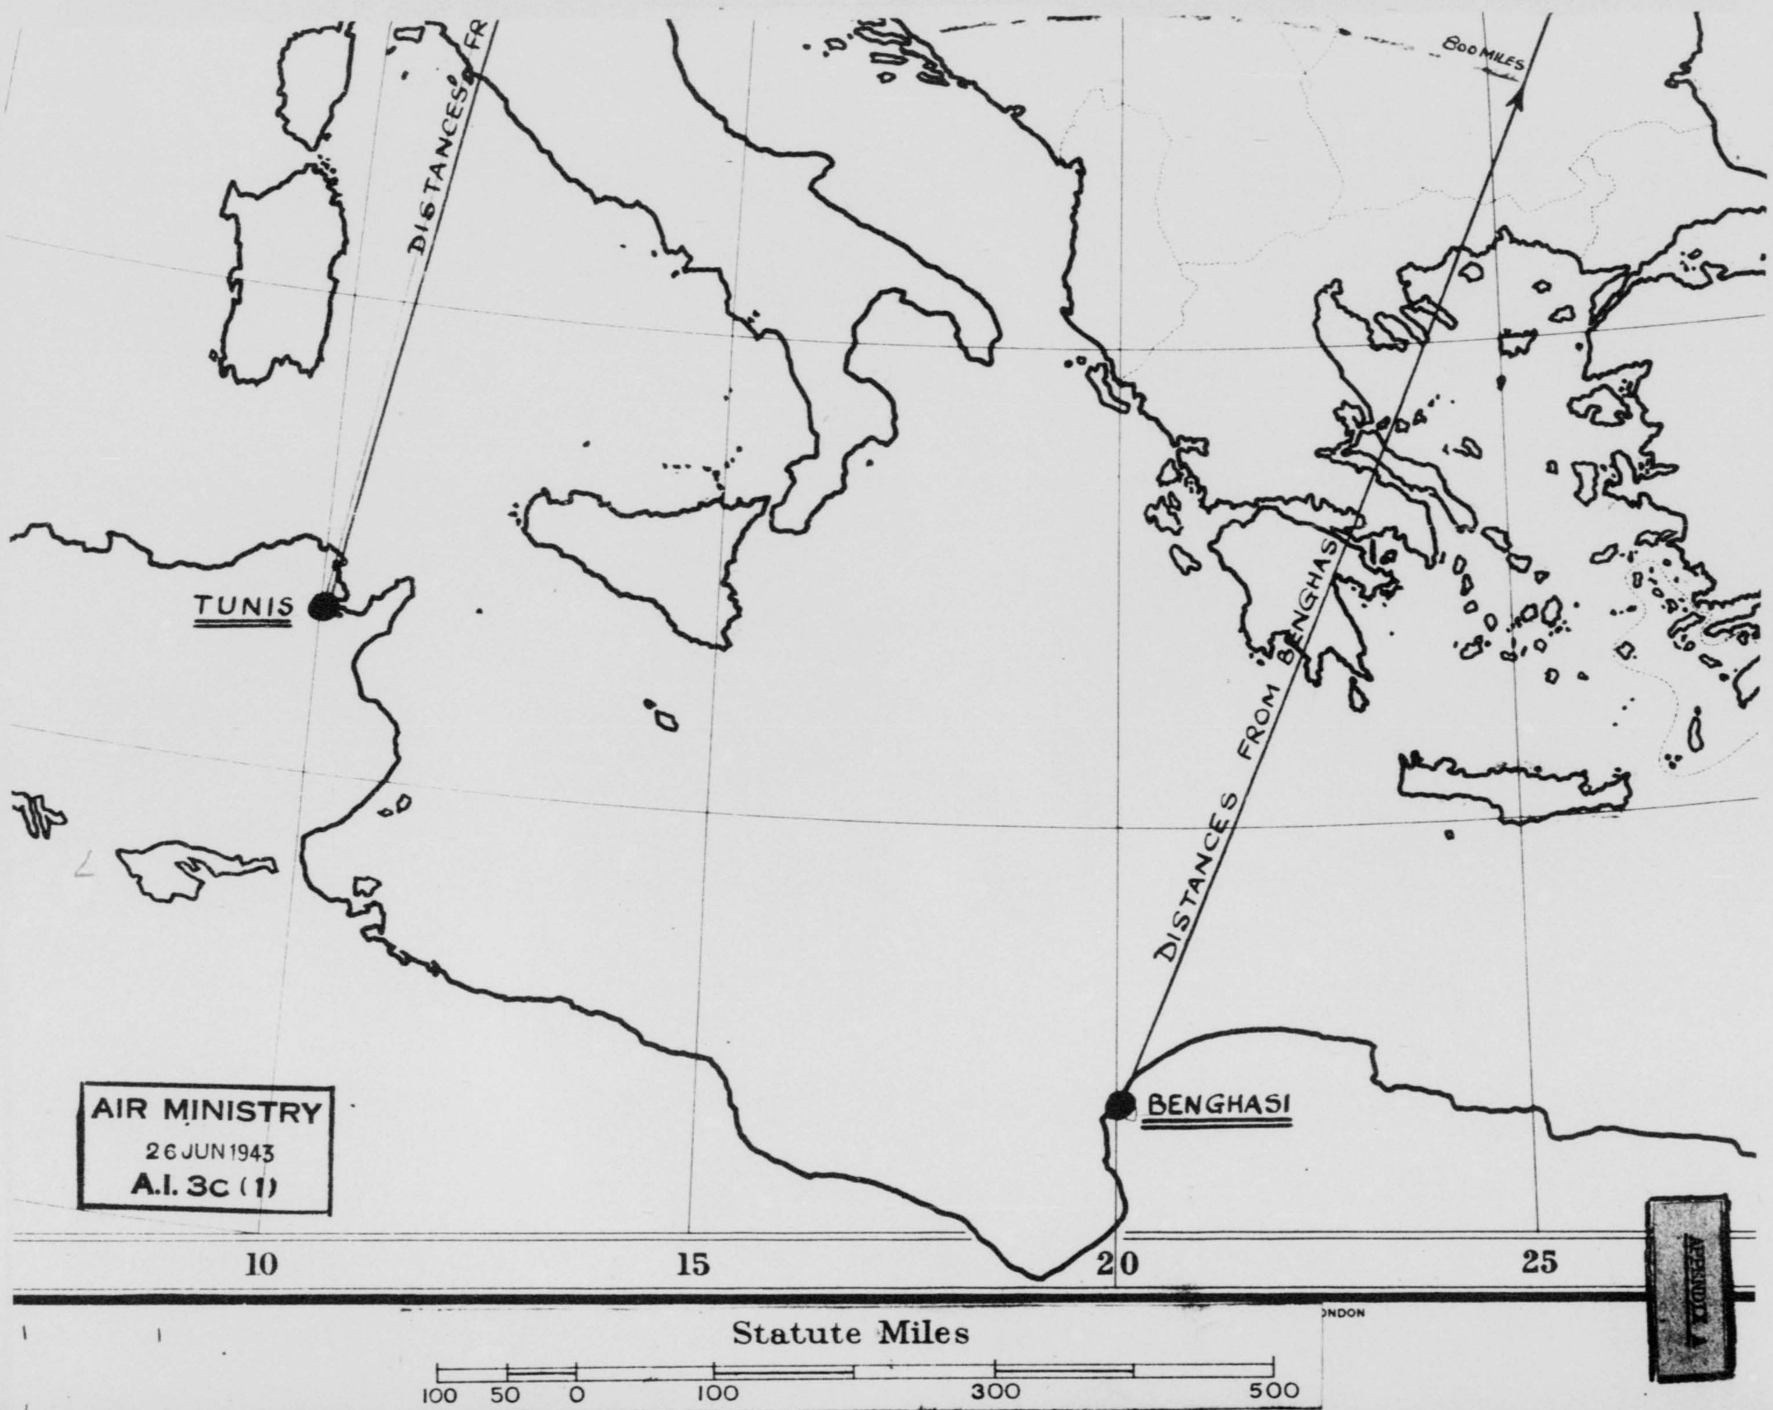
(b) a flight of about 170 miles across Italy to the east (Adriatic) Coast a little north of Ancona, crossing the Appenines on route

(c) a flight of about 90 miles over the north end of the Adriatic to Jugoslav coast near the frontier with Italy.

(d) the remainder of the journey about 230 miles - is across Jugoslavia and eastern Austria which is not too mountainous.

The target has no special landmarks although if the aircraft are on the course they should have no difficulty in picking out the town of Wiener Neustadt which is the only one of its size in the neighbourhood provided they do not mistake Graz en route. The target lies to the north of the town adjacent to the large factory airfield.

It should be possible to work out a satisfactory routing for the aircraft and this can be done later if required, the above notes being only intended to give a very brief picture of the route.



On a "shuttle" basis the total route mileage MILDENHALL-WIENER NEUSTADT-TUNIS is about 1610 miles which is considerably greater than the recent successful ENGLAND-FRIEDRICHSHAFEN-N.W. AFRICA flight, Wiener Neustadt being over 300 miles east of Friedrichshafen.

American SECRET
British MOST SECRET

June 21, 1943.

MESSERSCHMITT A.G.

at REGENSBURG

I. Location

Latitude 49° 01' 25" N. Longitude 12° 03' E. 1½ miles due E. of the center of Regensburg on the Danube River. 550 miles from Mildenhall.

II. Importance

The Regensburg plant of Messerschmidt is currently believed to produce about 100 Me.109Gs monthly, or more than ¼ of the fighters of this type and between 1/6 and 1/7 of all single-engine fighters. Together with the Erla Maschinenwerk plant at Leipsig, it is tied for second place among all the German factories producing single-engine fighters; the Wiener-Neustadter plant, located some 750 miles from Mildenhall is the only factory assembling a larger number of fighters each month.

In addition to assembly, the Regensburg plant manufactures most of the components assembled into its planes, and possibly a few for Me.110s and Me.210s assembled by other Messerschmitt plants or licensees. Further investigation is being made of the subject, but current evidence points to the conclusion that Regensburg is all but self-sufficient in the manufacture of airframe components for its own assembled planes.

III. Target Analysis

A. General Layout

The plant consists of a compact group of buildings located at the southeast corner of the airfield, which is in turn bounded on the northwest by the Danube River. A railroad enters the plant along the western edge of the site.

B. Structural Features

All important buildings of this complex are of the onestory shed type - the roofs are flat or with a very low pitch. Height to eaves are low, 15 to 20 ft. Hangar Shed No. 3 under construction shows two wood trusses on ground and shed No. 25 partially roofed shows a longitudinal truss at top of outer stanchion typical of wood frame construction. It is likely therefore in view of the apparent uniformity of buildings that all are fully framed in wood with ring connections and covered with sheeting. The roof trusses are likely to span the whole width of the building (100 to 150 ft.).

It must not be inferred that the structures are particularly combustible since heavy wood members are relatively fire resistant although once alight they allow fire to spread. Fire vulnerability depends in this case on contents of a low order of combustibility, and on nature of flooring and sheeting, on which no information is available.

Structurally speaking, the buildings constitute a good target for H.E. The size of the buildings suggests that they are vulnerable to spreading collapse from confined blast of sizeable bombs.

C. Functions of Individual Buildings

The identification of the functions of separate buildings is based upon the recollections of a Messerschmidt engineer who worked in the plant

as late as December 1939. Since that time, however, considerable expansion has taken place. The functions of the newly constructed buildings have been deduced from the logic of the earlier layout. As such, they are subject to a considerable possibility of error, which may be compounded if functions have been rearranged among pre-1940 buildings as new structures were brought into operation.

The list of functions is contained in the key to the accompanying plan.

D. Primary Target Area (colored red)

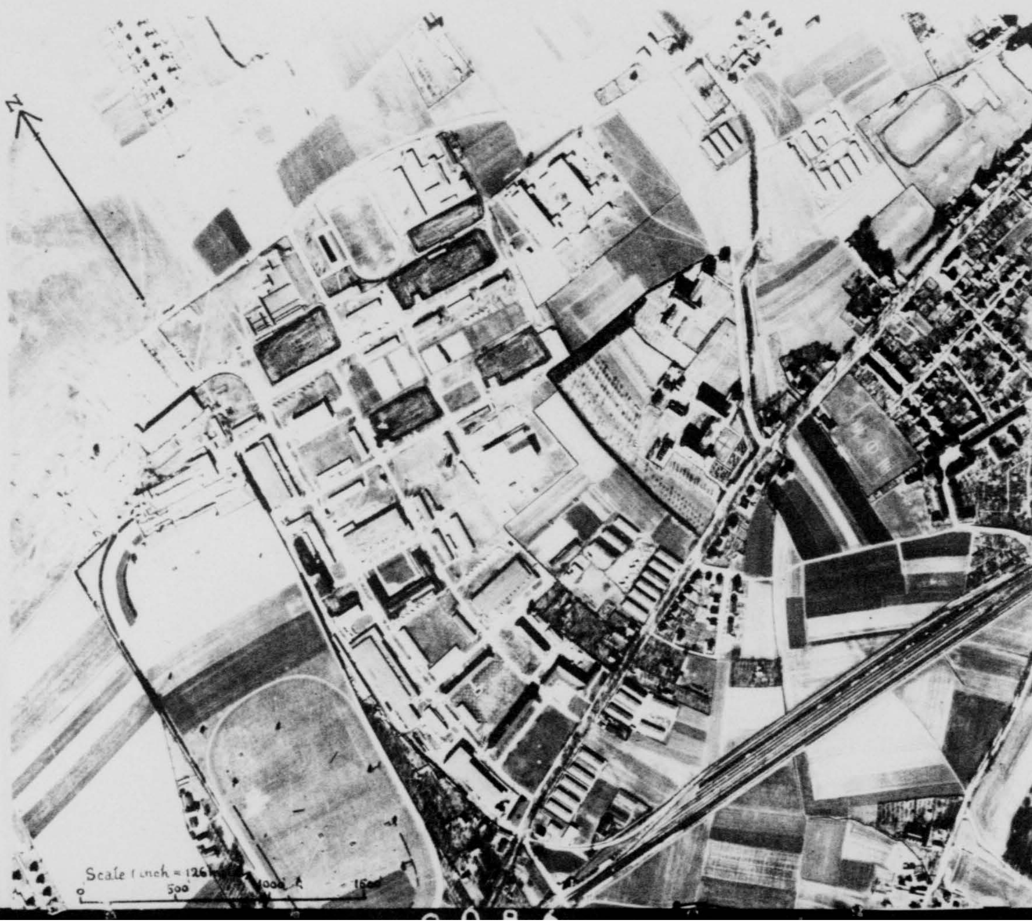
The compact character of the plant enables the inclusion of the three most significant processes of airplane manufacture in the primary target area: final assembly (which recovers rapidly but contains the most nearly complete planes); component erection (using jigs which may require a considerable period to replace) and metal shaping and forming, again dependent upon equipment difficult to replace. The four buildings known to be engaged in these functions in December 1939, together with another which appears very likely to be an addition to the component erection shop, are therefore selected as primary objectives:

Building	Function	Dimensions
Building 7	Final assembly	160 x 335 50 x 200
Building 16	Component erection	145 x 510 15 x 60
Building 17	Possible component-erection	95 x 380
Building 11	Machine and press shop	140 x 310 15 x 55 15 x 55
Building 12	" " " "	140 x 310 15 x 60 15 x 60

E. Secondary Objectives (colored blue on plan)

The remaining substantial buildings known to be or likely to be productive and the hangars housing finished aircraft go to make up the secondary objectives of the plant.

These with their dimensions are as follows:



Building	Function	Dimensions
Building 1	Flight hangar	100 x 310 35 x 155
Building 3	" " (under construction)	100 x 310
Building 4	Armament shed	35 x 320 85 x 105
Building 23	Machine or subassembly shop	140 x 310 45 x 95 15 x 60
Building 44	Subassembly shop	140 x 310 15 x 110 15 x 60

IV. Anticipated Results of Attack

The destruction of Building No. 7, the final assembly shop, may be expected to result in the loss of 35-45 planes or fuselages undergoing assembly, and would halt further final assembly for a period of 1 month. The destruction of component erection carried on in Building 16 and possibly in building 17, would be likely to eliminate 50 sets of wings and fuselages in place in jigs at one time, and set back production for 3 months if the jigs were not repairable. Loss of the machine tools in buildings 11, 12 and possibly 23 would affect possibly one week's work in process, but delay production for at least six months while presses were being replaced, unless presses in other plants were diverted from work of lower priority. Even the latter process, however, would probably interrupt production for one or two months while the new arrangement was being made.

The simultaneous destruction of all the principal objectives may be expected to result in a nine months delay in Messerschmitt 109 production at Regensburg, although the transfer of skilled workers to other plants at which labor is the limiting factor will provide a slight offset to this loss.

SECRET GERMANY NOT TO BE TAKEN INTO THE AIR

INFORMATION SHEET dated: 14th June 1943

Op.No. GY 4828 PLACE: REGENSBURG Lat: 49° 01' N.

A.M.No. 3(e) 53 CATEGORY: Air Armaments Long: 12° 04' E.

DISTRICT TARGET MAP No: 95a SUB-CATEGORY: Principal Airframe Factories Altitude: 1120 feet

---

ALL PREVIOUS INFORMATION SHEETS AND AMENDMENTS THERETO ARE CANCELLED

TARGET MAP: Standard 1941 (magnetic) map dated: 3rd May, 1943.

DESCRIPTION: The target is the FIGHTER ASSEMBLY FACTORY of MESSERSCHMITT A.G. at REGENSBURG (marked "A" on the map) together with the factory airfield (marked "B" on the map).

The factory and airfield adjoin, and stand some two miles due West of the centre of REGENSBURG town, being located on level ground on the southern side of, and within a marked bend in the river DANUBE near its confluence with the river NAAB. The rivers, together with the hemmed-in area of low-lying ground, are conspicuous landmarks.

The factory is reported to be greatly enlarged since the outbreak of war, and it is now stated to be devoted entirely to the production of Me.109's. The entire plant appears to be well laid out to ensure smooth flow of assembly. Power is obtained from one large boiler house. Nearby is the main store, and associated with it are four groups of buildings used for administrative purposes. There are at least seven workshops available for the assembly of aircraft and another large shop was under construction when the target area was last seen in April 1943. There appears to be one small and one large workshop used in connection with final assembly, and near the latter is a flight hangar with the test pilots' offices. There is one large gun testing range for aircraft in the vicinity, and west of this there is evidence of further constructional activity. (See detailed Illustration 3 (e) 53/7)

VULNERABLE POINTS:

CAMOUFLAGE: None observed.

AS UNCLE SAM'S FAR EAST WORRIES INCREASE

Strube © Cartoon. Underwood & Underwood and Elderman in The Washington Post

In the British cartoon above Uncle Sam tells Japan that the collection contains "my goods," to which Japan replies: "Pardon, honorable Uncle Sam, *it is now my collection*"; the American cartoon is "Who goes there?" The photograph shows Japanese troops in China.

BARS RAISED AGAINST US IN CHINA

Americans in Business Expect a Shutout if Japan Has Her Way

manding the channels of trade and economic activity and for levying tribute on all that passes. The North China Development Company and the Central China Development Company, heavily capitalized holding companies for these Japanese monopolies, have been functioning for several months. A South China Development Company is in process of formation. These are all related through the Special Service Section of the Japanese Army of Occupation, which also supports the various puppet regimes which have been set up.

Pressure by Japanese

Thus, while generally protesting to the world that they will maintain the open door of equal opportunity, the Japanese at the same time have been introducing here the same machinery by which they have sealed the door shut in Manchuria. Moreand certainly Japanese practices in North China and in the Shanghai area since August, 1937, contradict the statements of the Foreign Office. They know that officials of other departments of the Japanese Government, those in charge of the promotion of Japanese plans on the Asiatic Continent, have time and again openly declared their purposes here.

To the Americans who have thus for some time been close observers of the trend of events in the Orient, the whole future of American trade and cultural relations in the Far East depend upon whether Japan is permitted to succeed in her present attempt to subjugate China. For, in the first place, there is no necessity to believe otherwise than that Japan would be satisfied for China to remain as old China largely was, an agricultural country, a source of raw materials and a market for cheap Japanese manufactures. Under such circumstances there would be little or no necessity for the Japanese to invite participation of American or British capital in the development of China, for it takes no capital to do nothing.

If Japan Goes On

On the other hand, if Japan's military empire builders continue on their present course to achieve

PARIS, Dec. 23.—For a few bri hours last Sunday evening tho Russians who have lived for twent years in exile in Paris permitte themselves the luxury of revive hope as they did homage to Gran Duke Vladimir, the young ma who, they are agreed, should t their Czar.

He is an attractive young ma rather solemn for his years, dign

of formation. These are all related through the Special Service Section of the Japanese Army of Occupation, which also supports the various puppet regimes which have been set up.

Pressure by Japanese

Thus, while generally protesting to the world that they will maintain the open door of equal opportunity, the Japanese at the same time have been introducing here the same machinery by which they have sealed the door shut in Manchuria. More-

HIS EYES ON CHINA

Emperor Hirohito of Japan.

over, it is known that they have been and now are applying pressure to important manufacturers and exporters in the United States to turn over to Japanese their agencies for the China area, with the implication that otherwise trade cannot be carried on. To Americans here the suggestion that there are, or under the circumstances could be, Japanese who are eager to promote the sale of American or other non-Japanese goods in the China market is unconvincing. They suspect that the real intention back of this move is, by displacing the present American agents and representatives of American manufacturers and exporters, to gain a strangle hold on American trade with China. In the opinion of Americans here, to consider entrusting America's China trade to Japanese agents would be equivalent to contemplating commercial suicide.

Two Wars Seen

Among Americans who have witnessed the development of Japanese activities in China, it is a common saying that Japan is waging two undeclared wars, one against the Chinese people and the other against foreign business, especially British and American. To them it is obvi-

Far East depend upon whether Japan is permitted to succeed in her present attempt to subjugate China. For, in the first place, there is no necessity to believe otherwise than that Japan would be satisfied for China to remain as old China largely was, an agricultural country, a source of raw materials and a market for cheap Japanese manufactures. Under such circumstances there would be little or no necessity for the Japanese to invite participation of American or British capital in the development of China, for it takes no capital to do nothing.

If Japan Goes On

On the other hand, if Japan's military empire builders continue on their present course to achieve world hegemony, it is conceivable that Japan would lure as much foreign capital into China as possible for the sole purpose of establishing a military-economic regime based on China's abundant raw materials and cheap labor in order to drive the manufactures of every other producing nation not only from China markets, but from every other world market. Business men here believe that it would be fatal to aid Japan in this purpose.

Americans in Shanghai do not believe it is necessary to engage in a war with Japan in order to maintain American rights in the Far East. Personally they would be in a very vulnerable position if such were to happen. They are cognizant, however, that Japan's past success as a commercial nation is overwhelmingly due to her large American market, principally for silk, and that her plans at least for the immediate future are greatly dependent upon her ability to continue to exchange her products for American-made war materials and supplies, without which her campaign of aggression in China would fail tomorrow.

If U. S. Stands Fast

Under such circumstances, it is believed here, a strong attitude on America's part would compel Japan to respect American rights and to modify her conduct and plans in China.

While modern China goes on fighting for the right to exist as a free nation, before Japan has seized the means of becoming economically independent of the American market and at the same time ruined our own bright prospects in the China market, America still holds a whip-hand. It is the hope of Americans living in China that the American public will continue to support the American government in its firm attitude toward Japan.

WHITE RUSSIA

German Plan for U
Nature of Vladir

By P. J. PHILIP

Wireless to THE NEW YORK TIMES.

PARIS, Dec. 23.—For a few bri hours last Sunday evening th Russians who have lived for twe years in exile in Paris permitt themselves the luxury of revive hope as they did homage to Gra Duke Vladimir, the young ma who, they are agreed, should b their Czar.

He is an attractive young ma rather solemn for his years, digni fied and correct in manner, as a aspirant to a throne should be. H father, Grand Duke Cyril, was i his early years too far remove from any hope of succession s that when eventually he was reco nized by most, if not all, of th Russians in exile as the rightfu heir of the Romanoff empire he di not seem fully to recognize his p sition and obligations.

Lack of money was, perhaps, on of the reasons. Cyril lived modest ly in Brittany and played gol That was the kind of life he woul always prefer, that of a countr gentleman of the English type.

Vladimir Is Ambitious

Vladimir has other blood in hi His mother was a sister of Quee Marie of Rumania. Through her h is a great-grandson of Queen Vi toria, and there is something of he Old World air of accepted superio ity in this young man who receive the homage of his fellow-Russian of whom a good many of th younger ones have, like himsel never seen Russia.

Sunday's celebration had a di ferent spirit from any in whic White Russians had ever joined b fore.

Perhaps it was the youth of th Grand Duke. More probably it w the rumors circulating that the Ge man plan for the creation of friendly group of Slav States, whic would rest more on the old ec nomic system by which Eastern an Central Europe lived, included th possibility of helping Vladimir to throne in the Ukraine.

Vladimir's own reply has been t the effect that he will take nothin less than the throne of all the Rus sias, but between the kind of thron a man will say he wants and wha he will accept when it is offere there may be a difference.

Apart, too, from rumors regard ing Chancellor Adolf Hitler's East

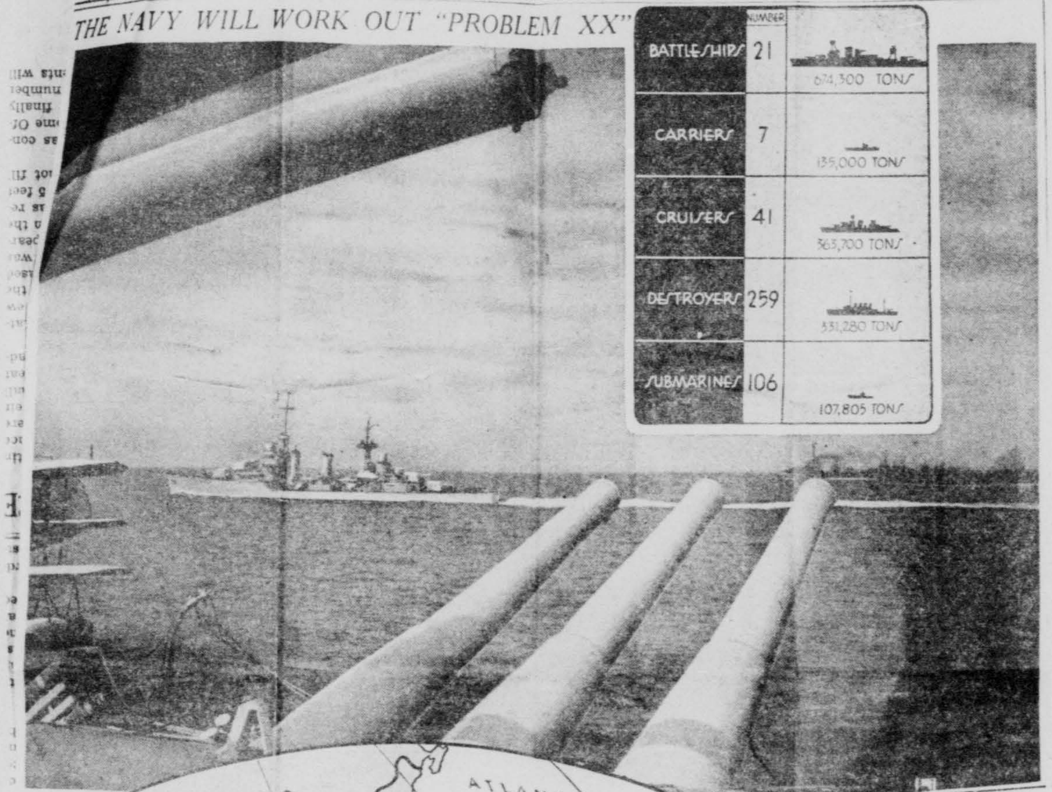
LONDON DEMOCRATIZES POLICE FORCE

Special Correspondence, THE NEW YORK TIMES.

LONDON—The old school-tie tradition in the London police force has just sustained a heavy blow from the decision to remodel the Police Training College at Hendon on more democratic lines. After four years of experiment it has been decided that experience in catching crooks is worth quite a lot of credits in the science of criminology, and although the college is to be retained, preference will be given to enterprising men from beats.

Hendon was established to do for the London police force what Sandhurst does for the army and Dartmouth for the navy—create officers who were "gentlemen." Over half the cadets had been to a public school, and some had been to one of the "Senior Universities," as well.

Unfortunately it early became known not only that Greek or Latin could be offered for the entrance examinations but that cadets were officially advised to bring their dress-suits with them. Music-hall comedians decided this was a great joke and promptly christened graduates "gentstables."



The non-gentleman constables naturally had no liking for the new system. Resignations from the London police force have increased steadily since the college was founded. The commanding appearance of the force suffered when the required height of recruits was reduced from 5 feet 9 inches to 5 feet 8 inches, but this still did not fill up the vacancies.

Abolition of the college was considered for a time at the Home Office, and although it was finally decided to retain it, the number of cadets with Oxford accents will be greatly reduced.

NAVIES TURN AGAIN TO THE ATLANTIC

Our Fleet and French, Too, Will Carry Out Manoeuvres There

By HANSON W. BALDWIN

The Atlantic Ocean will assume an increased significance in the world's naval strategy early next year when the fleets of two nations—the American and the French—hold extensive naval manoeuvres over a widespread area of the "Western Ocean."

Although the two war games are entirely independent and in no way coordinated, according to the Navy Department, announcements of the exercises almost coincided last week, and both American and French ships will be for a time in West Indian waters.

The principal strategical exercises of the United States fleet, known in the technical vernacular of the service as "Fleet Problem XX," will last from late January to mid-March, but the fleet will leave its Pacific bases at San Pedro and San Diego, Calif., soon after New Year's Day, possibly before, to steam southward to the Panama Canal.

Its sortie from West Coast bases, which will be made under simulated wartime conditions, will be guarded in secrecy until the last moment and so far no information as to the fleet's date of departure has been allowed to leak out (other than a cryptic notice that mail addressed to certain auxiliaries and vessels of the train must arrive at San Diego and San Pedro by Dec. 29).

Transit of the Canal

On the way south the fleet, commanded by Admiral Claude C. Bloch, will hold tactical exercises, and is expected to transit the heavily guarded Panama Canal in great secrecy and in great haste during the first week in January. It is possible that the fleet's record transit time of less than forty-eight hours established by 110 ships in the last "rush transit" in 1934, will be broken; in any case, the eyes of the world will be on the narrow link between two oceans as the locks and channels are filled brim to brim with men-of-war.

The West Coast ships will steam to Guantanamo Bay, Cuba, undefended American naval station leased from Cuba, where they will base until the beginning of the main problem. In that problem they will be joined by the new ships of the newly formed Atlantic Squadron, under command of Rear Admiral Alfred W. Johnson. This squadron will rendezvous at Norfolk soon after the New Year and later will sail south and east to join in the vast strategic game of war.

In all, a total of some 140 vessels, including auxiliaries, 500 to 600 planes (including the patrol squadrons based at Panama, Norfolk and elsewhere, and the Marine Corps squadrons) and some 53,000 officers and men will participate in the problem, which will be played out over a vast chessboard of ocean, limited roughly by the latitude of Norfolk on the north, mid-Atlantic on the east, the "hump" of Brazil on the south, and the coastline of the American Continents and the Central American Isthmus on the west. The area will be approximately 4,000,000 square miles and will include such strategic regions as all of the West Indian islands and the Caribbean Sea, Bermuda, and our important ports and naval stations in the Southeastern United States.

The problem is again to involve the defense of the eastern approaches to the Panama Canal, but despite the recent emphasis put upon "hemispherical defense" and the strategic solidarity of the two American continents, the men-of-war participating are not expected to visit any South American ports or to operate very near South American waters. The mimic war will center around Puerto Rico, where a new naval and air base will probably soon be provided for, and around the near-by Culebra-Virgin Islands area, with Guantanamo Bay playing a secondary strategic rôle.

A Black Fleet, the defending navy, under Vice Admiral Adolphus Andrews, will oppose an attacking White Fleet under Admiral E. C. Kalbfus, with Admiral Bloch acting as director of the problem and chief umpire. The "enemy" force, it is understood, will approach the Southeastern Coast of the United States or the West Indian area in an attempt to seize an advanced base for subsequent operations against the Panama Canal, and the defending force will attempt to wage a war of attrition, delaying the approaching fleet.

The Fleet Marines

The Fleet Marine Force from Quantico, plus ships under Admiral Johnson, will conduct landing force exercises and base defense problems during and after the main fleet problem. When the problem is finished some of the ships will return to West Coast bases for overhaul, but the majority will remain in the West Indian area. They will be distributed at intervals throughout almost all of the West Indian islands for recreational purposes, and visits will be made to Barbadoes, Trinidad, etc. After the main war games, gunnery exercises and tactical problems will be conducted prior to the fleet's visit to New York in late April and early May for the opening of the World's Fair.

Thus, for the first time since the World War when the United States turned her face westward, American sea power is again looking upon the Atlantic and the Caribbean as oceans of great strategic consequence. The rapid rise of Germany and Italy as sea powers, the spectacular victory of Germany at Munich and the solidarity of the Fascist nations, as well as their pushing policies in South America, have now forced us to look again to the East. But the forthcoming manoeuvres—though widely interpreted as an "answer" to recent events in Europe—were actually planned as a routine part of the fleet's training year long before Germany pushed into Czecho-Slovakia and even before she seized Austria. The manoeuvres are indicative of the interest we feel in European affairs, but they are not an "answer" to anything; the "answer" will be supplied by Congress shortly in the form of new naval and air bases in the Atlantic and Caribbean, or by the strengthening of old ones.

Other Nations Active

But we are not the only nation displaying keen interest in the "Western Ocean," and the French manoeuvres from Jan. 18 to the middle of March may well be one of the Gallic "answers" to the strengthening of German sea power. These manoeuvres will be held mainly in the Eastern Atlantic off Africa's West Coast, but at the start of the war game a French submarine division, a cruiser division and a division of battleships will be based on the French West Indian Islands.

Although no particulars have yet been announced, the British Home Fleet is expected later in the year to conduct Atlantic manoeuvres, although if the European situation should continue tense that fleet may well confine its activities to the North Sea. But it is clear that the sea powers of the world are again focusing their attention upon the "Western Ocean" across which the rich trade arteries of a score of nations carry the lifeblood of commerce, so essential to peace—or to war.

Army Quits War Game With Navy; Landing Exercise 'Not Worth Cost'

Friction Has Marked Annual Manoeuvres in Puerto Rico Area, With Objection to Full Control by Naval Arm Leading Factor

Participation of the army in the joint army-navy landing exercise scheduled for January, February and March at Puerto Rico and Culebra Island in the Caribbean were quietly canceled several months ago, it was learned yesterday.

The exercises have been held annually on a large and growing scale for the past four years, usually with army troops, marines, bluejackets and many different types of ships participating. Plans for the 1939 exercise were made more than a year ago, but friction arose between the army and navy at last year's exercise. The army felt that the exercise, as then conducted and as planned for this year, was of little training value to its officers and men.

Under the 1939 plans, the 16th and 18th Infantry Regiments, and perhaps a detachment of field artillery, all from posts in the Second Corps Area, were to have been transported to the Puerto Rican area.

It was planned to make the exercise larger than ever before, and this is still probable since the bulk of the United States fleet, normally stationed in the Pacific, will be in the Caribbean for its great strategical problem—"Fleet Problem XX"—during the exercise period and more ships will be available for participation. But the most important purpose of the exercise, the training of army and navy units in cooperative action, will not be accomplished and thus much of the meaning of the problem will be lost.

Army and navy officers in Washington and in New York said that the army's cancellation was based simply on the army's belief that the lessons to be learned would not be worth the cost of participation or the time required. The army felt, as a result of its experiences of last year, that a real joint staff was needed. It had asked that such a staff be established for this year's problem and that the army be permitted to plan and command one phase of one operation of the extensive problem. The navy, however, stood firmly upon policies which put the navy in charge of all landing force operations.

The cancellation was viewed by some officers as further and more serious evidence of friction and inadequate cooperation between the two services. Coming as it does on the heels of differences of opinion and some friction between the Army Air Corps and the Naval Air Service, it is expected to provoke some Congressional attention to the question of liaison and cooperation between the army and navy.

In the coming exercise 2,000 officers and men of the First Brigade

Continued on Page Fourteen

THIS PAGE IS UNCALSSIFIED

ARMY DROPS PART IN NAVY WAR GAME

Continued From Page One

of the Fleet Marine Force from Quantico, Va., will take part.

In the exercise of last year the Puerto Rican National Guard received some much-needed training in cooperation with the regular army detachment of 500 men from the First Division, operating with marines and bluejackets. The exercise will again stress landing operations on a supposedly hostile coast—probably the most difficult of military operations and one in which neither the army nor navy has had much training. It is an operation in which perfect coordination between army and navy is essential to success.

That coordination was not conspicuously successful last year. There was much friction and there were many mistakes. The navy ascribed this to the army's inflexibility. The army ascribed it to the navy's insistence upon absolute control of nearly all details of the exercise, navy lack of staff work and navy lack of understanding of the army's problems.

Artificialities also tended to diminish the effectiveness of the exercise. Because rather high seas were running some men were landed at a dock instead of being run through the surf and disembarked at the beachhead they were to have established. On some occasions men flouted some of the "rules" of the "war" and instead of wearing the uniforms prescribed, wore the khaki stipulated for their opponents, thus disguising their identity in a manner which was not in accord with the intended spirit of the exercise and which would have been impossible in real war.

Despite these artificialities and a lack of coordinated staff work which complicated the situation, considerable training was received and some lessons learned, particularly about the capabilities and uses of the especially built landing boats which were employed, some of them for the first time. The army, however, felt that the lessons it learned were too meager and minor to warrant the expense and time involved unless the conduct of the exercise was modified materially.

Essential Factors in National Defense Program

Comment by Readers on Various Phases of The Times Editorial Analysis of One of The Most Pressing of This Country's Present Problems

TO THE EDITOR OF THE NEW YORK TIMES:

Your editorials on "The Nicaragua Canal" and on the "Needs of the Army" illustrate your interest in the problem of our national defense.

My idea is that we ought to maintain naval, military and air forces adequate to defend our borders and coasts and to control the parts of the oceans in the vicinity of our own coasts. Also, to defend the Panama Canal, Hawaii, the Aleutian Islands in Alaska and our principal trade routes in the Western Hemisphere, as well as to support the Monroe Doctrine in case of necessity. The increased single fleet authorized at the last session of Congress should be sufficient for our defense when the new warships are completed.

The advanced base at Hawaii is strongly fortified on shore—forts with heavy guns and the army air forces and troops. Japan is too far off to attack our West Coast, especially without a base in the East Pacific. Nor can Japan attack Honolulu—5,000 miles from Japan.

We do not require another mass army of four million soldiers. Some of our best military students believe we do not need to build all at once any such gre[illegible] air force as 10,000 planes. The pres[illegible] authority is for a total of 5,320 [illegible] for both services. Such students [illegible] that we should make sure that we [illegible] the manufacturing capacity to prod[illegible] airplanes in large numbers so as t[illegible] quickly replace losses in airplanes in the event of war. This would be better than massing now a large number of airplanes of different ages.

Philippines Defense

Naval and military opinion seems united to the effect that we cannot defend the Philippines—6,000 miles distant and with Japan lying squarely between America and the Philippines. Should we join with Britain and France in any effort to place upon Japan alone economic and trade restrictions, such action would probably involve us in war under most disadvantageous conditions. We would be subject to reprisals: Japan could easily ruin the cities of Manila and Hong Kong by bombing them.

Public opinion in the United States seems to feel that it is inevitable that European questions will be settled by the people who live in Europe, and that the controversies in Eastern Asia will inevitably be settled by the people who live in Eastern Asia. Few if any persons feel that we can be isolated from the other nations of the world

power would form a great pool of reserve energy to be made available in time of emergency to adjacent factories or to be pumped into the networks of the private companies for more distant use. Meantime the value of investment of millions of citizens in the private utilities would enhance, due to the withdrawal of competition with their own government, purchasing power would be increased and private capital would flow into new investments which would and could be undertaken by the private power companies.

It is true that returns on the huge investment made by the government in these hydroelectric plants would be destroyed. This is just and proper, as national defense is for the benefit of all the people and its cost should be borne by all. It would put these power plants in the same category as a fortress or a battleship. Nobody expects a battleship to haul freight between wars to help pay its cost. It might be on the other side of the world when it was needed for battle.

ALBERT MILMOW.

Charlotte, N. C., Dec. 18, 1938.

Defensive Value Of Submarines

TO THE EDITOR OF THE NEW YORK TIMES:

While submarines are important, I feel that, with the new defense measures developed against them since the war, we should be careful not to depend too much on them for our defense against an invading enemy. It is a fact that the Germans during the war had them, but were unable to win the war with them, although they did cause the Allies great loss and worry by their efficient work.

Our national defense must be worked out on the principle we are now working on, that we must have a navy great enough, and an air force great enough, to maintain the command of sea and air against any enemy or combination of enemies possible. This presupposes also that we must have enough to protect not only our own shores but also to protect this hemisphere from landing forces of enemy powers. To do this we must have a striking force on sea and in air large enough so that it would be suicide for any enemy to think of trying to come across the ocean and attack any of the American nations.

If we do not work on this principle we may find some day that an enemy has landed not on our shores but in some South or Central American point, and from that point we may be forced to meet a land invasion instead of fight-

tities of raw materials and the finished products of the industrial plants which are being organized, and of the military forces and equipment, without causing a serious disarrangement of our civil transportation requirements, or the possible collapse of the whole system. No other major country is as unprepared as we are in this respect.

The greatest need today is the creation of a Department of Transportation, composed of men experienced in civil and military transportation problems, and whose duty it would be, first to evolve a national policy of transportation looking to the proper coordination and correlation of all forms of transportation for both civil operations in time of peace and civil and military operations in time of war. That cannot be accomplished in a few days, or even a few months. It requires continued effort and perfection exactly the same as any other branch of the service. It must continually follow advances made in the fields of railroad, waterway, highway and air transportation, and be prepared to use some or all of them in a coordinated effort to assure success. It is, in fact, the key to success.

There has never been a greater need for the establishment of a national transportation policy than exists today. Our railroad situation is such that if no sound policy is evolved the government will soon have to take over the railroads. The carriers themselves, or those affected, cannot solve it, because of the divergent interests involved.

It must be evident that, under these circumstances, the responsibility for finding a satisfactory solution of this most perplexing problem rests upon the Administration and upon Congress. A Department of Transportation, or a Transportation Authority, should be created without delay, and charged with the responsibility of finding a solution of both our civil and our military requirements.

L. ALFRED JENNY.

New York, Dec. 19, 1938.

Transcontinental Waterways

TO THE EDITOR OF THE NEW YORK TIMES:

Your editorial on the Nicaragua Canal seems to me somewhat inexact.

Of course the improvement of the defenses of Panama is a necessity. But the security of the short line of communications between our two oceans is the keystone of our naval policy; unless this security is absolute, we cannot depend on a single fleet, but must have a

THIS PAGE IS UNCALSSIFIED

However, our geographical situation enables us to keep out of the battle lines of foreign fighting countries.

Our most effective and economical forces would be a single department of defense—co-equal navy, air and army forces under a Cabinet Secretary of Defense. This official would coordinate and control the training and the operations of the armed forces and inspect their progress and efficiency. The air contingent going to war under navy command would, of course, in peace train under navy command and remain under that command. The same procedure would obtain as to the air force under army command. The chief of the air corps would control the reserve air force.

Nineteen countries have some form of the above organization for their forces. Here in the United States there is much opinion that we ought to leave any changes to be made during the confusion of preparations for war, that all branches would then be coordinated under the war powers of the Chief Executive. Any reorganization should, of course, be made during a period of peace.

WILLIAM C. RIVERS,
Major General, U. S. A. (retired).
New York, Dec. 19, 1938.

Electric Power Held Important

TO THE EDITOR OF THE NEW YORK TIMES:

Preparations planned for national defense will call for the expenditure of billions of dollars. One of the most important factors of such preparation is electric power. Nearly all industry is dependent on it for operation. It is flexible, and motors can be readily built and applied on short notice. Not so with the generating or power plant equipment, which takes a long time to build and install.

The hydroelectric plants built and building by the Federal Government are supposed to function with a threefold purpose, namely, flood control, navigation and power production. If the electric energy is sold now it cannot be reclaimed in case of war. This is true because the industries which it operates will immediately become "essential industries." All industry will be essential in the next war. Nor can it be withdrawn from the lighting of towns and cities.

It is suggested, then, that this Federal energy be not sold but held in reserve for war emergencies and the functions of navigation aid and flood control be retained for use in normal times. These functions can be performed much more fully if power is not sold. Reservoirs could be kept empty in wet seasons for catching flood waters and full for dry seasons when navigation must be artificially aided.

The furnishing of power for normal needs would then be left to the private power companies and the Federal

ing it away from our shores, where our civilian population, at least, will be spared some of the horrors of present-day warfare. We should be ready when the time comes to fight a winning war, not a defensive war, and the way to do that is and always has been to have the best navy, and now the best air force, and not to try to win by hiding under the waves, for wars cannot be won that way.

W. F. NUFER.
Goldsboro, N. C., Dec. 19, 1938.

Editorial Analysis Is Approved

TO THE EDITOR OF THE NEW YORK TIMES:

Congratulations on the editorials which you have been running on the subject of national defense.

As one who knows something about aviation, I was particularly impressed by your analysis of the air defense. There seems to be a great deal of unjustified hysteria regarding the present situation, and it is gratifying to see you take a rational stand at this time, when straight thinking is so necessary.

C. S. (CASEY) JONES.
Newark, N. J., Dec. 19, 1938.

Coordinating Transportation

TO THE EDITOR OF THE NEW YORK TIMES:

I have read with interest your series of editorials entitled "A National Defense Program." You have clearly outlined our industrial preparedness program and you have stated some of the shortcomings, but you have not included among them the need for preparation in the field of military transportation. Very few people realize that we have no organization which, in time of an emergency, could promptly step in and direct our transportation.

Neither the Quartermaster Corps nor the Corps of Engineers is qualified to undertake the effective planning for, or the operation of, our railroads. They would have to depend upon men from civil life to do so under their direction. But how can they be expected to perform intelligent direction of so vast and intricate an operation as would be involved without having a basic knowledge of the requirements? Due to this lack of knowledge no effective preparations are made.

We cannot expect to have a year again in which to muddle along and prepare as we did during the World War. We must be ready for instant action. We must have plans of organization along sound lines with a nucleus constantly at work in planning and perfecting the transportation program and organization, to be enlarged in time of emergency by a well organized reserve, so that immediately upon mobilization it could spring into an effective organization over night and function smoothly. We must be able to superimpose upon our civilian traffic, upon a given day, the transportation of vast quan-

fleet in each ocean fully adequate to deal with any potential enemy.

The estimate of two days to pass through the Nicaragua Canal seems excessive. This will be a sea-level canal save for a possible single set of locks west of Lake Nicaragua. It should be possible to steam at fifteen knots for the seventy miles of transit across the lake and at ten knots in the San Juan River (eighty miles approximately). The transit ought to be possible in fifteen or sixteen hours altogether.

The gain by possessing two canals is not only one of increasing the speed of transferring the fleet from one ocean to the other by the use of both canals, but of having two means of transit instead of one. The theory that "bombers who attacked one (canal) successfully might easily attack the other on the same raid" hardly takes into account the difficulties to be encountered in such an attempt.

Bases for Bombers

These bombers must have a base—presumably on carriers, since a land base in the vicinity would be no easy matter to establish. Wherever their base, they must return to it after attacking one canal, to get a fresh load of bombs for the next—unless we are to assume that they will make only half an attack on one canal and save part of their bombs for the other: not exactly a method of warfare which promises much success at either place. In war one does not make half an attack; not if one hopes for success.

Since careful examination of the problem of air attack on such a position as Panama makes it thoroughly apparent that surprise is an essential ingredient of victory in such a case, what becomes of surprise in the second attempt? The attacker could hardly expect to surprise both defense forces.

The theory you express that "two fleets could shell the entrances of both canals simultaneously" does not go very deeply into the strategical problem involved, which has been well illustrated by Mahan in considering the advantages of two ports on a single maritime frontier—which the two canals would give us—and shows how an enemy fleet is thus compelled either (a) to divide its forces, exposing the fractions to being attacked in detail; or (b) to concentrate on one point, leaving the opposing fleet freedom of action from the other.

"Turn the military argument whichever way we please," therefore, it seems to the writer that the building of the Nicaragua Canal as quickly as possible is a form of military reinsurance which the United States cannot neglect to provide. We must either build two fleets or we must take every possible means of insuring the swift transit between our two oceans of the single fleet upon which all our security rests.

GEORGE FIELDING ELIOT.

A NATIONAL DEFENSE PROGRAM

3—The American Army

There is nothing in the present situation that calls for a change in our basic military policy. We do not need a large standing army. Nor do we need conscription. What we need is a moderate increase in the strength of our present army and the complete equipment of that army with the weapons of modern warfare.

The increase in strength is necessary partly for reasons of geography. We have today a Regular Army of 165,000 enlisted men (a small army as armies go, putting us eighteenth in numerical strength among the nations of the world). But of these 165,000 enlisted men, more than 40,000 are in our overseas possessions and other thousands are scattered about the United States itself—either garrisoned in small army posts which survive as relics of the past or distributed in small handfuls among hundreds of towns and cities, for the desirable purpose of giving military instruction to National Guardsmen, Organized Reserves, ROTC and CMTC. In addition, there are new branches of the army—its air service, for example—which cannot be operated efficiently without more personnel.

These circumstances warrant an increase of our Regular Army from 165,000 to 185,000 enlisted men, and of our National Guard from 200,000 to 215,000, together with the necessary increase of officer personnel. Along **with this increase should go a tactical reorganization of the army, in order to give us an adequate protective mobilization force. It is high time to abandon political army posts which exist** primarily for the prestige of Congressmen and to concentrate the army in large enough units to enable it to function as an army, with ample training areas. The Second Division, shortly to be concentrated at San Antonio for special field tests, should be stationed permanently there. The First Division should be concentrated in one area on the East Coast, and the Third at a similar concentration point on the West Coast. Meanwhile, the 100,000 officers of the Organized Reserve should be given at least fourteen days of active duty training every other year, and provision should also be made for the attendance of at least 300 Reserve officers annually at the general

THIS PAGE IS UNCALSSIFIED

and special service schools.

The problem of equipment is, if anything, even more important than the problem of personnel. There is not a single modern anti-tank gun in the army. Considerably more anti-aircraft equipment is needed. (We do some of these things badly; the 37-mm. anti-aircraft gun recently adopted is essentially the same gun as a model first tested in 1926.) We need more tanks, and the manufacture of these weapons, now almost exclusively a Government monopoly at the Rock Island Arsenal, should be taught to commercial concerns by means of "educational orders," so that a basis will be laid for their production in quantity in case of an emergency. Modern "medium" tanks, only eighteen of which are now on order, should be substantially increased in number, and experiment with heavier types should be undertaken.

All these new weapons, however, are of limited application. In the provision of materiel the needs of the old reliable infantry and artillery ought to have priority. The supply of new semi-automatic rifles, designed to replace the old Springfields, should be speeded up. The infantry needs light machine guns, trench mortars and gas masks (there are only eight gas masks per hundred men in the National Guard today). The artillery requires, above all else, a very considerable reserve of ammunition. Lack of such a reserve is one of our greatest weaknesses. Faster production of the 105-mm. howitzer and of the new 8-inch howitzer should be developed. Both the Regular Army and the National Guard need many more motor cars and trucks. All this, it should be noted, is solely for the purpose of equipping our protective mobilization force of Regular Army and National Guard in accordance with plans already drawn.

Of scarcely less importance is the necessity of completing the modernization of our coastal fortifications along the Pacific seaboard; of taking in hand the projected program for strengthening Atlantic and Gulf Coast defenses; of adding certain anti-aircraft equipment to our already strong outposts in Hawaii and at Panama, and of establishing fortifications for a projected naval and air base in Puerto Rico.

SEA SCOUTING FEAT OF PLANE REVEALED

Patrol Craft Dogged 'Enemy' Fleet 30 Hours Far at Sea Undetected

ON JOB TILL GAS RAN OUT

Marines in Landing Exercises in Caribbean This Week as Part of Navy Manoeuvres

By HARWOOD HULL

Special Cable to THE NEW YORK TIMES.

SAN JUAN, P. R., March 5.—Mimic warfare may have its heroes no less than actual combat. At least approaching the heroic was the performance of a navy patrol plane and crew, belonging to Wing 1, but otherwise shrouded in anonymity, about which there is more talk than of any other single incident which has come to light since the completion of the Navy's Problem XX last week.

The opposing forces of Admiral E. C. Kalbfus and Vice Admiral Adolphus Andrews were assembled under Admiral C. C. Bloch, the fleet commander, off Culebra Island long enough at the end of the war game for the story to get around. The more than 130 ships are now temporarily scattered.

The big patrol plane had orders to locate the White attacking fleet under Admiral Kalbfus and spy out its course as it approached the long string of islands which mark the eastern boundary of the Caribbean, of which one island was supposed to be seized for an enemy base if the attack succeeded.

The plane left its base near here and disappeared in the eastern sky. It located the enemy far out at sea from a height of three miles, so the story goes. It followed the wake of Admiral Kalbfus's ships hour on hour.

Darkness followed day and daylight came again. The patrol plane remained aloft, reporting back to its base the White fleet's movement.

Unmolested and Unrelieved

The plane was not forgotten, but for some reason not explained it was neither relieved nor did it get an order recalling it. It was not molested by the enemy nor detected by the umpires.

After more than thirty hours up there, the big plane came back and landed at its base with only fumes left in its fuel tanks.

The craft had been in the air for a longer time than was required in the non-stop flight from San Diego to the Panama Canal and probably had flown a greater distance than the more than 3,000 miles of that flight.

Much to his surprise, the plane commander on his return was asked where he had been.

His explanation was brief and simple. He quoted his orders. He had been sent on a mission and he had stuck to it at 15,000 feet in the air.

When no relief came he had just

at Vieques. The ships of the Atlantic squadron under Rear Admiral Alfred W. Johnson and the First Brigade of the fleet marine force participating.

Whole War Game Photographed

Much information, particularly photographic, which was gained during the development of Problem XX will be available for the smaller-scale activities now scheduled. New aerial maps have been prepared for all the areas to be utilized in the coming exercises.

In fact, photography has played a far greater part in this Winter's manoeuvres than in any previous large-scale navy operation. Practically every action recordable by the photographic lens, whether from the air or from surface ships, has been supplied in pictures to Admiral Bloch.

One technique carried to a new point in the war game has been simultaneous photography from two or more planes with cameras operating under radio control.

These pictures will supplement the maps in telling the story of the White and Black fleets at the critique. Both maps and pictures will be seen for the first time by the navy flag and staff officers when they assemble at Guantanamo.

Six weeks after the critique, the fleet will be at New York for the World's Fair.

for some reason not explained it was neither relieved nor did it get an order recalling it. It was not molested by the enemy nor detected by the umpires.

After more than thirty hours up there, the big plane came back and landed at its base with only fumes left in its fuel tanks.

The craft had been in the air for a longer time than was required in the non-stop flight from San Diego to the Panama Canal and probably had flown a greater distance than the more than 3,000 miles of that flight.

Much to his surprise, the plane commander on his return was asked where he had been.

His explanation was brief and simple. He quoted his orders. He had been sent on a mission and he had stuck to it at 15,000 feet in the air.

When no relief came he had just continued dogging the enemy fleet and watching its foaming wake until only enough gas remained to fly back to his base.

There may be no official record involved in the performance, but quite possibly when all the facts are checked this plane's tour of duty may be found to mark a new high for sustained operation in simulated warfare.

At any rate the incident is being cited as demonstrating the value of the air service in hemisphere defense, as well as the possibilities for greater range at sea of planes operating from an advance base in the Eastern Caribbean, the importance of which President Roosevelt stressed on his return from the manoeuvres.

To Meet at Guantanamo

Today the ships of the combined fleet were in scores of ports on the Caribbean and the Gulf of Mexico or en route to ports. Many cruisers went to their name ports, some for the first liberty for their crews since they left the West Coast late in December.

But the Winter's work is not finished. Most of the war vessels are due at the base at Guantanamo, Cuba, on March 15, when a critique of Fleet Problem XX is scheduled to take place aboard Admiral Bloch's flagship, the Pennsylvania.

As chief umpire as well as commander of the fleet, Admiral Bloch is continuing the secrecy surrounding Problem XX. From his temporary base off Culebra, where the greatest number of American warships ever assembled, remained for some time the past week, Admiral Bloch sent word ashore that it was still the navys' policy not to discuss for publication any phase of the problem.

The rendezvous at Culebra coming immediately after the war game, revived speculation on the prospect of future greater use for fleet operations of Vieques Sound.

For several days this area had a thorough test as a fleet anchorage. Vieques Sound extends twenty to thirty miles east and west between Puerto Rico and the Virgin Islands channel and more than ten miles between Culebra and a string of small islands on the north and Vieques Island on the south.

All the islands afford many sheltered anchorages for all types of ships, generally of easy access and with optional exits. Land batteries mounted on heights on the islands might provide adequate protection against possible enemy approach. The area has been the subject of several navy surveys since soon after the purchase of the Virgin Islands from Denmark more than twenty years ago.

With Problem XX ended, new light is shed on the reasons the army did not participate beyond having observers with the navy's key units.

Essentially it was a problem in manoeuvring opposing forces far at sea, supported by airplanes operating either from shore or from sheltered bases. The use of troops ashore or getting them ashore was outside the scope of the problem. When the quitting whistle blew the White and Black fleets were scattered over more than 1,000 square miles of water.

Actual landing exercises, such as those in which units of the army's First Division participated last year, will be under way this week

or more planes with cameras operating under radio control.

These pictures will supplement the maps in telling the story of the White and Black fleets at the critique. Both maps and pictures will be seen for the first time by the navy flag and staff officers when they assemble at Guantanamo.

Six weeks after the critique, the fleet will be at New York for the World's Fair.

5,500 WAR PLANES POSSIBLE IN YEAR

Survey Shows Present Plant Facilities in This Country Can Deliver the Craft

WOULD DOUBLE EMPLOYES

L.W.Rogers,Head of Industry's Chamber, Says Program Calls for 74,000 in Three Shifts

TThe aircraft manufacturing industry of the United States can double its current production with the present plant space, Leighton W. Rogers, president of the Aeronautical Chamber of Commerce, said yesterday in making public the results of a survey just completed.

Mr. Rogers's report, which followed President Roosevelt's national defense message by several hours, stated that the industry could deliver 5,500 military planes a year with existing plant area.

"Our survey shows that the industry can increase its military output more than twofold by hiring more labor and installing machinery to prevent possible bottlenecks in production lines," Mr. Rogers stated.

"In 1938 the industry's production aggregated approximately 3,675 planes of all types. Of that production there were 150 transports, 300 private and business planes, 1,425 light planes and about 1,800 military craft, incluring those produced for export.

"[illegible]et, contrary to popular belief, the industry is nowhere near capacity production. Some of our important plants have practically no [illegible]ness."

[illegible]he survey showed, Mr. Rogers [illegible]orted, that the 1938 average of [illegible] military place a month had been [illegible]pped up toward the close of the [illegible]ar to an average of about 200 [illegible]aft.

Extra Machinery in Storage

Outlining conditions under which [illegible]e industry could meet the demands of a program calling for [illegible],500 planes annually, he assumed [illegible]hat such a program would be well coordinated, calling for heavy four-engine bombers, light twin-engine bombers, pursuit planes and both primary and advanced trainers of types and models which are now in service or have already passed satisfactory service tests.

"Some plants which have heretofore produced only commercial planes would be available to participate in such a military program," he continued.

"No important factory expansion would be necessary for either the [illegible] commercial manufac-

Roosevelt's Message on Defense

By The Associated Press.

WASHINGTON, Jan. 12 (AP)—The following is the text of President Roosevelt's message to Congress on national defense.

TO THE CONGRESS OF THE UNITED STATES:

In my annual message to this Congress I have spoken at some length of the changing world conditions outside of the American Hemisphere which make it imperative that we take immediate steps for the protection of our liberties.

It would be unwise for any of us to yield to any form of hysteria. Nevertheless, regardless of political affiliations, we can properly join in an appraisal of the world situation and agree on the immediate defense needs of the nation.

It is equally sensational and untrue to take the position that we must at once spend billions of additional money for building up our land, sea and air forces on the one hand, or to insist that no further additions are necessary on the other.

What needs to be emphasized is the great change which has come over conflicts between nations since the World War ended, and especially during the past five or six years.

Lessons of the World War

Those of us who took part in the conduct of the World War will remember that in the preparation of the American armies for actual participation in battle, the United States, entering the war on April 6, 1917, took no part whatsoever in any major engagement until the end of May, 1918.

In other words, while other armies were conducting the actual fighting, the United States had more than a year of absolute peace at home without any threat of attack on this continent, to train men, to produce raw materials, to process them into munitions and supplies and to force the whole into fighting forces. It is even a matter of record that as late as the Autumn of 1918 American armies at the front used almost exclusively French or British artillery and aircraft.

Calling attention to these facts does not remotely intimate that the Congress or the President have any thought of taking part in another war on European soil, but it does show that in 1917 we were not ready to conduct large-scale land or air operations. Relatively we are not much more ready to do so today than we were then—and we cannot guarantee a long period free from attack in which we could prepare.

I have called attention to the fact that "we must have armed forces and defenses strong enough to ward off sudden attack against strategic positions and key facilities essential to insure sustained resistance and ultimate victory." And I have said "we must have the organization and location of [illegible] key facilities so that they [illegible]

000, of which sum approximately $210,000,000 would be actually spent from the Treasury before the end of the fiscal year ending June 30, 1940.

The survey indicates that of this sum approximately $450,000,000 should be allocated for new needs of the army, $65,000,000 for new needs of the navy, and $10,000,000 for training of civilian air pilots.

The several items will be submitted to the appropriate committees of the Congress by the departments concerned, and I need, therefore, touch only on the major divisions of the total.

In the case of the army, information from other nations leads us to believe that there must be a complete revision of our estimates for aircraft. The Baker board report of a few years ago is completely out of date. No responsible officer advocates building our air forces up to the total either of planes on hand or of productive capacity equal to the forces of certain other nations. We are thinking in the terms of necessary defenses and the conclusion is inevitable that our existing forces are so utterly inadequate that they must be immediately strengthened.

Would Add 3,000 New Planes

It is proposed that $300,000,000 be appropriated for the purchase of several types of airplanes for the army. This should provide a minimum increase of 3,000 planes, but it is hoped that orders placed on such a large scale will materially reduce the unit cost and actually provide many more planes.

Military aviation is increasing today at an unprecedented and alarming rate. Increased range, increased speed, increased capacity of airplanes abroad have changed our requirements for defensive aviation. The additional planes recommended will considerably strengthen the air defenses of the Continental United States, Alaska, Hawaii, Puerto Rico and the Canal Zone. If an appropriation bill can be quickly enacted, I suggest that $50,000,000 of the $300,000,000 for airplanes be made immediately available in order to correct the present lag in aircraft production due to idle plants.

$110,000,000 for "Critical Items"

Of the balance of approximately $150,000,000 requested for the army, I suggest an appropriation of $110,000,000 to provide "critical items" of equipment which would be needed immediately in time of emergency, and which cannot be obtained from any source within the time and quantity desired—material such as anti-aircraft artillery, semi-automatic rifles, anti-tank guns, tanks, light and heavy artillery, ammunition and gas masks. Such purchases would go far to equip existing units of the regular army and the National Guard.

I suggest approximately $32,000,000 for "educational orders" for the army—in other words, to enable industry to prepare for [illegible] in an emer-

divided into (A) $44,000,000 for the creation or strengthening of navy bases in both oceans in general agreement with the report of the special board which has already been submitted to the Congress, (B) about $21,000,000 for additional navy airplanes and air material tests.

For Training of Air Pilots

Finally, national defense calls for the annual training of additional air pilots. This training should be primarily directed to the essential qualifications for civilian flying. In cooperation with educational institutions, it is believed that the expenditure of $10,000,000 a year will give primary training to approximately 20,000 citizens.

In the above recommendations for appropriations totaling $525,000,000, I have omitted reference to definite need, which, however, relates to the implementing of existing defenses for the Panama Canal. The security of the canal is of the utmost importance. The peace garrison now there is inadequate to defend this vital link. This deficiency cannot be corrected with existing forces without seriously jeopardizing the general defense by stripping the Continental United States of harbor defense and anti-aircraft personnel.

The permanent garrison in the Canal Zone should be increased to provide the minimum personnel required to man the anti-aircraft and seacoast armament provided for the defense of the canal. Such personnel cannot be increased until additional housing facilities are provided—and, in the meantime, additional personnel must be trained.

$27,000,000 for Canal Defense

I recommend, therefore, an appropriation of $27,000,000 to provide an adequate peace garrison for the Canal Zone and to house it adequately. Five million dollars of this sum should be made available immediately in order that work on necessary construction can be initiated.

All of the above constitutes a well-rounded program, considered by me as Commander-in-Chief of the army and navy, and by my advisors to be a minimum program for the necessities of defense. Every American is aware of the peaceful intentions of the government and of the people. Every American knows that we have no thought of aggression, no desire for further territory.

Nevertheless, as the executive head of the government, I am compelled to look facts in the face. We have a splendid asset in the quality of our manhood. But without modern weapons, and without adequate training, the men, however splendid the type, would be hopelessly handicapped if we were attacked.

The young men of this nation should not be compelled to take the field with antiquated weapons. It would be economically unsound to provide in time of peace for all the modern equipment needed in a war emergency. But it would be nationally un[illegible] not to provide the critical [illegible]

THIS PAGE IS DECLASSIFIED IAW EO 13526

[illegible] yesterday in making public the results of a survey just completed.

Mr. Rogers's report, which followed President Roosevelt's national defense message by several hours, stated that the industry could deliver 5,500 military planes a year with existing plant area.

"Our survey shows that the industry can increase its military output more than twofold by hiring more labor and installing machinery to prevent possible bottlenecks in production lines," Mr. Rogers stated.

"In 1938 the industry's production aggregated approximately 3,675 planes of all types. Of that production there were 150 transports, 300 private and business planes, 1,425 light planes and about 1,800 military craft, incluring those produced for export.

"Yet, contrary to popular belief, the industry is nowhere near capacity production. Some of our important plants have practically no business."

The survey showed, Mr. Rogers reported, that the 1938 average of 150 military place a month had been stepped up toward the close of the year to an average of about 200 craft.

Extra Machinery in Storage

Outlining conditions under which the industry could meet the demands of a program calling for 5,500 planes annually, he assumed that such a program would be well coordinated, calling for heavy four-engine bombers, light twin-engine bombers, pursuit planes and both primary and advanced trainers of types and models which are now in service or have already passed satisfactory service tests.

"Some plants which have heretofore produced only commercial planes would be available to participate in such a military program," he continued.

"No important factory expansion would be necessary for either the military or commercial manufacturers, although there might be minor additions in some cases.

"Additional machinery would be necessary to eliminate certain bottlenecks in the production line. In many instances, however, such machinery is already in storage plants and could be put in operation immediately. In some few cases, the plants would have to buy new machinery."

About 36,000 persons were now employed in the industry, the survey showed, and a program calling for 5,500 military craft would raise the total of wage-earners in the airplane manufacturing business to about 74,000 persons working in three shifts daily.

Progression of the Output

Experience had shown, it continued, that about six months were required for training labor and eight or nine months for tooling up and jig installation.

"This does not mean that six months would be required to start production," Mr. Rogers explained. "Deliveries of most models could start immediately because they are already in production on present orders.

"As the plants completed their tooling operations, deliveries would increase progressively until at the end of eight or nine months full production would be reached."

An important item in such a program, he said, is experienced management, executive and supervisory personnel.

"There can be no substitute for experience in the manufacture of aircraft," he added. "In all cases where outside industries or other groups have been charged with aircraft-production programs the result has been delay and waste of funds."

"If the factors I have outlined are considered in drawing up a program," Mr. Rogers concluded, "the industry as it is now constituted can provide the defense service with the 5,500 planes as shown by our survey.

"It can also take care of all replacements, with emphasis on constant improvement through research and development, and at the same time be prepared for the vastly expanded production which would be necessary in the event of war."

The survey was made over a period of two months.

---

or to insist that no further additions are necessary on the other.

What needs to be emphasized is the great change which has come over conflicts between nations since the World War ended, and especially during the past five or six years.

Lessons of the World War

Those of us who took part in the conduct of the World War will remember that in the preparation of the American armies for actual participation in battle, the United States, entering the war on April 6, 1917, took no part whatsoever in any major engagement until the end of May, 1918.

In other words, while other armies were conducting the actual fighting, the United States had more than a year of absolute peace at home without any threat of attack on this continent, to train men, to produce raw materials, to process them into munitions and supplies and to force the whole into fighting forces. It is even a matter of record that as late as the Autumn of 1918 American armies at the front used almost exclusively French or British artillery and aircraft.

Calling attention to these facts does not remotely intimate that the Congress or the President have any thought of taking part in another war on European soil, but it does show that in 1917 we were not ready to conduct large-scale land or air operations. Relatively we are not much more ready to do so today than we were then—and we cannot guarantee a long period free from attack in which we could prepare.

I have called attention to the fact that "we must have armed forces and defenses strong enough to ward off sudden attack against strategic positions and key facilities essential to insure sustained resistance and ultimate victory." And I have said "we must have the organization and location of those key facilities so that they may be immediately utilized and rapidly expanded to meet all needs without danger of serious interruption by enemy attack."

New Tempo in Warfare

I repeat that "there is new range and speed to offense." Therefore, it has become necessary for every American to restudy present defense against the possibilities of present offense against us.

Careful examination of the most imperative present needs leads me to recommend the appropriation at this session of the Congress, with as great speed as possible, of approximately $525,000,-

tions. We are thinking in the terms of necessary defenses and the conclusion is inevitable that our existing forces are so utterly inadequate that they must be immediately strengthened.

Would Add 3,000 New Planes

It is proposed that $300,000,000 be appropriated for the purchase of several types of airplanes for the army. This should provide a minimum increase of 3,000 planes, but it is hoped that orders placed on such a large scale will materially reduce the unit cost and actually provide many more planes.

Military aviation is increasing today at an unprecedented and alarming rate. Increased range, increased speed, increased capacity of airplanes abroad have changed our requirements for defensive aviation. The additional planes recommended will considerably strengthen the air defenses of the Continental United States, Alaska, Hawaii, Puerto Rico and the Canal Zone. If an appropriation bill can be quickly enacted, I suggest that $50,000,000 of the $300,000,000 for airplanes be made immediately available in order to correct the present lag in aircraft production due to idle plants.

$110,000,000 for "Critical Items"

Of the balance of approximately $150,000,000 requested for the army, I suggest an appropriation of $110,000,000 to provide "critical items" of equipment which would be needed immediately in time of emergency, and which cannot be obtained from any source within the time and quantity desired—material such as anti-aircraft artillery, semi-automatic rifles, anti-tank guns, tanks, light and heavy artillery, ammunition and gas masks. Such purchases would go far to equip existing units of the regular army and the National Guard.

I suggest approximately $32,000,000 for "educational orders" for the army—in other words, to enable industry to prepare for quantity production, in an emergency, of those military items which are non-commercial in character and are so difficult of manufacture as to constitute what is known as "bottlenecks" in the problem of procurement.

The balance should be used, I believe, for improving and strengthening the seacoast defenses of Panama, Hawaii and the Continental United States, including the construction of a highway outside the limits of the Panama Canal Zone, important to the defense of the zone.

The estimated appropriation of $65,000,000 for the navy should be

tance. The peace garrison now there is inadequate to defend this vital link. This deficiency cannot be corrected with existing forces without seriously jeopardizing the general defense by stripping the Continental United States of harbor defense and anti-aircraft personnel.

The permanent garrison in the Canal Zone should be increased to provide the minimum personnel required to man the anti-aircraft and seacoast armament provided for the defense of the canal. Such personnel cannot be increased until additional housing facilities are provided—and, in the meantime, additional personnel must be trained.

$27,000,000 for Canal Defense

I recommend, therefore, an appropriation of $27,000,000 to provide an adequate peace garrison for the Canal Zone and to house it adequately. Five million dollars of this sum should be made available immediately in order that work on necessary construction can be initiated.

All of the above constitutes a well-rounded program, considered by me as Commander-in-Chief of the army and navy, and by my advisors to be a minimum program for the necessities of defense. Every American is aware of the peaceful intentions of the government and of the people. Every American knows that we have no thought of aggression, no desire for further territory.

Nevertheless, as the executive head of the government, I am compelled to look facts in the face. We have a splendid asset in the quality of our manhood. But without modern weapons, and without adequate training, the men, however splendid the type, would be hopelessly handicapped if we were attacked.

The young men of this nation should not be compelled to take the field with antiquated weapons. It would be economically unsound to provide in time of peace for all the modern equipment needed in a war emergency. But it would be nationally unsound not to provide the critical items of equipment which might be needed for immediate use, and not to provide for facilities for mass production in the event of war.

Devoid of all hysteria, this program is but the minimum of requirements.

I trust, therefore, that the Congress will quickly act on this emergency program for the strengthening of the defense of the United States.

FRANKLIN D. ROOSEVELT.
The White House,
Jan. 12, 1939.

Special to THE NEW YORK TIMES.

CHICAGO, Jan. 12.—Immediate development of adequate and effective air forces by both army and navy and expansion of the productive capacity of the aircraft industry were urged today by the National Advisory Committee for Aeronautics in its report for 1938 published simultaneously here and in Washington.

Without naming any nation, the committee pointed toward the tremendous development of air power in Europe and declared that advances in modern aircraft had been such that an entirely new concept of national defense had been thrust upon the United States and other great nations.

The committee operates the nationally subsidized scientific laboratory at Langley Field, Va., where the army and navy conduct most of their aeronautical research. One of its members is Colonel Charles A. Lindbergh, whose report on European air power is said to have been considered in drafting the committee's annual report.

"The sudden and rather general appreciation of the potentialities of modern air power is the most signigicant event that has occurred in modern times in connection with strengthening the desires of peoples to avoid war," the committee stated.

"The imminent prospect of noncombatants being subjct to indiscriminate attack by aircraft has stirred the imagination of all."

Strides in Air Speed Cited

Apparently referring to the German air force, the committee said:

"The history of 1938 bears witness how a nation in the space of a few years by concentrating much of its scientific research and industrial resources on the development of air power, could gain, for the time being, a dominating position."

While a few years ago speeds of 200 miles an hour were satisfactory, the military forces were now striving toward 300 to 400 miles an hour, the report stated.

"It is not only good policy from a financial consideration, but also vital from the standpoint of national defense that Amreican aircraft have a performance equal or superior to that of a potential enemy," it continued.

This principle necessitates serious consideration of American aeronautical research and experimental facilities.

"The committee, therefore, in the interests of peace and security, recommends the development by the army and navy of adequate and efficient air arms and the early adoption of a program for expanding the productive capacity of the aircraft industry and methods for training the necessary active and reserve personnel."

THIS PAGE IS UNCALSSIFIED

A NATIONAL DEFENSE PROGRAM

5—The Organization of Supply

To a large degree the problem of an adequate national defense is an industrial problem rather than a military problem. This is so obvious to those countries which are now engaged in building aggressive war machines that they have organized their whole economy around the service of supply. Questions of normal industrial expansion, of higher wages for labor, of a better product and therefore a better standard of living for the consumer and of a satisfactory return for capital on its investment are now regarded as academic. Every regulation issued by an all-powerful government, every subsidy granted to the managers of industry, every control imposed on foreign trade and the transfer of currency, is now weighed solely from the point of view of its contribution toward the maintenance of an aggressive army in the field. These countries have ceased to function under a free economy. They have ceased in effect to be nations and have become essentially armed camps.

We cannot hope, nor should we wish, to follow the example of these nations. The price required for the effort is entirely too high a price to pay, and fortunately it is not necessary in our case. Our industrial capacity is already far in excess of that of the war-making nations. Nor are we seeking, as they are, to create a "mass" army. We are seeking to create an adequate navy and to equip a comparatively small protective mobilization force of Regular Army and National Guard with modern weapons. Nevertheless, in any survey of our present needs we are bound to consider the relationship between industry and government in the matter of national defense and to plan in advance, as thoroughly as we can, for the provision of an adequate service of supply in time of need. Here there are three things, specifically, that can be done. We can survey, and allocate to future needs, the present capacity of American industry to furnish war material. We can encourage certain industries to experiment with the production of highly specialized equipment which would be needed by the army or the navy. And we can accumulate reserve supplies of essential raw materials which the United States itself

terials which the United States itself does not produce.

So far as the first of these three projects is concerned, a start has been made (although much work remains to be done) toward the standardization of military equipment, now of such diverse make and design as to create manufacturing difficulties. Some 10,000 factories have been investigated, analyzed and earmarked for the production of some 7,300 military items in time of war. Most of these factories normally produce closely similar items in times of peace, so that no extensive retooling would be necessary in order to supply military needs and no great delay for plant expansion or reorganization would be involved.

But, as Assistant Secretary of War Johnson has pointed out, there is a bottleneck in "approximately fifty-five items so difficult of production, so different from ordinary peacetime needs, that industry will not be able to go into mass production of them without some education." Two million dollars was provided by the last Congress for the purpose of giving "educational orders" to industry in the manufacture of six of these fifty-five items. But there remain forty-nine other items equally essential —bomb sights for planes, canisters for gas masks, demolition bombs and fuses, 37-mm. guns, and so on—that cannot now be manufactured except in small quantities in Government arsenals. Here the device of the "educational order" should be employed on a much larger scale, for the benefit of both the army and the navy. The guaranty that there will be factories trained in the habit of producing even the most difficult war items, with a nucleus of expert employes for that purpose, is one of the most important requirements of national defense today.

As for reserve supplies of essential raw materials: it is an ironic fact that the United States Government is now importing (and burying in the ground) vast quantities of one raw material—silver—for which we have no use whatever, either in times of peace or war. It would be the part of wisdom to call a halt on this folly, and to use our funds to lay up stocks of those raw materials which would actually be of use in time of need—such materials as manganese and antimony, tin and tungsten, iodine and wool and rubber.

2—America on the Seas

The most challenging naval question before the United States today is the proposal for a "two-ocean" navy. That proposal has been disavowed by President Roosevelt, but it is certain to meet with powerful support at the next session of Congress.

A "two-ocean" navy means a navy strong enough to cope simultaneously with the strongest fleets that can possibly be sent against us both in the Atlantic and in the Pacific. Our main fleet today is in the Pacific. The proponents of the "two-ocean" plan want a fleet of approximately equal strength in the Atlantic. They base their case for it upon two points: first, the indisputable fact that the defense of the two Americas has again made the Atlantic and the Caribbean of great strategic consequences to us; second, the more questionable assumption that the Panama Canal, connecting link for our present single fleet between the two oceans, is vulnerable to attack.

The assumption is scarcely strong enough to warrant the expenditure of the gigantic sum—at least three billion dollars for initial construction alone—that would be required for the creation of a second fleet for the Atlantic. The defenses of the Panama Canal doubtless need some strengthening—another set of wider and longer locks, and the flanking support of an adequate naval and air base in the Guantanamo Bay-San Juan-Culebra-St. Thomas area; but, even as it stands, the Canal is by no means vulnerable. Nor should the fact be overlooked that our naval strength, while confined principally to the Pacific, compares favorably with the naval strength of any nation in the world. The assumption that any likely alliance of hostile nations could afford simultaneously to strip their own

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

coasts of all means of self-defense, in order to attack us at a great distance in two oceans, is so unlikely as to amount almost to the fantastic.

In these circumstances what we need on the seas is not a whole new fleet for the Atlantic, a fleet which could be built only at an inordinate cost, but rather a continuation of the program of expansion already authorized, and meantime a fresh approach to the problem of creating a better-balanced and more-rounded single fleet than we possess today.

Here our chief needs lie in details which may readily escape the attention of a Congress tempted to think of the problem of national defense in more dramatic terms. We have no present need of battleships, beyond those now building and authorized. But we do need more destroyers and more submarines, because most of those we have today are over-age. We need torpedoes for such ships (the reopening for production of the Alexandria, Va., plant only partially solves this problem). We need more aircraft carriers, more auxiliaries, a moderate strengthening of the marine corps and a more adequate merchant marine and shipbuilding industry to supplement our naval strength in time of war.

But the greatest need of our navy, paradoxically enough, lies on shore and not at sea. Here the organization of our national defense has shown itself to be wholly inadequate to the task before it. During the last five years few ships except submarines have been finished on time; today most of them are months behind schedule. The Navy Department itself admits the discovery of defects in new ships—defects which have increased costs and decreased efficiency. There is, within the Department and in the shore organizations, a somewhat antiquated machinery which is plainly in need of overhauling.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

A NATIONAL DEFENSE PROGRAM

6—The Problem of Organization

In the last analysis the key to the problem of industrial planning for national defense lies in the organization, the administration and the methods employed by the War and Navy Departments. Manufacturers may do their part; business may support governmental programs wholeheartedly; but unless the wheels of the two departments turn smoothly and mesh perfectly any national defense program will be materially, perhaps fatally, handicapped.

Unfortunately, these wheels are not turning as smoothly or meshing as perfectly as they should. There is close cooperation, to be sure, between the titular heads of War and Navy Departments and their high-ranking assistants. But further down the line there is evidence of friction between the two departments, demonstrated by the antagonism which has long existed between some members of the military and naval air forces.

Moreover, friction of this kind is not only inter-departmental, but intra-departmental. The War Department at this moment is handicapped by political rivalry between its two highest civilian officials. In the Navy Department responsibility for the tremendous program of shipbuilding now under way is shared mainly by three bureaus, each headed by a Rear Admiral, each operating under its own budget, each jealous of what it believes to be its own rights and prerogatives. There has been friction between the Bureau of Engineering and the Bureau of Construction and Repair, friction between the Board of Inspection of Survey and the Bureau of Engineering. To conditions of this kind must be attributed a substantial part of the delay which has occurred in the navy's shipbuilding program, and in the procurement of other supplies for both the army and the navy.

What is needed is the reorganization of certain parts of our defense machine, the appointment to key positions of relatively young and vigorous men who are primarily administrators, and the delegation to these men of the necessary authority and responsibility for the work which is now at hand

2117

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

Some continuity of command and administration is essential. Those officers who have shown themselves to be adept at procurement and procurement-planning should be retained at their present posts for an indefinite period. Routine transfers should be avoided in the midst of a new national defense program.

There are in the army and the navy many well-trained officers of high administrative ability. The selection of such men for key positions within the two departments; the abolition of politics from the promotion methods to the two services; the adoption of whatever new legislation is needed to cut red tape and promote efficiency; the redefinition by Congress of the duties of the Assistant Secretaries of War and Navy, and of the duties of the Chief of Naval Operations—these are the first essential steps to be taken in solving the program of industrial planning for national defense. Such a program is wiser than the re-establishment of a War Industries Board or the creation of a separate Department of Munitions, if only because of the inevitable resentment that would arise in the War and Navy Departments at the establishment of any superimposed agency. But it is certain that unless these two departments put their own houses in better order, there will be public demand for the creation of a new coordinating agency.

It remains only to be said that in solving the industrial problem for the army and the navy there is no reason or excuse for the passage of any such measures as the May bill, that "blueprint of dictatorship" which was so seriously considered in the House of Representatives eight months ago. There is no need for blanket legislation of this kind, no need for enacting now a program of government by fiat, no need in advance of war to legislate a surrender of that personal liberty which daily becomes more precious in a world that circumscribes and restricts all freedom. If war comes, there will be time to consider how far we need to go in the matter of increasing governmental authority. Meanwhile, in planning efforts to strengthen our national defense we must be careful not to draw a blank check on the future.

THIS PAGE IS DECLASSIFIED IAW EO 13526

NATIONAL DEFENSE

A Program for Congress

There are compelling reasons why it is essential at this time to consider an increase in the defensive forces of the United States. We are living in a new age of imperialism and we have our own interests to conserve in a disordered world. We find that other nations have been building certain types of armaments at a much more rapid pace than ours, and we are driven irresistibly to the conclusion that so long as this continues the ordinary rules of common sense require that we be prepared. We find in the case of our own armaments that entirely too much emphasis has been put upon the more dramatic aspects of a defense program, and that too little emphasis has been put on the less dramatic, all-important details.

In the light of these circumstances it has become necessary to reconsider the fundamentals of a sound policy of national defense. The question should be approached without hysteria, without politics and without yielding to the temptation — which will undoubtedly arise when Congress reconvenes — to tie in a program of national defense with a new program of "pump-priming," undertaken this time in the name of patriotism, seeking to concentrate attention exclusively on those types of armament which can be built most rapidly, regardless of whether or not they are most needed, because they offer the quickest way of making jobs or of boosting the business index.

The principal needs of our armed forces today should be supplied through a coordinated program so planned and so directed that haste does not mean waste and that none of our forces are automatic rifles and an adequate reserve of ammunition. Coastal fortifications should be strengthened and the defenses at Panama should be increased.

For the Air Forces

Instead of attempting to rush wildly into a program of new construction far beyond our present production rate, and certain, incidentally, to disrupt our whole commercial aviation industry, it would be better to plan for a gradual expansion which would increase the navy's strength in planes to the minimum figure of 3,000 already authorized and increase the army's strength to the same number. More adequate research in such matters as aerodynamics and aviation engineering is needed. Ways ought to be found to avoid delays in procurement and to economize on the time now spent in the testing of new models. Control of their own aviation forces should be retained by the army and the navy, but a better coordination between the two services has become imperative. The proposed air bases in the New England States, in Puerto Rico and in Alaska and the Aleutian Islands should be provided promptly.

For the Organization of Supply

By means of "educational orders," by means of mass orders, and in some few cases by means of Government subsidy, the industries of the country can be placed in a better position than they are today to supply the army and the navy with the essential materials and implements of national defense in case of an emergency. There are certain problems of organization in Washington which need to be ironed out. Friction between (and within) the War and Navy Departments is an expensive luxury as matters stand today. Both departments are in need of overhauling.

* * *

These are the immediate requirements of a sound policy of national defense under the control of a civilian government. They can be put into effect as soon as Congress meets, if public opinion is ready to support them. At the same time it is important not to lose sight of longer needs and of larger objectives. Without in any way postponing the fulfillment of the immediate and well-demonstrated needs of the army and the navy, the President could well appoint an expert advisory commission to consider within the next six months the whole question of our probable future needs in the matter of national defense. The goal of this commission should be to recommend for the first time a correlated program for all our defensive forces, adequate to our own national needs and to our obligation under the Monroe Doctrine to help defend the integrity of the two Americas.

THIS PAGE IS UNCALSSIFIED

expanded needlessly at the expense of others. The outlines of such a program were discussed in detail in a series of editorials on this page last week. The recommendations toward which this discussion pointed may now be summarized:

For the Navy

Rather than the creation of a gigantic "two-ocean" fleet, which could only be constructed at inordinate cost, the rounding-out of our present fleet is much to be preferred. More aircraft carriers, cruisers, destroyers, submarines and fleet auxiliaries are needed. In the enthusiasm of building them we ought not to overlook the necessity of an increased personnel to man these ships and of a steady supply of guns and torpedoes. Particularly does the navy need a reorganization and expansion of its shore establishment in the interest of more rapid and efficient shipbuilding. During the last five years few ships except submarines have been finished on time; today most of them are months behind schedule.

For the Army

A moderate increase of personnel—20,000 men for the Regular Army and 15,000 for the National Guard—is warranted under existing circumstances. With this increase should go a tactical reorganization of the army and a geographical redistribution of its troops. Political army posts should be abandoned and the army concentrated in large enough units to give us an adequate protective mobilization force. Better training facilities should be provided. Both the Regular Army and the National Guard need additional equipment, particularly in the matter of gas masks, anti-tank guns, semi-

THIS PAGE IS DECLASSIFIED IAW EO 13526

A NATIONAL DEFENSE PROGRAM

4—An Adequate Air Force

Because the plane is the most spectacular of all instruments of battle and because it has brought the horrors of war home to civilian populations everywhere, aerial forces have been more dramatized in the interpretation of recent events in Europe than either land forces or sea forces. In the public mind the peace of Munich was a peace dictated by German armadas in the sky. To the man in the street the lesson seems obvious: the air is the medium of conquest and the plane is the dominant weapon of the day.

In view of this widely held but partially mistaken belief, it is convenient to consider here, as parts of the same problem, the present needs of both our army's Air Corps and our navy's Bureau of Aeronautics. But this should not be understood to imply endorsement of any move for a separate Air Department, a change which would require a radical revision of our whole national defense organization. Most impartial experts are agreed that at present and for the foreseeable future the existing division of responsibilities for air defense between the army and the navy is particularly suited to our geographical and strategical position.

Our combined air services today are clearly equal to, if not better than, the air fleets of the rest of the world in quality, and in quantity of first-line fighting planes are closer to the world's leaders than some exaggerated figures emerging from Germany and other nations would indicate. Nevertheless, some strengthening of our present forces is necessary and desirable, as part of a carefully planned defense program.

One immediate need is a considerably larger fund for research purposes, for in this respect our present efforts do not match what is being done in Germany, Italy and England. Hand in hand with pure research in such matters as aerodynamics and aviation engineering should go an expansion of practical experiment. There is need of further development of liquid-cooled engines like the Allison, and also of Diesel engines for aviation use. The autogyro should be studied further. Both the army and the navy should continue the development of long-range planes.

Such a program should be supple-

THIS PAGE IS UNCALSSIFIED

mented by the immediate acquisition of additional planes. Our strength in the air today is not sufficient for our defense needs, although no tremendous increment is needed to make it so. For the Atlantic and Pacific are still effective barriers to the only kind of air attack that is of military consequence —continuous mass bombing—and without bases in the Western Hemisphere such an attack on us is impossible. So long as our navy is strong, the acquisition of such bases by a likely enemy is out of question.

But the navy needs an adequate air force, and it has at hand today fewer than two-thirds of the 3,000 planes authorized at the last session of Congress. The army has perhaps 1,800 to 1,900 planes. In both services the number of obsolete and experimental ships probably nearly equals the number of new ships under contract. In view of recent events abroad the army's authorized maximum strength of 2,320 planes should be increased to a figure comparable with the navy's goal of 3,000 planes, with emphasis on strengthening the combat planes of the General Headquarters Air Force. For both services, procurement methods should be speeded up. While care should be taken to avoid a hasty and overambitious program which might disorganize the industry, the production capacity of our factories should be gradually increased.

In addition to these major requirements the nation's two air forces have other corollary needs. There must, of course, be an increase of personnel in order to provide the dozen or so men per plane needed to pilot, maintain and operate the additional ships required. An expanded program of training will be necessary and has in fact been planned. Equipment is needed also. Pursuit ships are no good without machine guns, and more of these must be supplied. Air corps repair depots must have proper tools and equipment. Enough tenders should be built to service the navy's long-range patrol planes.

Finally, air bases are needed. The Wilcox bill has outlined a program for the army. For the navy a board of experts is now completing its studies and will shortly report to Congress. The proposed bases in the New England States, in Puerto Rico and in Alaska and the Aleutian Islands should be provided first. So far as the air is concerned they are in the front lines of our defenses.

THE NEW YORK TIMES, THU

Midget Destroyers to Guard British Shipping; Craft Will Fight Submarines and Planes

12,22,38

Wireless to THE NEW YORK TIMES

LONDON, Dec. 21.—The construction of large numbers of small fast destroyers as guardians of merchant shipping in wartime was foreshadowed in the House of Commons today.

"The numbers of anti-aircraft and anti-submarine escort vessels available when the recent mobilization took place were inevitably smaller than the Admiralty would wish," said Geoffrey Shakespeare, Parliamentary Secretary to the Admiralty, answering a questioner.

It is understood next year's naval estimates will provide for one and possibly two flotillas of midget destroyers of World War tonnage, but with present-day engines and with anti-aircraft and anti-submarine equipment for use with the merchant fleet. The big destroyers, which have been approaching in size the light cruisers, thus will be freed for service with the battle fleet instead of being wasted on convoy duty.

The name of the 35,000-ton battleship Anson, now being built at Clydebank, was changed today to Duke of York, possibly as a tribute to King George VI, who held that title for sixteen years before his accession to the throne.

The new name is thought to be more appropriate because the vessel is to be a sister ship to the new battleships King George V and Prince of Wales, now half completed under the 1936 program. The two remaining 35,000-ton ships now under construction will be called Beatty and Jellicoe in honor of World War admirals.

2123

A NATIONAL DEFENSE PROGRAM

I —Fundamentals of a Sound Policy

The peace of Munich, the conquest of Ethiopia and the overrunning of China by the armed forces of Japan have demonstrated that we are living in a new age of imperialism. We have our own interests to conserve in this disordered world. Those interests do not stop at our own borders. We cannot forget that the first line of our defense lies on the highways of the sea. Nor can we forget that there are rich lands to the south of us, lands now protected by few armaments and subjected to a steady infiltration of ideas alien to our own, which a few years hence may become a base of operations directed, if not against our own territory, at least against every principle of democratic government in

such armaments as we possess today. Wherever the fault lies, in Congress or elsewhere, too much emphasis has been put upon the more dramatic aspects of an armament program and too little emphasis on the less dramatic, all-important details. We have some excellent coast defenses, but a number of them are not even manned. We have large quantities of certain types of field artillery, but most of our ammunition is too old to be effective. We are building new destroyers and submarines, but we haven't enough torpedoes for them. We have one of the best light tanks in the world, but not a single modern anti-tank gun in the hands of American troops.

Second, there is the unpleasant but indisputable fact that armaments are wholly relative. Ships and guns, tanks and planes must be matched against the ships and guns and tanks and planes of other nations. And other nations, particularly a group of nations in whose purposes we have least reason to feel confidence, have been building certain armaments at a much more rapid pace than ours. So long as this continues, the ordinary rules of common sense and prudence require that we be prepared.

* * *

These are the essential arguments in favor of a further increase of American armaments at this time. To us they are convincing. They do not warrant a sudden sensational expansion of either our army or our navy. But they do constitute valid and persuasive reasons for giving prompt support to a new arms program that is intelligently conceived and specifically planned to meet the needs of the present situation.

There are three dangers to guard against:

First, there is the danger of hysteria, always present in matters of this kind. Unless we watch ourselves, we can easily become involved in a panic over a complete "defenselessness" which does not exist in fact, and be swept along on a high tide of oratory toward wholly unreasonable objectives.

Second, there is the danger of over-simplification of the problem: the danger that we shall concentrate our whole attention on one type of armament of a particularly dramatic character—airplanes, for example—when what we need above all else is a better balanced and better rounded force.

Third, there is the danger that the whole defense program will become involved with some new "pump-priming" plan, and that we shall begin building certain armaments not because we need them but because they offer the quickest way of making jobs or of boosting the business index.

It is as important to guard against these dangers as it is to arm. The situation calls for clear thinking on the part of every citizen. In an effort to contribute toward such thinking, THE TIMES begins today the publication of a series of seven editorials, to appear consecutively each day this week, dealing with problems of national defense. These editorials will consider the present needs of the armed forces of the United States on the sea, on land and in the air.

A NATIONAL DEFENSE PROGRAM

I.—Fundamentals of a Sound Policy

The peace of Munich, the conquest of Ethiopia and the overrunning of China by the armed forces of Japan have demonstrated that we are living in a new age of imperialism. We have our own interests to conserve in this disordered world. Those interests do not stop at our own borders. We cannot forget that the first line of our defense lies on the highways of the sea. Nor can we forget that there are rich lands to the south of us, lands now protected by few armaments and subjected to a steady infiltration of ideas alien to our own, which a few years hence may become a base of operations directed, if not against our own territory, at least against every principle of democratic government in which we believe whole-heartedly. If there is one doctrine of foreign policy to which the whole American people subscribe, and upon which the whole American people will be prepared to act if necessary, it is Monroe's doctrine that the western world belongs to the western nations.

In the light of these circumstances it is essential to reconsider the fundamentals of a sound policy of national defense.

* * *

It would be a mistake to believe that the American people are not already arming. We are spending today more than a billion dollars annually for national defense. That enormous sum has never before been equaled in any year of peace. Our forces on land, on the sea and in the air are stronger than they have ever been except in times of war. The last Congress authorized an unparalleled peacetime naval program which will increase the overall strength of our fleet by a probable 50 to 75 per cent. We have spent nearly two billion dollars during the past five years for the maintenance and improvement of our army. We are spending more than $150,000,000 annually on our air defenses, which is twice as much as we spent in 1933.

There can be no question, in these circumstances, of American "rearmament." We are already armed, and we may at once admit that "rearmament" is a misleading term. The real question is whether we should add to the extensive armaments we now possess, and on that ground the issue should be faced openly and frankly.

Why should it be necessary now to increase the armaments we have? Why should it be necessary to add more taxes to the heavy burden of taxation imposed upon American business, or to follow the alternative course of borrowing more millions from the banks? Why should it be necessary to invest in instruments of death and destruction funds which could be used more profitably for purposes of slum clearance and new housing, for the construction of roads and bridges, for the reforestation of hillsides and the control of floods, for the building of schools and hospitals and parks?

* * *

The case for a further increase of American armaments rests upon our inescapable interest in helping to protect the integrity of the two Americas and upon two immediate and immensely practical considerations.

First, there is the necessity of rounding out, into a better balanced and more modern machinery of self-defense,

danger that we shall [illegible] whole attention on one type of armament of a particularly dramatic character—airplanes, for example—when what we need above all else is a better balanced and better rounded force.

Third, there is the danger that the whole defense program will become involved with some new "pump-priming" plan, and that we shall begin building certain armaments not because we need them but because they offer the quickest way of making jobs or of boosting the business index.

It is as important to guard against these dangers as it is to arm. The situation calls for clear thinking on the part of every citizen. In an effort to contribute toward such thinking, THE TIMES begins today the publication of a series of seven editorials, to appear consecutively each day this week, dealing with problems of national defense. These editorials will consider the present needs of the armed forces of the United States on the sea, on land and in the air.

Wireless to THE NEW YORK TIMES.

LONDON, Feb. 5.—While the police search for more terrorist bombs of a sort that shattered two tube stations here last week, London thinks it can hear the steady ticking of still more dangerous time fuses planted by leaders of the "axis" powers.

Nobody knows just where the diplomatic bombs have been planted or when they will explode, but there is a fairly widespread belief that they will go off simultaneously in the Western Mediterranean and somewhere nearer Germany in the form of violent demands by the dictatorships upon the Western democracies.

How then will Prime Minister Neville Chamberlain react? Will the British Government resist a "second Munich" or will Mr. Chamberlain still be ready for a "peaceful redress of grievances" for the sake of averting the horrors of a new war?

There are signs this week-end pointing both ways, but in the light of all that happened last September indications of a willingness to accept a "second Munich" are too many to be ignored. If peace was worth so much last year, it is no less precious to British now. It may become doubly precious in the next few weeks if the controversy over neutrality in the United States should shake the present confidence of the British that they could get all the American supplies they needed in time of war.

Change in Attitude Noted

It is true that in the last few weeks a striking change has come over the public attitude of the British Government. Lord Chatfield, who is not only an outstanding naval officer but also one of the closest friends of Winston Churchill, will take over his new duties tomorrow as Minister for the Coordination of Defense. He flew all the way from India to lose no time and he is expected to put new energy into the effort to make Britain strong. The curve of British airplane production is rising steeply, although the monthly production rate is little more than half the German rate and it is not yet believed to be catching up appreciably with the rising output of the German factories.

Whatever their relative position may be, the British have suddenly abandoned their former technique of harping on the "deficiences" of the past. The stream of official confidence being pumped out to newspapers and political speakers is an effort to show the world that Britain now feels muscles in her arms that were not there in September.

A prodigious amount of organizing work has been done on civilian defenses in the last few weeks; orders for air raid shelters, gas masks and hospital equipment have followed one another in striking succession, and only last week the country learned that the twelve re-

Continued on Page Six

'MUNICHMENTALITY' A FACTOR IN BRITAIN

Continued From Page One

gional governments would soon be ready to function in time of war, in case communication with London is cut off by enemy bombers.

A national register of man power, unprecedented in peacetime, is now being compiled on a voluntary basis and, although recruiting for the various civilian services has fallen off since Chancellor Hitler's "reassuring" speech on Monday, the campaign at least shows that the British Government is waking up to the perils of the present situation in Europe.

"Deeds, Not Words" Stressed

Proof has come also from the speeches of government leaders, from Mr. Chamberlain down. Mr. Chamberlain went so far the other day as to speak of the "somewhat similar circumstances" that confronted William Pitt—as if the present Prime Minister now knows that he is facing a Napoleonic situation in Europe.

And not only Mr. Chamberlain but all his lieutenants are placing new emphasis on the "deeds, not words" of peace as prerequisites for the starting of any general negotiations with the axis powers.

But what has been called "the Munich mentality" is still very much alive in Downing Street. The Prime Minister has insisted again and again that he has no regrets over Munich and only the other day he said he would do it all over again if the same circumstances arose. Before many months similar circumstances may arise and to some they appear to be taking shape already.

Until the last few days of the protracted Czech crisis last year the British Government proceeded on the assumption that Herr Hitler wanted nothing more than the "unification" of the German-speaking peoples of Austria and the Sudetenland with the Reich; today there is a similar belief in Downing Street that Italy can be satisfied by the "adjustment" of minor "grievances" concerning Jibuti, the Suez Canal and Tunisia.

Not only Mr. Chamberlain but many of his Conservative colleagues and some of his most experienced advisers are confident that Italy will withdraw all her troops from Spain and keep no territorial or other advantage when

foreign power to dominate the Low countries.

Means Little to British

Moreover Holland means curiously little to the mass of the British public just as Czecho-Slovakia, in Mr. Chamberlain's words, was a "far away country" of which "we know nothing."

The average Englishman is apt to think of The Netherlands as a commercial rival, He is much less conscious of it as a home of Rembrandt or Erasmus or as the cradle of democratic institutions in West-

nomic collapse in Germany. Viscount Halifax, the Foreign Secretary, who is one of them was perfectly sincere the other night when he said that Britain did not want to choke Germany's world trade. In this, as in their desire for peace with Hitler's Germany, their motive is not pro-fascism, pro-Nazism or anti-communism, although Herr Hitler can still disturb many British Tories by warning them that the alternative to his regime is communism in Germany.

The real motive of "appeasement" is the longing for peace and the fear of war that might crack the

reassuring speech on Monday, the campaign at least shows that the British Government is waking up to the perils of the present situation in Europe.

Before many months similar circumstances may arise and to some they appear to be taking shape already.

Until the last few days of the protracted Czech crisis last year the British Government proceeded on the assumption that Herr Hitler wanted nothing more than the "unification" of the German-speaking peoples of Austria and the Sudetenland with the Reich; today there is a similar belief in Downing Street that Italy can be satisfied by the "adjustment" of minor "grievances" concerning Jibuti, the Suez Canal and Tunisia.

Not only Mr. Chamberlain but many of his Conservative colleagues and some of his most experienced advisers are confident that Italy will withdraw all her troops from Spain and keep no territorial or other advantage when the civil war is over. They are sure that if Italy will not withdraw them voluntarily the Spanish people and the new Spanish Government will do so. As for Italy's pledge to respect the "status quo" elsewhere in the Mediterranean—including Morocco, Tunisia and Palestine—Mr. Chamberlain feels bound to trust it until it is broken.

Troop Concentrations Growing

Th growing concentration of Italian troops in Libya, with an unknown number of German officers and technicians, has not passed unnoticed in London, but Mr. Chamberlain also appears genuinely impressed with the assurances Signor Mussolini gave him in Rome.

If Italy, with German support, should be foolhardy enough to attack France on the borders of Tûnisia there is little doubt here that Britain would help France resist, although the British commitment to France does not extend to French colonies. But if the technique of Munich is followed—the technique of threats backed by military force—enough of the Munich spirit remains in London and Paris to affect Anglo-French policy profoundly.

For if Mr. Chamberlain had his way now the Italians would come politely to Paris with their hats in their hands and would go home with a free zone in the harbor of Jibuti, a share in the directorship of the Suez Canal and additional privileges for Italians living in Tunisia. The Prime Minister wants the French to establish normal, friendly relations with Italy and the Franco regime in Spain—all in the unexpressed hope that he can at least bend the axis and keep Italy neutral in the first few weeks of war between Germany and the Western powers.

As for Germany, it is too early to say that the British would resist a repetition of the Munich method. An example is the case of The Netherlands. A military attack on The Netherlands would almost certainly bring British intervention; but an economic or ideological "squeeze" would be a different story. It is remembered that The Netherlands was never mentioned in former Foreign Secretary Anthony Eden's famous list—repeated several times by Mr. Chamberlain—of things that Britain would fight for. Belgium was included but not The Netherlands although it has been regarded as an axiom that Britain could not permit any foreign power to dominate the Low countries.

Means Little to British

Moreover Holland means curiously little to the mass of the British public just as Czecho-Slovakia, in Mr. Chamberlain's words, was a "far away country" of which "we know nothing."

The average Englishman is apt to think of The Netherlands as a commercial rival. He is much less conscious of it as a home of Rembrandt or Erasmus or as the cradle of democratic institutions in Western Europe.

The fault is partly with The Netherlands; just as the Czechs neglected their propaganda in Britain so The Netherlands have sent chiefly business men to London and very few writers or speakers who could impress upon the British Conservatives what Holland means politically and culturally to the Western world.

In any case the prevalent British conception of The Netherlands as rather disagreeable, stubborn business rivals is one that will influence world events if the Germans, for example, should divert their Rhine traffic from Rotterdam as economic pressure and then seek to encroach upon Holland's tolerance and freedom.

The German colonial claim is another point which the "Munich mentality" may easily make itself felt in spite of a decided stiffening of the British attitude recently. It is true that vast numbers of British Conservatives, who had no particular interest in Czecho-Slovakia, would be inclined to resist any cession of British colonial or mandated territory to Germany. The world had a taste of this resistance in 1935 when Sir Samuel Hoare, then Foreign Secretary, suggested appeasing Italy by a cession of Zeila, a forlorn desert port in British Somaliland. The outcry from Conservatives in the House of Commons might have prevented the deal being completed, even if Italy had been willing.

British Have Guilty Conscience

Yet the British also have a guilty conscience over their colonial acquisitions in 1919. They have an uncomfortable feeling that Herr Hitler has some justice in his arguments. Moreover workingmen in this country have no taste for "Imperialistic war" over distant colonies and it would be hard to arouse in them any enthusiasm for laying down their lives over such an issue. For all these reasons Mr. Chamberlain's government would discuss the colonial reshuffle if, as the Prime Minister suggested the other day, it could have a disarmament offer or some other tangible proof of Germany's peaceful intentions. And some prophets argue that if the combined pressure from Germany and Italy is severe enough the British might concievably be willing to discuss colonies without any prior assurance whatever.

For the truth of the matter is that many British Conservatives—even those who detest and fear Nazism—do not want to see an economic collapse in Germany. Viscount Halifax, the Foreign Secretary, who is one of them was perfectly sincere the other night when he said that Britain did not want to choke Germany's world trade. In this, as in their desire for peace with Hitler's Germany, their motive is not pro-fascism, pro-Nazism or anti-communism, although **Herr Hitler can still disturb many British Tories by warning them that the alternative to his regime is communism in Germany.**

The real motive of "appeasement" is the longing for peace and the fear of war that might crack the political, economic and social structure of this country beyond repair, whether Britain won the war or not. **Mr. Chamberlain and his colleagues feel sure that the British Empire could survive a war with Germany at the cost of untold human misery;** but they are not so sure that the men and the system, which have ruled this country for so many years, will still be ruling it when the war is over. This is why, in spite of all indications to the contrary, the "Munich mentality" is still a force to be reckoned with on the eve of the new diplomatic showdown in Europe.

NAZIS WILL TRAIN FLIERS

Party Corps to Take Over Pre- and Post-Military Work

Wireless to THE NEW YORK TIMES.

BERLIN, Feb. 5.—Still another National Socialist organization was charged with pre-military and post-military training of German manhood when an announcement was made yesterday that "the National Socialist flying corps in the future will take over the training of those who will serve or have served in the air force."

Flying schools for this purpose have already been established at Koenigsberg, Hamburg, Bielefeld and Karlsruhe and others are being built.

Berlin dis-

patch above, in which Britain's total submarine tonnage is put at 63,504 and the German at 31,282. Berlin says Britain has 63 craft built and building and Germany 65.]

Reich Has Many Tiny Craft

In total number of undersea craft, however, Germany will soon approach Britain. This is because a large part of the German submarine strength is in tiny 250-ton vessels suitable only for service in the North Sea and unable to operate as far from home as Bristol Channel.

In another twelve months Germany is expected to have at least seventy submarines in service, mostly of midget tonnage. Britain, on the other hand, will have sixty-nine in service, including at least forty-five ocean-going craft and not counting those that may be authorized under next year's program.

Unless Germany embarks on the construction of big submarines, her navy will not be able to interfere with Britain's oceanic trade routes as she did with such catastrophic effect in the World War. Her swarms of 250-tonners will, however, enable her to make the North Sea dangerous if not impossible for British shipping and may even prevent the British from using the port of London.

This has been known in London for a long time and the German notification now will not cause the Admiralty to change its wartime plans. It has been understood that in the next war the British Navy will not attempt to operate in the North Sea but with its base at Scapa Flow will hold a blockade line from the Hebrides to the Norwegian coast.

Because of the danger of air attack as well as of submarines British shipping will have to use the ports of Western England, Wales and Scotland.

No Great Alarm on Cruisers

If Germany intends to build two additional 10,000-ton cruisers, this too will not cause the British overmuch concern, although naturally they would like to prevent it.

Other nations are precluded under the treaty from building 10,000-tonners. The British have fifteen such cruisers, most of them comparatively old and clumsy; the Germans have launched three within the last two years—the Bluecher, the Admiral Hipper and the Prinz Eugen—armed with eight 8-inch guns.

Under the 1935 treaty Germany was allowed to possess five of these craft, but she laid down only three. In 1937, however, Russia won the right to build cruisers with 8-inch guns while other nations were still bound not to build any above 6.1-inch gun caliber. Accordingly, Germany claimed the right to build the remaining two of her heavy cruiser quota if special circumstances arose.

One oft he tasks of the British Admiralty misison now in Berlin is to discover what "special circumstances" have made it necessary not only to build additional heavy cruisers but also to seek parity in submarines.

The Absorbing Quetsion

The absorbing question of the moment, of course, is whether the present notification by Berlin is the first move toward denunciation of the naval treaties.

In a quantitative building competition with Britain it is useless for Germany to seek to escape the 35 per cent limit, for it is the universal belief here that she cannot possibly race Britain in new tonnage. She has not the necessary raw materials, she has not the money and she has not the shipyard facilities.

But the 1937 agreement with Britain is a different story, for this is a qualitative agreement fixing the sizes of ships and gun calibers in every category.

If Germany wanted to make mischief for Britain without too much expenditure, she might denounce the 1937 agreement and begin secret building of new types that might render whole sections of the British and French fleets obsolete. The German naval designers are ingenious, as the pocket battleships have proved, and they might make infinite trouble for the Admiralty by producing ships of a forbidden tonnage or gunpower.

For the present, however, it is believed in London that the Germans will stretch the existing treaties to the limit without actually denouncing them.

The time for denunciation may come if and when Germany tries to limit the size of the British air fleet, as Britain three years ago limited the size of the German Navy. Rejection of such a demand by Britain might be a pretext for denunciation of the naval treaties if Germany felt that it would serve the interests of herself and her Italian and Japanese allies.

TAXI STRIKE BEGINS; LITTLE DISORDER; MAYOR INTERVENES

La Guardia Invites Both Sides to City Hall Parley Today to Urge Mediation

HEAVY POLICE GUARD OUT

Force Put on Emergency Basis —Union Demands a Larger Share in Receipts

A general strike of taxicab drivers in the city, affecting 11,000 men operating 8,500 cabs and some 2,000 maintenance men, was called yesterday by the Transport Workers Union, C. I. O. affiliate, in support of demands for a larger share of receipts, improved working conditions and more thorough unionization of the industry.

The strike was voted by members of the union at meetings last week, when the officers were empowered to set the date of the walkout, after negotiations for a new agreement had ended in a deadlock.

Union officials charged that the large operating fleets had "sabotaged" the negotiations and were seeking to institute company unions.

Late last night the effectiveness of the strike appeared to be increasing. Representatives of the Parmalee, Terminal and other large operators asserted that the strike call had made little difference in operation schedules, but union officials declared that 8,500 men and 7,000 cabs were idle, in addition to 1,000 maintenance men. There was increasing evidence in the streets of the effect of the walkout, with visible diminution in the usual number of cruising taxis. About 5,000 drivers who operate their own cabs were not affected by the strike call.

Observers in the Times Square area last night estimated that about 40 per cent of the cabs seemed to have been affected by the strike. Union officials asserted that the strike was 85 per cent effective and that it would reach complete effectiveness by **this morning.**

Tokyo Cabinet Out, Split Reported Over Policy to Be Followed in China

Konoye Resigns as Talk Is Heard of a Rift Between Fascist and Liberal Elements— Mobilization Law Is Also a Factor

By The Associated Press.

TOKYO, Wednesday, Jan. 4.—Premier Fumimaro Konoye resigned today amid reports of a split between Fascist and Liberal elements of his Cabinet over policy in China.

The resignation was announced shortly before noon by Akira Kazami, chief secretary of the Cabinet. Prince Konoye proceeded immediately to the imperial palace to inform Emperor Hirohito.

Domei, the Japanese news agency, said that although the Cabinet had **resigned the resignation would not become effective until after the prolonged Japanese New Year holiday,** which extends through Thursday.

Technically, Prince Konoye in his interview with the Emperor will ask permission to resign. He may be asked to form a new Cabinet himself.

A factor in the reported differences within the Cabinet was said to be the question of what "long-term construction" policies should be promulgated inside Japan and how rigidly they should be enforced. Some Ministers were said to have demanded full enactment of the National Mobilization Act and others control of the China Affairs Board.

The government long had recognized that the most critical period of the China war would come after positional warfare had ended and the nation undertook the enormous task of consolidation on the continent. The most urgent needs now are money and raw materials, and hence restrictions upon the national life are expected to become even more stringent.

The China Affairs Board, termed the "second Foreign Office" and designed to administer Japan's control over conquered China areas, already is credited with having brought the resignation of General Ugaki, former Foreign Minister. [General Ugaki, a Liberal, opposed the army on the general lines of its policies.]

It was reported that reactionaries were seeking to abolish or fuse political parties before Parliament convenes Jan. 20 and perhaps to dissolve that bdoy. The fact that the Diet must approve the 1939 war budget probably would block this.

The Japanese Cabinet underwent a severe shake-up less than a year ago when four of the most powerful figures in Japan, three of them generals, were appointed Ministers. The aim was to strengthen the government in a "united front" to bring a quick end to the undeclared war in China.

One of the most important changes was the appointment of General Seishiro Itagaki as War Minister, succeeding General Gen

NAVY BOARD URGES 41 DEFENSE BASES FOR ENTIRE NATION

Would Cover Atlantic and Pacific With Air, Submarine and Destroyer Units

TWENTY-FIVE FOR PLANES

Congress Is Advised in Report to Establish Fifteen of These at Once

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 3.—**The Naval Board which Congress directed in the Naval Expansion Act of 1938, to survey the coastlines of** the United States and its possessions and report on sites which in the board's opinion are best suited for the establishment of air, submarine, destroyer and mine bases, necessary to the adequate defense of the United States and its possessions, submitted its findings to Congress today.

The report, the most complete ever written so far as the air and submarine defenses of the nation are involved, will be referred tomorrow to the House Committee on Naval Affairs and a bill, embodying the recommendations of the board, is expected to be one of the first defense measures to go before the session.

The board, of which Rear Admiral Arthur J. Hepburn, former commander-in-chief of the fleet, is the president, sets forth that at present forty-one bases, twenty-five of them for the Naval Air Service, are necessary to the proper protection of the Continental United States, Alaska, the Canal Zone and the island possessions. The need for shore-based facilities for naval aircraft, "far outshadows" the need for additional submarine, destroyer and mine bases, but this does not mean that the latter are not also necessary, says the report.

Urges Air Bases at Once

Of the twenty-five **air bases recommended, fifteen, in the opinion of the board, should be established** immediately. Eleven of these would be in the Pacific, the others in the Atlantic.

Dies Report Attacks Alien Isms; Ickes, Perkins, Murphy Assailed

Cabinet Officers Accused of Trying to Cripple Committee's Work—Two-Year Inquiry and $150,000 Fund Sought

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 3.—In a 185-page document assailing three Cabinet officers and other officials, and charging Communist infiltration into the Federal Government and Nazi penetration into secret national armament records, the special House committee investigating un-American activities for the last six months submitted its final report to Congress today.

The committee, whose life legally ended at noon, asserted, however, that it had only scratched the surface and asked that it be reconstituted and that $150,000 be provided to continue its inquiry for two years more.

The report charged that Secretaries Ickes and Perkins sought to cripple its activities, inferentially attacked Frank Murphy, new Attorney General, for his alleged intolerance of sit-down strikes while Governor of Michigan, and said that Nazi agents were functioning in airplane factories and had obtained secret plans for the newest battleships.

Although all seven committee members signed the report, Representative Healey of Massachusetts withheld his approval until today and then voiced agreement with it in a statement criticizing some of the committee's activities and methods of operation.

Representative Keller of Illinois, not a committee member, also offered a mock resolution ridiculing these activities and those of the chairman, Representative Dies of Texas. Mr. Keller proposed that the chairman marshal the Nazi group's "116 more or less followers" and the Communist party's "113 red shirts" and let them fight the issue out with each other "on the road to Mandalay."

The report recognized widespread criticism that had been made of the inquiry, pointing out that the committee had only $25,000 and received none of the departmental aid asked for.

It added that "unless the committee is supplied with adequate funds, with the definite understanding that the investigation shall continue along non-partisan lines," it should not be continued.

Because it was able merely to skim the surface of the subject, the committee said, it was unable

HOPKINS IS NOT CENSURED

But McNary Hints That Report Means Promotion Fight—16 Reforms Urged

Findings of Senate Committee are printed on Page 12.

By The Associated Press

WASHINGTON, Jan. 3.—Four Democratic Senators and one Republican who investigated last year's elections gave the new Congress its first assignment today: outlawing "unjustifiable political activity," which they said had occurred in connection with the Works Progress Administration in several States.

Reporting to the Senate as its Committee on Campaign Expenditures, the group declared that funds appropriated for the relief of those in need and in distress had been diverted in many instances to political ends.

Although the committee fixed no responsibility for this condition upon Harry L. Hopkins, the former WPA Administrator, whom President Roosevelt appointed recently to be Secretary of Commerce, it sustained some charges which Mr. Hopkins had denied concerning the WPA in Kentucky.

McNary Hints Hopkins Fight

Senator McNary of Oregon, the Republican leader, indicated strongly that the campaign committee's findings would be made the basis of a contest against confirmation

6

tiveness by this morning.

Mayor Urges Mediation

While Police Commissioner Valentine, after a conference with high officials and subordinates of his department, announced elaborate preparations to guard against violence, such as marked the taxi strike of 1934, Mayor La Guardia intervened by sending identical telegrams to representatives of the union and the fleet owners inviting them to a conference at City Hall at 11 A. M. today. The Mayor suggested that the union and the companies avail themselves of the machinery of the State Mediation Board and announced he would impress upon both sides "the necessity of a quick settlement."

The strike call became effective at 3 P. M., when 100 union organizers were sent to garages of the Parmelee and Terminal Systems, the two largest operators, and of twenty independently operated fleets with instructions to intercept the men going on late afternoon and night shifts. The largest of the independents affected by the strike call were the Radio, Sunray, Bell, General, Atlas and Allied companies. The Parmelee System operates normally 2,000 cabs and employs 4,000 men. The Terminal System employs approximately 1,000 men and operates 600 cabs. Another 2,000 men are employed by the Bell and Allied companies, representing together more than 1,000 cabs.

800 Report for Picketing

More than 800 strikers had reported early last evening at Palm Garden Hall, 306 West Fifty-second Street, Manhattan strike headquarters, and registered for picketing duty. Union officials in charge announced that forty-two garages were being picketed. As fast as the men registered they were sent out to picketing posts at individual garages and into the Times Square, Grand Central and Pennsylvania Railroad areas. Drivers who own and operate their cabs appeared at the hall with requests for stickers identifying them as not affected by the strike call. They were informed that the stickers would not be ready for distribution until this morning.

Brooklyn strikers reported for registration at Transport Workers Hall, 98 Flatbush Avenue, in that borough. Like those in Manhattan, scores of Brooklyn garages were picketed.

The effectiveness of the strike in Brooklyn, according to investigation made at various garages of companies affected, was on the increase as the evening progressed. Independently owned taxicabs were doing a rushing business as fares, either unable to obtain one of the regular "chain" cabs or fearing possible violence, made business even better for the independents than on New Year's eve.

In announcing the dispatch of his telegram to the strikers and fleet

eralissimo Francisco Franco's biggest success in the new year was claimed today in the capture of Artesa de Segre, thirty miles northeast of Lerida. Officers said they were "completing occupation" of the town, the center of Republican [Loyalist] defenses and communications in the Trem Balaguer area.

Republican supply trains, it is stated, must now make a wide detour through Ripoll, twenty miles southeast of Puigcerda, near the French frontier, and on to Manresa. This means nearly 200 extra miles for Republican transport along roads already heavily congested with war transport.

General Garcia Valino, one of the most active and hard-driving of General Franco's commanders, is credited with playing a major part in "the key to Catalonia," driving down from the north, while General José Moscardo pushed up from the south.

The Republicans, it is stated, offered tenacious resistance, leaving several hundred dead in their intricate network of trenches defending Artesa.

With the crossing of the Segre, the investment of Artesa and the cutting of the road leading to Seo de Urgel and Puigcerda on the French frontier, the Nationalists [Rebels] tonight boasted in an official communiqué that they had concluded "one of the most victorious days of the whole war."

More than 2,400 prisoners were reported taken today in this sector. The republicans are reported to have abandoned hundreds of dead, including a battalion commander, in their retreat.

General Camillo Alonso, commanding the army corps operating in the lower Segre sector, was said to have carried out successfully a surprise manoeuvre today by returning to the attack on Borjas Blancas. The Republicans apparently believed the Nationalists had temporarily abandoned Borjas Blancas as an immediate objective. They shifted some of their forces south to strengthen their defenses south of Falset, Reus and Tarragonna. This move today, it is stated, cost them Castelldans, seven miles west of Borjas Blancas, and 1,100 prisoners.

It was officially announced in Burgos that up to this morning more than forty towns and 19,000 prisoners had been captured. In the south, La Figueras, recorded as taken Sunday, is only six miles northwest of Falset.

Attack Declared Shifted

By HERBERT L. MATTHEWS

Wireless to THE NEW YORK TIMES.

BARCELONA, Spain, Jan. 3.—Balked in repeated and presumably costly attempts to reach Borjas Blancas through Castelldans, to the southwest, the Insurgents were reported today to have shifted the direction of their main attack in the Seros bridgehead sector due

Continued on Page Four

French protectorate gave Premier Edouard Daladier such an enthusiastic reception today that all contending claims for independence or for the protection of Italy were swamped, at least for the day. What the Premier came here to seek he got in full measure.

He wanted to see if the forces and fortifications of the protectorate were sufficient, and he found they were. He wanted personal assurance of loyal cooperation by Sidi Ahmed, the Bey of Tunis, and got it eloquently, and it was accompanied by the Order of Aned el Aman, which is usually given only to royalty or heads of States.

He wanted the assurance of the Tunisians that they were contented under the French protectorate and he got that in an emotional demonstration as the crowd broke through police and troop lines and swarmed over the avenue as the Premier drove to the Residency. It turned his arrival into a triumph.

Display Is Spontaneous

This demonstration was not staged. It was so spontaneous that the police had no time to do anything to prevent it. What had been a patient crowd suddenly became an excited crowd. It swept through the police ranks in thousands and surged triumphantly and cheering around the Premier's automobile for 200 yards until he got past the Residency gates.

Most remarkable was the fact fact that this was not a French crowd. There were as many fezes as felt hats. There were Mohammedans from Tunisia and from Algeria and Negroes from the South Sahara.

For more than two hours they had stood waiting patiently, and they are accustomed to waiting. They are accustomed, too, to hiding their emotions. But today they did not hide them.

There were also in the crowd sturdy French "colons" who had come from their farms with their families to see the Premier and cheer France. Nor are they an emotional, demonstrative type, but when the moment they had been waiting for came, when they could shout "Vive la France!" so that the Premier could hear, they forgot their wives and children in the crowd and surged forward.

There were many Jews, anxious, inquiring and disturbed about what the future might hold. There were Italians; some even took an official part in the proceedings, carrying the Italian flag with other war veterans to the memorial statue on which M. Daladier laid a wreath.

Veiled Women Take Part

There were fewer women than men, as is always the case in public in a Mohammedan country, but among them were some in white burnooses with black veils over their faces, only their eyes showing. They did not remove their veils, but they ran with the others—to see, if not to cheer—when the

ommended, fifteen, in the opinion of the board, should be established immediately. Eleven of these would be in the Pacific, the others in the Atlantic.

It is not possible at this time, the report stated, to give "any trustworthy approximation" of costs involved in the recommendations. That will be brought out in hearings, probably executive, before the House Committee on Naval Affairs. Points at which the immediate establishment of bases is recommended are:

Chesapeake Bay base, Hampton Roads, Va.

Southeastern base, near Jacksonville, Fla.

Pensacola, Fla. (Expansion of existing training station.)

San Juan, P. R.

Coco, Solo, C. Z.

Sand Point, Seattle, Wash.

Sitka, Alaska.

Kodiak, Alaska.

Ford Island, Pearl Harbor, Hawaii.

Kaneohe Bay, Oahu Island, Hawaii.

Midway Island, Pacific.

Wake Island, Pacific.

Johnston Island, Pacific.

Palmyra Island, Pacific.

Guam, Pacific.

For subsequent completion the board recommended these bases:

Northeastern base, Quonsett Point, Narragansett Bay, R. I.

Marine base, Quantico, Va.

Corpus Christi, Texas.

Guantanamo, Cuba.

Roper Use of Government Boat Criticized; Acting Controller Assails Cost of 'Parties'

By The Associated Press.

WASHINGTON, Jan. 3.—Former Secretary Roper and other high officials of the Commerce Department were accused today of using a government boat for their private entertainment.

R. N. Elliott, Acting Controller General, said in his annual report to Congress that the officials had operated for unauthorized purposes the Eala, a vessel in the service of the Bureau of Navigation and Steamboat Inspection.

The report contained a detailed log of the Eala for part of 1934 and 1935.

Mr. Elliott also contended that "such items as Poland water, flowers, cigars, cigarettes, etc., purchases for members of parties, were vouchered as paint, provisions or supplies in some instances, and were paid from the appropriation."

The report added, however, that in some instances purchases were paid for by members of the parties.

Log entries for part of 1934 read in part as follows:

"July 21, Annapolis, received orders to proceed to Washington. Party boarded vessel 11:45 A. M. en route to Colonial Beach. Party consisted of Assistant Dickinson and guests. (John Dickinson was Assistant Secretary of Commerce at the time.)

"Sept. 22, Washington, Secretary Roper and party boarded Eala 12:15 P. M., sailed to Georgetown Channel to attend races. Party left vessel 5:35 P. M.

"July 27, Washington, Miss Renn, private secretary to Secretary of Commerce, and her guests had party on Eala.

"Aug. 17, Washington, party consisting of Mrs. Roper and seven guests boarded vessel 3 P. M."

Among the entries for 1935 was the following:

"Nov. 10, Washington, Assistant Secretary Mitchell and party boarded vessel and sailed for lower Potomac River, arriving Riverdale, at 8 P. M."

The report declared that the boat was used "for unauthorized purposes exclusively" for six months, with the exception of one week. It added:

"The records show that the operating expense of the vessel for the fiscal year 1935 amounted to \$19,773.96, on which basis the cost of operations for the six months would amount to \$9,866.98, or \$380.26 per week. Accordingly, it appears that an amount of \$9,506.72 for this six month period was not authorized under the appropriation provided for inspection services."

Among the entries for 1935 was the following:

"Nov. 10, Washington, Assistant Secretary Mitchell and party boarded vessel and sailed for lower Potomac River, arriving Riverdale, at 8 P. M."

The report declared that the boat was used "for unauthorized purposes exclusively" for six months, with the exception of one week. It added:

"The records show that the operating expense of the vessel for the fiscal year 1935 amounted to $19,773.96, on which basis the cost of operations for the six months would amount to $9,866.98, or $380.26 per week. Accordingly, it appears that an amount of $9,506.72 for this six month period was not authorized under the appropriation provided for inspection services."

Republicans of Legislature Hail Governor's Idea of Not Stirring Up Controversy

By WARREN MOSCOW

Special to THE NEW YORK TIMES.

ALBANY, Jan. 3.—Governor Lehman sent word to the legislative leaders today that so far as he was concerned they could count on a non-controversial session of the Legislature. The news was received with approval by Oswald D. Heck, Speaker of the Assembly, and Perley A. Pitcher, the new majority leader of the Senate.

The word conveyed to the Republican leaders was that the Governor, in his annual message tomorrow, will declare the implementing of the new Constitution and the refining of laws already on the statute books, to be the principal task confronting both the Legislature and the Executive, although, of course, the recurring problems such as relief financing will be up as usual.

The Governor will not recommend the enactment of health insurance legislation at the current session. He feels that the problem is a far greater one, involving more people and more money than workmen's compensation and that extensive study must be given to it. This fits in with the Republican ideas. The New York County Republican advisory committee has publicly **recommended further study by an** enlarged committee. Whether the **committee will be enlarged has** not **been decided. The committee was created last year as the result of legislation sponsored by Robert F. Wagner Jr. and Leon Fischel.**

Republicans in No Rush

The Republicans have not attempted to work out a legislative program, counting on developing it as the session goes on. The members of Senate and Assembly alike were elected for two-year terms last Fall, and there is no point, responsible Republican leaders feel, in pushing a hastily formulated program in a non-campaign year.

They also feel that pointless controversies with the Governor should be avoided and that details of the housing and grade crossing plans can be worked out in conference. Last year, for the first time Republican leaders were called in by the Governor, even though that party controlled only one house, and the result was one of the most harmonious sessions in years. There is every prospect for continuance of that policy this year because of the Republican control of both houses.

The principal political manoeuvring in the session probably will center around the proposed legislative investigations of Albany County, the administration of which by the O'Connell organizations was attacked by Thomas E. Dewey in

Remand by Circuit Tribunal in Reinstatement Case Is Unanimously Upheld

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 3.—The National Labor Relations Board won a decision in the Supreme Court today when it ruled that the Sixth Circuit Court was correct in remanding to the board an enforcement order against the Ford Motor Company, so that the proceedings leading up to the order could be amplified. The order directed the company to cease alleged unfair labor practices at the River Rouge plant and to reinstate twenty-nine employes after labor troubles there in 1937.

Acting unanimously, except that Justice Roberts did not participate, the court laid down what seemed to be the general principle that Circuit Courts could remand board orders for further proceedings at any time for changes.

Incidentally, the opinion, handed down by Chief Justice Hughes, said that the board "sought to meet (the issue) by voluntarily doing what the court could have compelled," and that any delay was due to the Ford company's "resistance to that course."

The case hinged on procedural law—namely, whether the Circuit Court, having accepted jurisdiction of the order, could return it to the board.

Stockyards Case a Factor

The court has now agreed that this can be done and the board is free to do as it wished—that is, to hold a "full and fair hearing," as the Supreme Court, in the Kansas City Stockyards case, demanded that all administrative agencies must do before issuing orders against corporations.

The Ford opinion was the most important of about twenty rulings given out as the justices returned to the bench after two weeks of conference and study. Findings dealing with a variety of subjects were issued, for instance, upholding powers of State to control liquor traffic within their borders.

The order in the Ford case was issued by the board in December, 1937. A month later the board asked the Circuit Court to enforce the command, but last May, after the stockyards' decision, the board sought to withdraw the order, even though the transcript of proceedings had been filed. There was no secret that the reason was to include the omitted "full and fair hearing."

In June the Circuit Court remanded the case to the board over the protest of Ford lawyers, who argued that the court, having acquired jurisdiction, must either direct compliance with the order or set it aside as invalid.

Chief Justice Hughes, in his opin-

McNary Hints Hopkins Fight

Senator McNary of Oregon, the Republican leader, indicated strongly that the campaign committee's findings would be made the basis of a contest against confirmation of Mr. Hopkins's appointment to the Cabinet. He said that he would ask that the report be referred to the Commerce Committee, which would consider the nomination.

Another Republican Senator opposed to Mr. Hopkins predicted privately, however, that the former relief chief would be confirmed.

"There are a whole lot of fellows who condemn what has gone on," he said, "but regard the President's Cabinet as his own family and a matter of his own choice. I don't agree, but that is the situation."

The campaign committee was outspoken in its denunciation of an utterance made before a meeting of WPA workers here last June by Aubrey Williams, Deputy WPA Administrator, whose recent designation by President Roosevelt to head the National Youth Administration is not subject to Senate confirmation.

Says He Gave Coercive Talk

Relating that Mr. Williams had told the relief workers that "we've got to keep our friends in power," the committee declared:

"Where a supervisory official addresses an audience of the employes under him or composed mainly of such employes, and urges a certain political line of action, he uses a form of coercion contrary to public policy and the spirit of our government."

The committee's report was signed by all five of its members, Senators Sheppard of Texas, chairman; O'Mahoney of Wyoming, Walsh of Massachusetts, Harrison of Mississippi and White of Maine, the last-named a Republican.

Although reporting political abuse of WPA workers in Kentucky, Tennessee and Pennsylvania, the committee said its evidence failed to sustain charges it had received of such wrongs in Maryland, Missouri, New York, Indiana, New Jersey and Ohio.

The investigators recommended, among sixteen suggestions for cleaning up elections, legislation that would do these things:

Prohibit any beneficiary of Federal relief funds or any one administering Federal relief laws from making contributions for any political purpose.

Prohibit any relief official from using his authority or influence to coerce the political action of any person or group.

Make it a felony, instead of a misdemeanor as at present, for any one to deprive another person of work relief because of his race, religion, political affiliations, or membership in a labor organization.

Forbid relief officials from furnishing lists of those on relief to a political candidate or agent.

Prohibit political contributions by

RISING ARMS BILL FACED IN EUROPE

This Year, Like Last, to Show Greater Outlay—French Spend 40% of Budget

£550,000,000 IN BRITAIN

Italy Uses About Half Billion Dollars—German Cost Is Secret, Russian Vague

The following dispatches from the five leading European capitals indicate the increases in arms expenditures during the past year and projected increases in 1939. Britain and France make their budgets public. Arms expenditures in Germany, Italy and Russia, where secrecy is maintained, must be estimated, unofficially.

Wireless to THE NEW YORK TIMES.

PARIS, Jan. 3.—France this year is facing an expenditure of almost 40,000,000,000 francs for defense as compared with an outlay of about 25,000,000,000 francs in 1938. An additional burden of 15,000,000,000 francs in World War obligations will be carried this year, as it was last year.

Hence it is figured that of this year's total budget, amounting to 66,000,000,000 francs, 30,000,000,000 covers war costs or preparations for war. This is about 40 per cent of the entire budget.

In addition, there is a special appropriation for fortifications, armaments and navy and aviation building programs amounting to 25,000,000,000 francs. This is to be met by national defense bonds and the national defense fund.

The following tables show how the French war expenditures projected for this year compare with those of 1938, all figures being given in francs:

Ordinary Budget

	1938	1938
Army	5,074,101,200	5,795,226,415
Navy	2,190,750,986	2,671,675,437
Aviation	1,556,157,191	2,319,887,829
Colonial defense	1,559,210,944	1,856,974,8[illegible]

Extra-Budgetary

Army	7,000,000,000	10,500,000,000
Navy	3,500,000,000	5,500,000,000
Aviation	3,500,000,000	8,500,000,000
Colonial defense		500,000,000

Wireless to THE NEW YORK TIMES.

LONDON, Jan. 3.—**Although the tremendous bill that the British taxpayer must pay for armaments during the current fiscal year is not yet fully made out, the general picture of an enormous increase can be obtained.**

For the fiscal year ending March 31, the defense estimates for the fighting forces were as follows: army, £114,419,000; navy, £127,336,019; air force, £102,720,000.

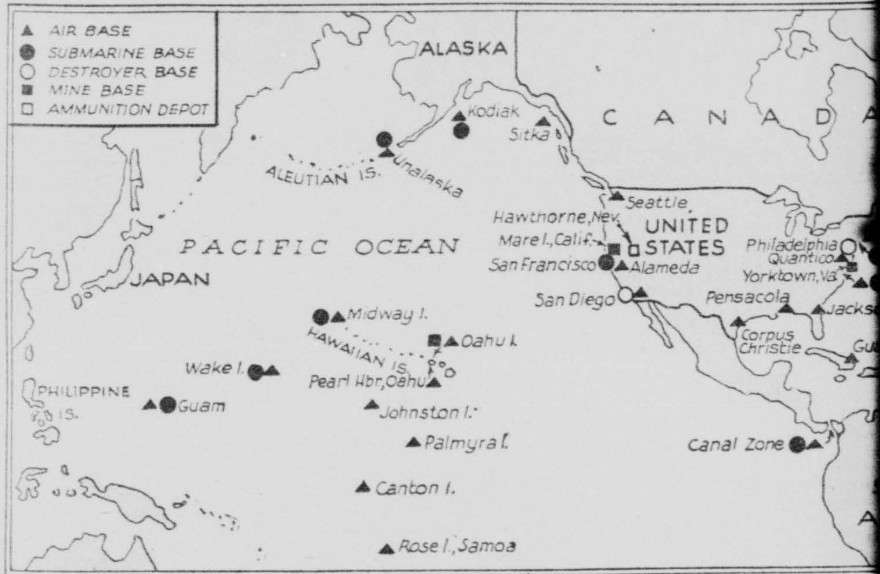
But these are only the figures originally estimated. Supplementary estimates have already raised the air force estimate to £125,621,000 and the navy estimate to £129,746,019. To both these figures and to the original estimate must be added further sums to make up the difference between the original estimate of last March and the amount that the three services actually spend during the current fiscal year. **An example of some of these sums may be found in the tentative estimate of about £1,000,000 as the cost of mobilizing the fleet during the Czech crisis.**

Future estimates are closely guarded. But a general idea may be obtained from the fact that Prime Minister Neville Chamberlain has admitted that the government has already dropped last February's estimate of £1,500,000,000 as the total of the whole rearmament cost. He has indicated that the air force estimates for the year beginning April 1, 1939, will reach £200,000,000. The total estimate for that year, therefore, is being estimated at over £550,000,000.

Wireless to THE NEW YORK TIMES.

ROME, Jan. 3.—The total that Italy spends annually for military purposes is largely a matter of conjecture. **Ever since the beginning of the Ethiopian war there has been a "special" budget, which is not published, in addition to the "ordinary" budget. In this "special" budget are included most of the armament expenses.**

According to the best unofficial estimates Italy's total outlay for the three military Ministries, including both ordinary and extraordinary expenses, in 1938 amounted to approximately $500,000,000. In 1939 it is expected to amount to $450,000,000. There has been a tendency toward decrease since 1936 when a maximum of $916,000,000 was spent.



The estimated ordinary expenditure for the fiscal year from July 1, 1938, to June 30, 1939, is $136,000,000 for the War Ministry, $102,000,000 for the navy and $67,000,000 for the air force. The corresponding estimates for the fiscal year 1939-40 are $178,000,000, $142,000,000 and $114,000,000.

It should be pointed out, however, that certain increases in the ordinary 1938-39 budget were authorized on Dec. 6. They brought the total estimates to $146,000,000 for the War Ministry, $190,000,000 for the navy and $74,000,000 for the air force.

No Budget in Germany

Wireless to THE NEW YORK TIMES.

BERLIN, Jan. 3.—Germany is almost the only country in the world without a national budget. The Annual Budget Law merely authorizes

St. Thomas, Virgin Islands.

San Diego, Calif. (Expansion of existing base.)

Alameda, Calif. (Now under construction. Expansion recommended.)

Unalaska, Aleutian Islands.

Canton Island, Pacific.

Rose Island, Pacific.

Extent of Defense Area

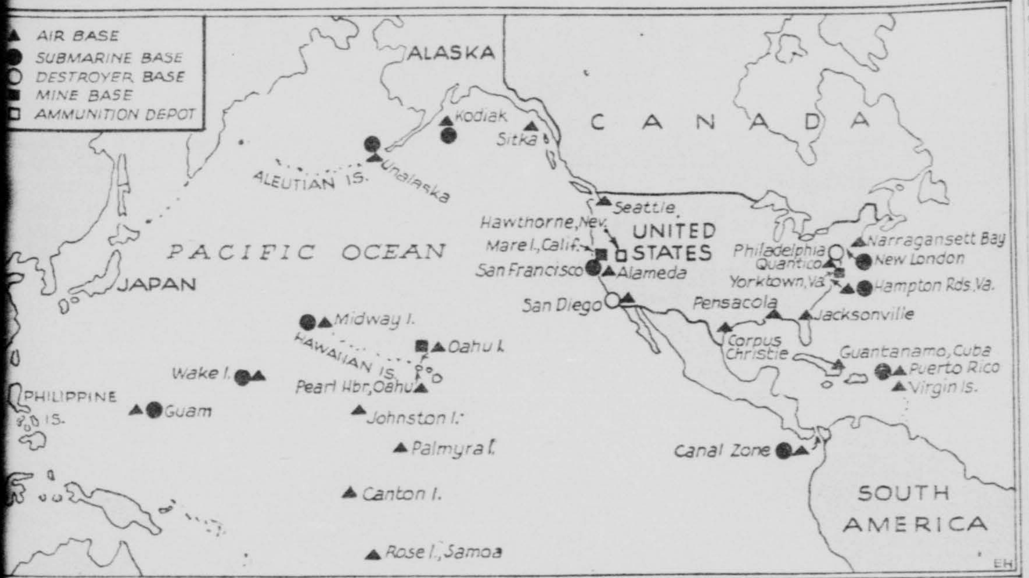
Construction of the first fifteen bases "because of their strategic importance" is deemed "necessary of accomplishment at the earliest practicable date, and without regard to the expansion contemplated by the act of May 17, 1938."

This act, the billion-dollar au-

are so changeable and so severe that the most careful consideration must be given to operating conditions, living conditions and maintenance problems. Consequently, in spite of their favorable strategic location, the board does not favor the Aleutian Islands as a site for the main Alaskan base."

MID-PACIFIC AREA

"The importance of a secure defense of the Hawaiian Islands need not be emphasized in this report. So long as the United States retains command of the sea between Hawaii and the mainland, the Island of Oahu may be considered practically impregnable against hostile occupation. It is only, however, as a secure base for naval operations that the islands possess a great strategic value, either in the defense of the mainland or defense of possessions to the westward. In time of emergency it will be necessary to throw into the theatre of operations large numbers of planes in excess of normal com-



this board within the limits of its precept.

"Pending settlement of those questions of broad political and military significance which must be considered in connection with Philippine independence, the board recommends maintenance of existing facilities only. Within this board's purview in connection with the defense of Guam lie certain possibilities which greatly simplify the military problem of the defense of the Philippines.

GUAM

"The island is well adapted for the maintenance of an air force equal to or superior to any hostile force that could be assembled within a 1,200-mile radius; the facilities for a submarine base are excellent.

"So long as Guam existed as a strong air and submarine base, hostile operations against the Philippines would be a precarious undertaking. To an even greater extent Guam would greatly impede, if not actually deny extensive hostile

Ever since the beginning of the Ethiopian war there has been a "special" budget, which is not published, in addition to the "ordinary" budget. In this "special" budget are included most of the armament expenses.

According to the best unofficial estimates Italy's total outlay for the three military Ministries, including both ordinary and extraordinary expenses, in 1938 amounted to approximately $500,000,000. In 1939 it is expected to amount to $450,000,000. There has been a tendency toward decrease since 1936 when a maximum of $916,000,000 was spent.

The estimated ordinary expenditure for the fiscal year from July 1, 1938, to June 30, 1939, is $136,000,000 for the War Ministry, $102,000,000 for the navy and $67,000,000 for the air force. The corresponding estimates for the fiscal year 1939-40 are $178,000,000, $142,000,000 and $114,-000,000.

It should be pointed out, however, that certain increases in the ordinary 1938-39 budget were authorized on Dec. 6. They brought the total estimates to $146,000,000 for the War Ministry, $190,000,000 for the navy and $74,000,000 for the air force.

No Budget in Germany

Wireless to THE NEW YORK TIMES.

BERLIN, Jan. 3.—Germany is almost the only country in the world without a national budget. The Annual Budget Law merely authorizes the Ministry of Finance to provide the sums called for by individual Ministries and other agencies.

It is, therefore, impossible to give any expenditures for the German Army and Navy in 1938 or even to make an intelligent guess at them and the same goes for 1939.

The total tax receipts of the Reich Government are estimated at more than 17,000,000,000 marks for the fiscal year from April 1, 1938, to March 30, 1939. To this must be added an 8,400,000,000 increase in the national debt for the first nine months of that period.

How much of these sums is being spent for the army and navy or for armaments generally is anybody's guess.

Soviet Figures Grouped

Special Cable to THE NEW YORK TIMES.

MOSCOW, Jan. 3.—Such statistics as are available on Soviet defense expenditures are so general that estimates are necessarily correspondingly general.

The 1938 budget allotted 17,000,-000,000 rubles to the army and navy out of a total budget of 115,000,000,-000 rubles. This total budget was increased at the Supreme Soviet session last July to 131,000,000,000 rubles, but nothing has been made public to indicate that the defense budget was increased.

The defense budget for 1937 was 17,000,000,000 rubles. As Soviet military expenditures have been steadily increasing during the past few years, it can be taken for granted that they will go up still further during the coming year, though no official information is available.

In stating military expenditures, Soviet statistics lump the army and navy together, without indicating how much goes to each. Furthermore, the funds allotted to the army and navy do not include expenditures by the separate Commissariat of Defense Industries—the branch of the State that produces munitions and builds ships. These expenditures must be heavy, especially in view of the big navy program on which the Soviet Union has embarked.

Another reason why Soviet statistics are not illuminating is that the ruble cannot be translated into dollars. The ruble is officially worth about 20 cents, but that value is purely a bookkeeping one, since the ruble's purchasing power is much less, averaging about 4 cents.

o changeable and so severe the most careful consideration t be given to operating condi- s, living conditions and main- ance problems. Consequently, spite of their favorable strategic tion, the board does not favor Aleutian Islands as a site for main Alaskan base."

MID-PACIFIC AREA

The importance of a secure de- e of the Hawaiian Islands need be emphasized in this report. long as the United States re- s command of the sea between waii and the mainland, the Is- d of Oahu may be considered ctically impregnable against hos- occupation. It is only, how- r, as a secure base for naval rations that the islands possess great strategic value, either in defense of the mainland or de- se of possessions to the west- rd. In time of emergency it will necessary to throw into the the- e of operations large numbers planes in excess of normal com- this board within the limits of its precept.

"Pending settlement of those questions of broad political and military significance which must be considered in connection with Philippine independence, the board recommends maintenance of existing facilities only. Within this board's purview in connection with the defense of Guam lie certain possibilities which greatly simplify the military problem of the defense of the Philippines.

GUAM

"The island is well adapted for the maintenance of an air force equal to or superior to any hostile force that could be assembled within a 1,200-mile radius; the facilities for a submarine base are excellent.

"So long as Guam existed as a strong air and submarine base, hostile operations against the Philippines would be a precarious undertaking. To an even greater extent Guam would greatly impede, if not actually deny extensive hostile

AND COMMERCIAL NOTICES

thorization bill, fixed the aircraft strength of the navy at not less than 3,000 planes.

"The location of a base of any sort in any specific port or harbor within the continental limits of the United States with a view only to the local defense of such locality, is not," says the board, "in accord with sound naval policy as applied to the conditions confronting the United States.

"The development of naval operations has brought it about that our area of naval coastal defense must extend from the continental limits to a line many hundreds of miles to seaward, and over any direction of hostile approach. The location of air bases within continental limits should be determined by the requirements of defense over broad regions rather than specific localities.

"It is not too much to say that if all the planes now authorized were in hand by the time action can be taken on this report, they could be operated only at a fraction of their potential value, and would suffer a large measure of deterioration or obsolescence before adequate shore facilities could be provided."

The navy, the report disclosed, has prepared a program that calls for an additional 1,000 planes, the increase to be accomplished at the rate of 200 a year over a period of five years.

Facilities at Bases

The report makes it clear that a base at Quonsett Point in Narragansett Bay is a vital link in the Atlantic chain. This base is held necessary to protect the great industrial region of which New York is the center. It would have facilities for two airplane carrier groups, two patrol plane squadrons and facilities for plane and engine overhaul.

The channel would have to be dredged to permit the berthing of the aircraft carriers Lexington, Saratoga, Yorktown, Ranger and Enterprise, and the Wasp, the last still in the construction stage. Quonsett Point would be the main northeastern base.

The Chesapeake Bay base would have facilities for two carrier groups, expandable to four, and four patrol squadrons, expandable to six. The Jacksonville base in the St. John's River at Camp Foster, five miles south of Jacksonville, would care for two carrier groups, expandable to four, and four patrol squadrons, expandable in an emergency to six. The bases at Corpus Christi, San Juan, Coco Solo and St. Thomas would be vital links in the Atlantic chain.

As to the Pacific bases, the report says in part:

ALASKAN AREA

"Naval air bases in the Alaskan area will be essential in time of war. Such bases are necessary links in the patrol of the Eastern Pacific and for the defense of Alaska and the Pacific. Alaskan air bases mu[illegible] be designed primarily to serve patrol planes. From a strategic point of view, the area of greatest importance is in the Aleutian chain of islands.

"In addition to the question of strategic value, however, there is a controlling feature of the Alaskan situation which governs the effectiveness of air operations and which determines the choice of location and characteristics of naval air bases in this region. This controlling feature is weather.

"The weather conditions of Alaska

plement.

"There is but one site in the Hawaiian Islands that possesses the requisite natural features for a major naval air base, namely, Ford Island, within the limits of the Pearl Harbor Naval Reservation. There are, however, two other locations in the islands suitable for developments as auxiliary bases, Kaneohe Bay, Island of Oahu, and Midway Island."

PEARL HARBOR

"Present base inadequate in its present condition to carry out its mission. Needs facilities for two carrier groups, ten patrol squadrons."

PHILIPPINE ISLANDS

"The defense of the Philippines involves matters of national policy which take precedence over the military problem involved. The military problem itself is one whose solution requires measures beyond any that could be recommended by

naval operations to the southward."

Guam should be developed into "a strong advance fleet base," the comment concludes.

As to submarine bases, the board recommended six for immediate construction. At San Juan, P. R.; Balboa, the Canal Zone; Unalaska, Canton Island; Rose Island and Guam.

The present base at New London would be expanded and other bases established at San Francisco, Kodiak and Hampton Roads.

A destroyer base for earliest completion is recommended for San Diego and another for later completion at Philadelphia. Mine bases are recommended for Mare Island, Calif.; Yorktown, Va., and Oahu, Hawaii, with an ammunition base at Hawthorne, Nev.

In addition to Admiral Hepburn the other members of the board, all of whom signed the report, are Rear Admiral E. J. Marquart, until recently commander of the Yangtse patrol; Captain Arthur L. Bristol and Captain Ralph Whitman.

LEHMAN DEMANDS ACTION TO PROTECT OUR CIVIC LIBERTY

URGES NEW LAWS

Tells Legislature a Wire-Tapping Ban and Other Statutes Are Needed

TO CONSULT REPUBLICANS

Governor, Delivering Message in Person, Gives New Policy —Little on 'Must' List

Governor Lehman's message to the Legislature, Pages 14, 15.

By WARREN MOSCOW

Special to THE NEW YORK TIMES.

ALBANY, Jan. 4.—Governor Lehman recommended to the Legislature today a long-range program designed to protect civil liberties by statutory enactments and also through the field of economic betterment. He coupled with this program a series of recommendations for the refinement and better administration of reform measures already on the books.

The tone of the Governor's address, delivered in person, was conciliatory, and he announced a new policy of continued conferences with the leaders of the Republican-controlled Legislature on the drafting as well as the pressing of legislation. Only three "program" bills, which used to conform to the Washington definition of "must" legislation, were prepared by the Gover-

New Zealand Government Bars Japanese Products

Special Cable to THE NEW YORK TIMES.

WELLINGTON, N. Z., Thursday, Jan. 5.—The first importers' licenses under the new government trade control struck a severe blow to business today. All Japanese trade appears to have been barred, possibly in retaliation for her not buying New Zealand wool.

Other imports were reduced 20 to 80 per cent. The government took trade totals for the first six months of 1938 as the basis for its calculations, which caused importers to protest that these figures were unusually low because they had reduced orders then after the 1937 boom.

There appears to have been no cut in the quota for automobiles from the United States. Other United States exports were cut as follows: Hardware, 66 per cent; metal goods, 79 per cent. Despite the promise that British trade would not suffer, some British products which are manufactured here are cut 50 per cent.

Financial Circles Fear New Restrictions—Ex-Ministers Believed in Danger

POST OFFERED TO KONOYE

Shanghai Expects Increased Effort by Japanese to End the War in China

By The Associated Press.

TOKYO, Jan. 4.—Baron Kiichiro Hiranuma, Fascist-inclined President of the Privy Council, was commanded tonight by Emperor Hirohito to form a new Cabinet to settle internal conflicts and mobilize Japan for "new policies" in China.

Baron Hiranuma is one of Japan's outstanding Nationalists. Prince Fumimaro Konoye, the retiring Premier, was thrust aside by a powerful movement, mostly behind the scenes, for an even more authoritarian government.

This movement represented elements within the army, inside and outside the government of the comparatively liberal Prince Konoye and within ultra-patriotic groups. Among its demands were more rigid control of economic life, new policies to consolidate conquests in China and the fusion of all political parties into a single Nationalist group.

Baron Hiranuma offered a portfolio to Prince Konoye "to strengthen the Cabinet" and the retiring Premier asked until Friday to consider the offer. Foreign Minister Hachiro Arita was invited to remain at his old post.

Political circles predicted that Admiral Mitsumasa Yonai, Navy Minister, and Lieut. Gen. Seishiro Itagaki, War Minister, would retain their positions.

Loyalists Claim to Hold Key to Northern Defenses—Refugee Trains Bombed

By WILLIAM P. CARNEY

Wireless to THE NEW YORK TIMES.

BALAGUER, Spain, Jan. 4—Generalissimo Francisco Franco's Fourth Navarre Division of picked shock troops, commanded by General Alonso Vega, has rushed the Republicans [Loyalists] off key points on the heights south of Castelldans, about eleven miles southeast of Lerida. It is claimed they relieved all immediate Republican pressure on General Franco's legionnaires northwest of Borjas Blancas.

Advanced detachments of Nationalists [Insurgents] are now reported inside the first houses on the outskirts of Borjas Blancas, the first major key to the Republican defense of Tarragona, thirty-five miles southeast on the coast.

The personal appearance of General Franco with his forces is credited with speeding up the offensive. Near Artesa de Segre the main weight of his Urgel and Maestrazgo Army Corps is now pouring across the Segre River and making the difficult crossing of the Urgel Canal, which is believed to be the main hope of the Republican defenses in this area.

Several narrow military bridges have been thrown across the canal, and Republican planes cannot get low enough to destroy them on account of the Nationalist's deadly anti-aircraft batteries, which have

Highlights of Message

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—Some of the points made by President Roosevelt in his message to Congress today were as follows:

FOREIGN AFFAIRS

A war which threatened to envelop the world in flames has been averted, but it has become increasingly clear that peace has not been assured. All about us rage undeclared wars, military and economic. All about us grow more deadly armaments, military and economic.

Storms from abroad directly challenge three institutions indispensable to Americans, now as always. The first is religion. It is the source of the other two, democracy and international good faith. Where freedom of religion has been attacked the attack has come from sources opposed to democracy. Where democracy has been overthrown, the spirit of free worship has disappeared. And where religion and democracy have vanished, good faith and reason in international affairs have given way to strident ambition and brute force.

The world has grown so small and weapons of attack so swift that no nation can be safe in its will to peace so long as any other single powerful nation refuses to settle its grievances at the council table. For if any government bristling with implements of war insists on policies of force, weapons of defense give the only safety. We have learned that survival cannot be guaranteed by arming after the attack begins, for there is new speed and range to offense.

DOMESTIC AFFAIRS

Even a nation well armed and well organized from a strictly military standpoint may meet defeat if it is unnerved by self-distrust, endangered by class prejudice, by dissension between capital and labor, by false economy and by other unsolved social problems at home.

Never have there been six years of such far-flung internal preparedness in our history without any dictator's power to command.

The nation looks to the Congress to improve the new machinery which we have permanently installed. The object is to put capital, private as well as public, to work.

If government activities are fully maintained there is a good prospect of our becoming an $80,000,000,000 country in a very short time. With such a national income, present tax laws

AIMS OF PRESIDENT

Arms, Plant Facilities and National Unity Urged in Message

NEUTRALITY ACT A TARGET

If Congress Slashes Spending It Will Be Responsible for Any Recession, He Says

Text of President's message will be found on Page 12.

By TURNER CATLEDGE
Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—In a message packed with warnings of dangers to democracy in a world harassed by the marching of dictators, President Roosevelt urged upon Congress today a three-point program of action designed to prepare America to meet threats to her institutions and discharge her responsibility of helping to protect the Western Hemisphere.

This triple-phased "adequate defense" which he proposed included armed forces and defenses strong enough to ward off sudden attack upon our shores. It involved, secondly, the immediate preparation of key facilities "to insure sustained resistance and ultimate victory." And finally—a point stressed most of all—it necessitated maintenance of a national unity which, he

nor's office to accompany his message and there will be few additions to the list.

Expressions of leaders on Capitol Hill today indicated that both the Governor and members of the Legislature will be taking advantage of the fact that there will be no legislative campaign until 1940, and no Gubernatorial campaign until 1942, to accomplish the work of the session with a minimum of political manoeuvring.

Wire-Tapping Ban Tops List

Heading the list of reforms designed to protect civil liberties by statutory enactment was one of the three program bills, an anti-wiretapping staute. It goes beyond the provisions of the recent Constitutional Convention, by barring the introduction in court of any evidence illegally obtained, and imposing a penalty up to $1,000 fine, or two years in jail, for any public officer willfully violating the act.

Tonight the Republicans had not made up their minds about this measure. It may embarrass them because they opposed a measure of that scope in the Constitutional Convention.

In the same field, the Governor asked also that any housing legislation enacted should contain provisions against racial discrimination.

He called also for extending the law which prohibits racial discrimination in employment by public utilities, to all businesses affected with the public interest and to all companies bidding on State contracts.

The Governor had stressed in his inaugural address on Monday the need for work toward economic betterment as part of his plan to make the democratic system unassailable. Today he included in that category the subjects of housing, health insurance, administrative law, mortgage moratorium, mortgage banks and other items.

Caution on Housing Urged

For housing, on which the Governor has prepared no bill yet, he recommended that the State make haste slowly, saying:

"The course of wisdom dictates some restraint so that we may adjust and readjust our plans, if necessary, in the light of accumulated experience."

In other words, the Governor does not favor immediate commitment by the State of all the $300,000,000 obligations that it is permitted to contract under the housing article of the new Constitution. He asked also that a new State agency, to supplant the present State Board of Housing, be created. He is believed to have in mind a paid administrator or board, responsible for approving project plans and determining whether they meet the conditions for State loans and subsidies.

The Governor devoted much of his 9,500-word address to emphasizing the gravity and complexity of the health insurance problem, and asked that it be studied further by

ducted by the State Labor Relations Board today to determine the collective bargaining agents for the 13,000 men of the various companies affected by the strike call.

Following the certification of collective bargaining agents by the board, they are to enter into negotiations with the respective companies. The results of the election are to be announced by the board tomorrow morning, after which the Transport Workers Union is to call off the strike

This plan of settlement was agreed upon yesterday by representatives of the T. W. U., the companies and various independent unions involved, at a conference called by Mayor La Guardia at City Hall yesterday morning. Attending the conference were also representatives of the city and the State Labor Relations Board.

Election in Armory

The election is to be held at the Seventy-first Regiment Armory, Thirty-fourth Street and Park Avenue. Voting wil begin at 3 P. M. Of the men entitled to participate, 11,000 are drivers and 2,000 are maintenance men.

Father John P. Boland, chairman of the State Labor Relations Board, announced last night that twenty-eight companies would be involved in the election. Of these, the employes of thirteen companies will vote yes or no on whether they desire to be represented by the Transport Workers Union. The employes of the fifteen other companies will vote for the T. W. U. or for an independent union formed within each of the companies and limited to the employes of each.

The election, it is hoped, will clear up the question long at issue in the taxi industry as to the actual strength of the Transport Workers Union and the extent of the movement for independent unions that has made itself felt in the industry in recent months.

Allied Men Not to Vote

Father Boland announced that the Allied System, Inc., one of the large independents in the taxi field, would not participate in today's election, although it has been included by the T. W. U. among the fleets affected by the strike call. An election of the Allied employes was held by the State Labor Relations Board on Dec. 27, when the Allied Employes Company, a so-called company union, was chosen as the collective bargaining agent. On protest of the T. W. U., certification was held up by the board pending a hearing to be held in about two weeks. The Allied employs about 1,000 men.

Father Boland requested that all taxicab drivers appearing to vote today bring with them their hack licenses bearing their pictures. Maintenance men were requested to bring along their social security cards as means of identification.

The Seventy-first Regiment Ar-

was intense, fear was expressed for the personal safety of some retiring ministers, especially Seihin Ikeda, the Finance Minister. He had angered extremists by blocking army demands for government control of corporation capital, dividends and investments.

The Emperor made the customary gesture of sending Kurahei Yuasa, Lord Keeper of the Privy Seal, to consult 89-year-old Prince Kimmochi Saionji, the last of the Elder Statesmen, before issuing the mandate to Baron Hiranuma.

For nearly a decade Prince Saionji, a Liberal, had been credited with blocking the Baron's aspirations for the premiership. But this time the militarist-nationalist pressure was greater and the Elder Statesman apparently gave his consent.

Baron Hiranuma was the head of Kokuhonsha [Foundations of the Country Society], a group of political action although not recognized as a political party. It was disbanded when the Baron became president of the Privy Council in March, 1936. That post is held to be above politics.

At its inception the society advocated support for the army, the

been rushed up to cover the passage of troops and guns. The Nationalists found two proper bridges intact across the canal.

The carnage at Artesa de Segre is declared to have been terrific. Republican troops, although surrounded, refused to surrender and fought until annihilated.

Trenches around the town were piled with dead. Three thousand Republican prisoners were reported taken in today's operations.

Artesa Again Claimed

HENDAYE, France (At the Spanish Frontier), Jan. 4 (AP).—The Spanish Insurgent command tonight officially announced the capture of Artesa de Segre, "gateway to Catalonia," sixty-five miles northwest of Barcelona.

The fall of the city was claimed in dispatches from Burgos, Insurgent military headquarters, twenty-four hours before but was flatly contradicted today by the Barcelona government command.

Insurgents did not reiterate the claim until tonight, when the official communiqué asserted the textile town had fallen before attacks of two Insurgent columns which crossed the Segre River on pontoons and waded through fields

Salvador Extends President's Term 6 Years; Nazis and Fascists Backed Propaganda

Special Cable to THE NEW YORK TIMES.

SAN SALVADOR, El Salvador, Jan. 4.—The Constitutional Congress now in session here has extended the term of President Maximiliano Hernandez Martinez for six years from March 1, when it would normally expire.

Special Cable to THE NEW YORK TIMES.

PANAMA, Republic of Panama, Jan. 4.—The extension of the term of General Maximiliano Hernandez Martinez as President of El Salvador is the third recent instance of its kind in Central America, and a fourth is now in process of enactment in Nicaragua for President Anastasio Somoza. Presidents Jorge Ubico of Guatemala and Tiburcio Carias Andino of Honduras have continued in power by the same method.

Supporters of General Martinez in El Salvador have used methods typical of Hitler and Mussolini. They maintained months of barrage extolling the virtures of General Martinez and the need of keeping him in power for the good of the country and the people. The campaign was carried out through the government-owned radio, the controlled press and motion pictures of well organized demonstrations. Expert assistance was given to his supporters by Fascists and Nazis, including Colonel Sergio Belice, an Italian arms agent.

The German Consul in San Salvador, Baron von Hundelhausen, is manager of the government-owned Farm Loan Bank. Another German, General Eberhardt Bonstedt, is director of the military schools and instructor of the army.

These key positions are of great economic and political influence. Naturally the situation does not discourage the introduction of totalitarian ideology. That fact is not permitted to be mentioned in the controlled press, which apparently is free to attack democracy, but not totalitarianism.

One newspaper editor is now exiled in New York as a result of publishing a forbidden editorial complimentary to France on Bastille Day.

One Salvadorean newspaper published the canard of German origin about President Roosevelt's cablegram of congratulation to Joseph Stalin, without question of its veracity. Another newspaper apologized merely because its caption on a picture of Chancellor Adolf Hitler, referring to his arrogant appearance, offended Baron von Hundelhausen.

The recent report of the declaration of martial law in El Salvador is incorrect, but a so-called state of siege has been in effect since General Martinez first rose to power. When the Constitutional Congress met, a number of prominent citizens requested that the state of siege be lifted during the adoption of a new Constitution. There immediately followed a flood of petitions to Congress to continue the state of siege and no action was taken.

General Martinez now joins Presidents Ubico and Carias among the "constitutional dictators."

ister's residence.

Few German Listeners

The German people had not been forewarned of the broadcast, a Berlin dispatch said, and apparently few listened. In Italy the speech could be heard by persons with powerful radios, but there was no indication as to how widely it had been picked up.

The Italian press, however, said the new Congressional session had opened in an atmosphere of "scandal" and accused United States officials of using relief money for political purposes.

The first Berlin press reaction to the address came in the Lokal-Anzeiger, which commented under the heading "In the Tracks of Wilson" that the address had been "what was expected."

Though there was general agreement on all of the President's observations about aggressors, both Britain and France gratefully noted these two passages:

"We have learned that when we deliberately try to legislate neutrality, our neutrality laws may operate unevenly and unfairly—may actually give aid to an aggressor and deny it to the victim," and "war is not the only means of commanding a decent respect for the opinions of mankind."

New Neutrality Act Expected

The first of these statements was accepted here as a prelude to a new modified Neutrality Act. The second was taken as a threat of economic sanctions against, first, Japan, then perhaps Insurgent Spain, and finally against any major aggressor in Europe.

Amendment or abolition of the United States Neutrality Act might run counter to the Anglo-French policy of non-intervention in the Spanish civil war. British officials, however, expressed the belief that such action might be of immense practical value to the democracies if a major war came.

The passages on the Neutrality Act and on "commanding a decent respect for the opinions of mankind" were among those rebroadcast by Britain in German and Italian.

Translators hastily transcribed the address into these languages, and as the President finished speaking German and Italian-speaking announcers immediately read 440 words selected from the President's message.

Also included in the broadcasts in German and Italian was what a British news agency termed the President's "ruthless assault on dictators."

Broadcasts in these languages were started during the Czecho-Slovak crisis as a means of getting British views to the German and Italian people. They were continued after the peace of Munich.

France "Approves All Points"

French ofifcials were more outspoken in favor of the President's address than the British. An official of the French Foreign Ministry said France "approves all points."

SEE QUIET SESSION IN DOMESTIC FIELD

Members of Congress Predict Little New Legislation—Spending 'Spree' Is Hit

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—Expres- sions of opinion that President Roosevelt would not ask for a great deal of new legislation in the do- mestic field and that his requests, when presented in specific terms, would not arouse as much contro- versy as formerly, came today from members of both parties in their comments on his message.

Although Mr. Roosevelt spoke of legislative needs in much more gen- eral terms than usual, men on both sides of both houses seemed pretty well agreed on the nature of his objectives. The general terms of the recommendations, however, led sev- eral members with special hobbies to see endorsements of their de- mands that might not be present in specific terms.

Republican criticism was directed chiefly at the President's recom- mendation for continuation of a government spending program to boost national income to $80,000,- 000,000 a year and to his alleged lack of a solution of the unemploy- ment problem. There was not much Democratic comment on the spend- ing theory.

From both sides came indications of belief that Congress is to be put more largely on its own.

"Spending Spree" Attacked

Senator Vandenberg, in sharp criticism of the continuance of spending, said:

"The Roosevelt of 1939 has now completely deserted the Roosevelt of 1933, when his first annual mes- sage bravely demanded national solvency as a basis for national re- covery and, as a result, got more recovery in ninety days than ever previously known in economic his- tory. Each annual message since then has continued to promise the prospect of a balanced budget while serially failing in its subsequent production. Now all pretense is abandoned.

"The President is frankly off on a spree w[illegible] the spenders. The bootstrap lifters have him. [illegible] Hop- kins [illegible]dn't say what they said he said, he should have said it."

Mr. Vandenberg predicted, how- ever, that if the President's pro- posed defense program was merely another spending device, he would not get it over.

Another Republican, Senator Townsend, attacked "continuance of this spending spree" and the use of armament needs as an excuse for it. Two Democrats, Senators

PRESIDENT BACKED ON DEFENSE VIEWS

Congress Leaders' Opinions Fail, However, to Give Trend on Neutrality Act

By CHARLES W. HURD

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—An un- exceptionable endorsement, which Democratic Congressional leaders gave today to President Roosevelt's general statement of foreign and defense policies in his message, wherein he linked them almost in- separably, did little to clarify the question as to what legislation might supersede important provi- sions of the current Neutrality Act, which expire next April.

Senator Pittman, chairman of the Foreign Relations Committee, alone among influential leaders endeav- ored to interpret the message, and he saw in it a decision by the gov- ernment to back up protests against invasions of American rights "with moral, commercial and financial sanctions."

"Do you think Congress will fol- low along on that policy?" he was asked, after he had outlined his views in some detail.

"I think they will," he said, "of course, short of war. But then, why shoot a man when you can starve him to death?"

Senator Pittman said he proposed to have his committee immediately begin considering all "responsible" plans for achieving that objective. There was no prepared measure in existence, he emphasized, but one should develop within a month by evolution through committee stu- dies.

To Work With House Group

Mr. Pittman said he proposed to have his committee cooperate fully with the Foreign Affairs Committee of the House on studies and legisla- tive proposals; but this program was necessarily one which could not be worked out today as the latter committee was without a chairman for the time being, through the illness of Representa- tive McReynolds.

Opposed to Senator Pittman's ideas, however, was an obviously large bloc of persons who could easily and conscientiously endorse the President's message, but who, on the basis of their records, would hesitate to give the authority neces- sary to take such instantaneous ac- tion as Senator Pittman suggested on his own responsibility.

The same factors and feelings which originally limited the Neu- trality Act to a scope which has made it ineffective, from the Pres- ident's viewpoint, still obtain, and

Continued on Page Thirteen

maintained, had been assured by the spreading of common opportu- nity through his economic policies of the last six years.

"Our nation's program of social and economic reform is a part of defense as basic as armaments themselves," he said.

The President intimated strongly that he would soon seek to free the Executive Department of the fet- ters of the Neutrality Act in direct- ing international affairs. Other points in his address were taken to mean that he might also be con- sidering use of economic sanctions to meet recurring threats to world peace.

The message, to be followed soon by one devoted specifically to the armed defenses, was delivered by the President in person to a joint session of the new Congress, which was host to himself and his Cabinet this afternoon in the House Cham- ber.

Thomsen in Diplomatic Gallery

The thousand visitors crowded into the galleries included the larg- est group of foreign diplomats at- tending such a ceremony in recent years. In a prominent place in the diplomatic gallery was Dr. Hans Thomsen, chargé d'affaires of Ger- many, who figured in the near break between Germany and the United States only a short time ago. Sumner Welles, Under-Secretary of State, who spoke for Secretary Hull in that famous interchange, repre- sented the Secretary of State on the House floor today.

Diplomats or no diplomats, the President lashed out at the dicta- torships which he regarded as con- stituting a threat to the very insti- tution of democracy. He called upon Congress to recognize the danger and prepare this country to meet the challenge now being flung down by the dictators to the ideas of faith and humanity—those foundation stones on which governments and civilization are based.

"We are off on a race to make de- mocracy work," he said with a tone and a manner that pumped into the microphones words carried by radio throughout the land and to the four corners of the earth.

So long as the President remained on the theme of defense of democ- racy his audience was with him to the man, as demonstrated repeat- edly by applause and later by the comments of members of the House and Senators in approval of his general remarks.

When he started to specify, how- ever, and especially to defend his lending-spending economic program on the basis of national defense, there developed lines of differences which finally were manifested by a good-natured exchange between him and the Republican side of the Chamber.

Insists on Continued Outlay

Further details of expenditures policy will be disclosed when the budget message is delivered to Con- gress tomorrow. As for today, the President practically defied Con- gress to curtail it, saying the leg- islative branch would have to take

GORMAN IS 'OUSTED' BY TEXTILE UNION

Executive Council Reaffirms Its Allegiance to C. I. O. in Repudiating President

HE IS ACCUSED OF DUALISM

His Support of Rhode Island Units Chartered by A. F. L. Is Alleged in Proceedings

Francis J. Gorman, who last month advised the 700 locals of the United Textile Workers of America to stop paying dues to the Textile Workers Organizing Committee of the Congress of Industrial Organizations and to vote on reaffiliation with the American Federation of Labor, was "ousted" yesterday from the presidency of the United Textile Workers by the union's executive council.

Mr. Gorman was accused of supporting "a dual and antagonistic organization, namely, the Providence and Woonasquatucket Woolen and Worsted Council, consisting of local unions chartered by the A. F. of L. in opposition to the U. T. W., which is affiliated with the C. I. O."

The ouster resolution declared that Mr. Gorman had forfeited his membership in the United Textile Workers by becoming a member of an A. F. of L. local in Rhode Island last November. He was also accused of attempting to usurp powers vested by the union's constitution in the executive council. This charge related to Mr. Gorman's effort to have four vice presidents expelled for opposing his move to lead the U. T. W. out of the C. I. O.

According to an announcement from the offices of the T. W. O. C., the decision to oust Mr. Gorman as president was made by fifteen members of the executive council of the U. T. W. The council has a total membership of twenty, including Mr. Gorman, who was notified that he would be placed on "trial" but did not appear at yesterday's meeting.

George Baldanzi, second vice president of the union, was designated to serve as president until a permanent successor to Mr. Gorman is named.

The affiliation of the U. T. W with the C. I. O. was reaffirmed by the executive council in the following resolution:

"Resolved, that the executive council reaffirms the position taken by the 1936 convention of the United Textile Workers of America in continuing its affiliation with the Committee for Industrial Organization (now the Congress of Industrial Organizations) and pledges its full and whole-hearted support to the Congress of Industrial Organizations. Further resolved that the executive council fully approves the splendid organizational activities of the Textile Workers Organizing Committee and hails the progress made in organizing the unorganized textile workers under the banner of the Textile Workers Organization Committee and the Congress of Industrial Organizations, reaffirms the agreement of March 9, 1937, between the Textile Workers of America and the Committee for Industrial Organization and pledges its continued and unqualified support to the work of the Textile Workers Organizing Committee."

Private Drivers' Union Meets Opposition; 700 Say Organizations Cannot Aid Them

An effort by the American Federation of Labor to organize private chauffeurs in this city is being combatted by a group of drivers that believes employers are so "fed up" with unions that they will put their cars in storage rather than bargain collectively in their own households.

The A. F. of L. union, which has received a charter as Local 800 of the International Brotherhood of Teamsters, was described last night by Michael J. Cashal, international vice president of the parent organization, as "a very, very conservative group without any radical ideas."

"It is about the most conservative group I have ever seen," said Mr. Cashal, most of whose experience has been gained in the unionization of truck drivers.

Wages and hours occupy no place in the immediate program of the private chauffeurs' union. The first concern of its leaders, according to Mr. Cashal, is to free chauffeurs from the necessity for spending off hours filling in for the butler, washing dishes or mowing the lawn.

"Chauffeurs put in a mighty busy day without any side duties," the union executive insisted. "They have to take their employer to the office early in the morning, then dash back to take the children to school, after which it is time to take the madam shopping. In the afternoon the children must be brought home and the employer has to be picked up. At night there is the theatre and a night club, so that the chauffeur is not through until 2 or 3 A. M."

The views of the group that is opposing unionization were summed up by one of its organizers at the Devonshire Garage, 207 West Seventy-sixth Street. He said 700 of the city's 5,500 chauffeurs had already signed a petition setting forth their conviction that neither the A. F. of L. nor the C. I. O. could improve their lot and that their interests would best be served by forming an independent organization without affiliation and without dues.

"We believe," this spokesman said, "that an outside union could not do anything for us and would just antagonize the boss. We think unionization would be practically impossible for our group in any case because we could not go out on strike. If we did, the employer would just put his car in cold storage and use a taxi until the strike was over, or he would put an out-of-State license plate on his car so his driver would not have to join the union."

Pressure is being exerted on chauffeurs hostile to the union by A. F. of L. garage workers who threaten not to service automobiles driven by non-union men, the union foe declared. Despite this pressure, all the six private chauffeurs' clubs in New York City are supporting the move for an independent body, he added.

MAY FREE MOONEY AT ONCE

California Governor Hints He Will Act Next Saturday

SACRAMENTO, Calif., Jan. 4 (AP).—Two hours after he walks into the Assembly chamber of the State Capitol Saturday morning, Tom Mooney may walk out a free man.

Governor Culbert L. Olson announced today he did not expect that the hearing would take more than two hours. If, as appears virtually certain, the Governor pardons Mooney at the conclusion of the hearing, the prisoner will not even have to return to San Quentin, where he has served twenty-two years following conviction for participating in the 1916 Preparedness Day bombing in San Francisco.

Asked at a press conference today whether he would take Mooney to the Governor's victory barbecue on Saturday afternoon, the Governor said:

"No, I'll leave it to you boys to take him."

MARTIN ATTACKS C. I. O.

Asks Aid in Overthrowing Foe of U. A. W. A. Autonomy

Special to THE NEW YORK TIMES.

DETROIT, Jan. 4.—Homer Martin today took his battle for control of the United Automobile Workers of America to the membership, in an appeal for aid in overthrowing a C. I. O. coordinating committee which he alleged was serving his opponents as a cloak for "factionalism."

He made public a letter he was sending to all local unions and international officers of the U. A. W. A., contending that the coordinating committee was destroying the autonomy of the union.

His action presages a showdown at the meeting on Feb. 6 of the U. A. W. A.'s international executive board, with Martin demanding full autonomy for the union and his full constitutional prerogatives, his allies indicated.

A majority of the executive board members have been hostile to Martin since September, when the C. I. O. negotiated a "peace" pact, signed by all board members except Irvan Carey of California. Although Martin signed the agreement, he did so in good faith and is justified in attacking it now because of its "wholesale violation," his allies contend.

HIS IMPERSONATOR HEARD BY COTILLO

Phonograph Record of Busch Strikers' Broadcast Played for the Justice

SUBMITTED BY COMPANY

Court Reserves Decision on Plea for Extension of Ban on All Picketing

Supreme Court Justice Salvatore A. Cotillo heard himself impersonated yesterday as a recorded transcription of a radio broadcast dramatizing the strikers' side of the Busch jewelry dispute was played in Supreme Court. A feature of the broadcast was the alleged suicide of a striker who had returned to work.

The broadcast was re-created for the benefit of the court as part of the Busch company's plea for the extension of an injunction granted last June by Justice Cotillo enjoining two C. I. O. unions representing employes from picketing in any manner. The injunction was recently affirmed by the Appellate Division.

As the transcription was played from an electrically operated phonograph near the bench Justice Cotillo checked it against the script for the broadcast that lay before him. He made only one comment on the evidence. This followed a statement by company counsel that incidental music for the program was the Communist Internationale. A union spokesman said it was part of Tchaikovsky's Fifth symphony and the court took part in dictating a statement on the music for the record.

Justice Cotillo said he would decide later whether the broadcast would be received in evidence. Its reception was opposed by counsel for the unions. He also reserved decision on the company's plea for the extension.

The views of the group that is opposing unionization were summed up by one of its organizers at the Devonshire Garage, 207 West Seventy-sixth Street. He said 700 of the city's 5,500 chauffeurs had already signed a petition setting forth their conviction that neither the A. F. of L. nor the C. I. O. could improve their lot and that their interests would best be served by forming an independent organization without affiliation and without dues.

"We believe," this spokesman said, "that an outside union could not do anything for us and would just antagonize the boss. We think unionization would be practically impossible for our group in any case because we could not go out on strike. If we did, the employer would just put his car in cold storage and use a taxi until the strike was over, or he would put an out-of-State license plate on his car so his driver would not have to join the union."

Pressure is being exerted on chauffeurs hostile to the union by A. F. of L. garage workers who threaten not to service automobiles driven by non-union men, the union foe declared. Despite this pressure, all the six private chauffeurs' clubs in New York City are supporting the move for an independent body, he added.

MARTIN ATTACKS C. I. O.

Asks Aid in Overthrowing Foe of U. A. W. A. Autonomy

Special to THE NEW YORK TIMES.

DETROIT, Jan. 4.—Homer Martin today took his battle for control of the United Automobile Workers of America to the membership, in an appeal for aid in overthrowing a C. I. O. coordinating committee which he alleged was serving his opponents as a cloak for "factionalism."

He made public a letter he was sending to all local unions and international officers of the U. A. W. A., contending that the coordinating committee was destroying the autonomy of the union.

His action presages a showdown at the meeting on Feb. 6 of the U. A. W. A.'s international executive board, with Martin demanding full autonomy for the union and his full constitutional prerogatives, his allies indicated.

A majority of the executive board members have been hostile to Martin since September, when the C. I. O. negotiated a "peace" pact, signed by all board members except Irvan Carey of California. Although Martin signed the agreement, he did so in good faith and is justified in attacking it now because of its "wholesale violation," his allies contend.

HIS IMPERSONATOR HEARD BY COTILLO

Phonograph Record of Busch Strikers' Broadcast Played for the Justice

SUBMITTED BY COMPANY

Court Reserves Decision on Plea for Extension of Ban on All Picketing

Supreme Court Justice Salvatore A. Cotillo heard himself impersonated yesterday as a recorded transcription of a radio broadcast dramatizing the strikers' side of the Busch jewelry dispute was played in Supreme Court. A feature of the broadcast was the alleged suicide of a striker who had returned to work.

The broadcast was re-created for the benefit of the court as part of the Busch company's plea for the extension of an injunction granted last June by Justice Cotillo enjoining two C. I. O. unions representing employes from picketing in any manner. The injunction was recently affirmed by the Appellate Division.

As the transcription was played from an electrically operated phonograph near the bench Justice Cotillo checked it against the script for the broadcast that lay before him. He made only one comment on the evidence. This followed a statement by company counsel that incidental music for the program was the Communist Internationale. A union spokesman said it was part of Tchaikovsky's Fifth symphony and the court took part in dictating a statement on the music for the record.

Justice Cotillo said he would decide later whether the broadcast would be received in evidence. Its reception was opposed by counsel for the unions. He also reserved decision on the company's plea for the extension.

Pending his decision he urged both sides to make further efforts to obtain an amicable settlement of the dispute. He suggested that a referee be appointed to reconcile existing conflicts between the management and employes and said that he would dvise the company to rehire pickets convicted of violating his injunction should a settlement be reached.

The opposing attorneys agreed to confer privately on the court's suggestion.

15,418 MORE IN JERSEY CLAIM JOB BENEFITS

5 Emergency Offices to Close as Number of Applications Drop

Special to THE NEW YORK TIMES.

TRENTON, Jan. 4.—Today, the second for filing unemployment compensation claims, 15,418 applications for weekly benefit payments were added to the 18,983 received yesterday at the eighteen emergency offices, including sixteen armories, and the thirty-five branch offices of the State Employment Service. It had been expected by the Unemployment Compensation Commission that 90,000 claims would be filed during the first two days.

Former Governor Harold G. Hoffman, executive director of the commission, said tonight that five of the armories would be closed and applications handled at the employment service offices in the areas affected. It had been planned to keep all of the armories open at least two weeks.

The Paterson and Mount Holly armories will not reopen tomorrow and Teaneck, Burlington and Somerville armories will be closed after tomorrow.

As was the case yesterday, the largest number of claims was filed today at Newark, where 2,964 were accepted. Jersey City ranked second, with 1,286, and Camden third, with 1,250. Two applicants appeared at Lakewood, but neither established a valid claim.

ADS PROTEST WPA LAY-OFF

Workers Dropped at Asbury Park Tell of Lost 'Dignity and Joy'

Special to THE NEW YORK TIMES.

ASBURY PARK, N. J., Jan. 4.—Local WPA workers affected by the recently announced Federal lay-off order organized here today and bought newspaper advertising space to advance their campaign for a concerted protest to President Roosevelt and members of Congress.

Headed by Lorenzo Harris, the group formed a protest committee and urged residents to send to the President and New Jersey members of Congress "10,000 letters of protest." The workers' advertisements in local newspapers charged the lay-off orders had "struck terror to the hearts and dashed the hopes of workers who had found dignity, joy and happiness in WPA projects."

TAXICAB WALKOUT TO END TOMORROW

Continued From Page One

mory will be divided into sections for the employes of each of the companies and they will vote by secret ballot.

Instructions for today's voting to members of the Transport Workers Union were given at a meeting held last night in the Royal Windsor Hall, Sixty-sixth Street and Columbus Avenue. About 3,000 men attended the meeting. Union officials stressed that the strike was to continue until official word is given by the union to return to work tomorrow. Picketing of the forty principal taxi garages in Manhattan and about twenty others in other boroughs is to continue throughout today.

Strike Was Gaining

The strike appeared to be growing in effectiveness as the City Hall conference assembled at 11 A. M. While the effectiveness of the walkout was uneven among the respective companies, a conservative estimate was that about half of the drivers had joined the walkout. However, because of the continued operation of some 5,000 cabs of individuals and operated by the owners not affected by the strike, there was no dearth of taxicabs. This was particularly true at railway and ferry terminals, hotels, clubs and theatres. Union officials claimed the strike was 90 per cent effective.

No instances of serious disorder were reported during the day. There were a score of scattered arrests for minor infractions and suspicion of mischief. Most of those arrested were released.

The effectiveness of the emergency measures taken by Police Commissioner Valentine as soon as the strike was declared made itself manifest in all boroughs and constituted a marked contrast to the disorders and the struggles that characterized the taxi strike of 1934. The impressive array of police of all services scattered throughout the city and concentrated particularly in the main centers precluded any danger of trouble. Strike leaders themselves stressed appeals to the men to refrain from disturbances.

Announcement by Mayor

Mayor La Guardia announced after the conference at City Hall that today's election would be under the direct supervision of John D. Moore, a member of the State Labor Relations Board. In announcing the agreement on the election the Mayor said:

"Mr. Moore is now ready to proceed. The employers and the representatives of the employes have agreed to an immediate election to determine the bargaining agency in accordance with the provisions of the State law. The State board is ready to provide the machinery for an election. All matters of procedure and all questions arising in the operation of the election are left entirely to the judgment of the State board.

"The representatives of the employes as well as the representatives of the employers have agreed to abide by the result of the election. That means that after the result is announced on Friday morning the men will return to work and negotiations will com- [illegible] by the men as their representatives."

The Mayor said it was also agreed that any award or decision will date from the time the men return to work.

Among those at the conference were Nathan L. Frankel, the Mayor's counsel on labor relations; Councilman Robert K. Straus, Manhattan Fusionist and sponsor of taxicab legislation; Arthur S. Meyer, member of the State Mediation Board; E. A. Danneman, president of the Parmelee System, largest fleet operator in the city; Henry Silverman, counsel for the company; N. M. Seymour, president of the Terminal System, another of the largest fleet operators; Harold Riegelman, its counsel, and N. W. Math, counsel for the Joint Board of Taxi Unions, comprising seven independent unions who will participate in today's election.

The Transport Workers Union was represented by Councilman Michael J. Quill, international president; Austin Hogan, president of the local unit; John Santo, international secretary; Eugene P. Connolly, director of the taxicab division; Harry Sacher, attorney for the union, and Warren G. Horie, chairman of the taxi strike committee.

City Hall Guarded

City Hall, the park and vicinity were under guard of seventy-five policemen as the union and employer representatives arrived for the conference. Another twenty-five policemen were held in reserve in various rooms of the building but out of sight.

From City Hall the representatives of the Transport Workers Union, the various independent unions and the employers went to the office of the State Labor Relations Board, where formal agreements for the election were signed.

The independent unions represented were the Joint Board of Taxicab Unions, the Greater New York Hackmen's and Taxi Drivers Union, the Metropolitan Taxi Workers Union, the Bell Transportation Union Committee and the Peerless Transportation Union Committee.

After the conference at City Hall Mr. Quill announced that the strike would continue until the final ballot to be cast in the election is counted. He emphasized that this was a "peaceful strike" and expressed the desire that all strikes be conducted in the "same American way of peace."

Later Mr. Quill made a tour of garages affected by the strike. He said he found most cabs, particularly those of the Parmelee, Terminal and Bell systems, tied up.

Charges Police Interference

Afterward Mr. Quill telephoned City Hall, complaining that the police at various points were "sabotaging strike activities" by interfering with pickets and "using the clubs." Mr. Quill charged also that union organizers were being picked up by the police without cause, taken to police stations and detained temporarily without charges.

The strike situation in Brooklyn was similar to that in Manhattan, being about 50 per cent effective with independent individually owned cabs very much in evidence and the number of fleet-operated cabs materially reduced. Both in Brooklyn and Manhattan, as in other boroughs, the police were on the alert against disorders last night. The Times Square, Pennsylvania Station and Grand Central Terminal areas were heavily guarded by [illegible] sticks.

Feverish preparations were under way on the part of the companies and of the Transport Workers Union for today's election. The T. W. U. was thought to have an advantage in that the several thousand strikers, not being at work, will be in a position to vote more freely than drivers and maintenance men not on strike. To overcome this advantage, it was learned, the companies were appealing to non-strikers to be sure to vote and promised to facilitate the appearance of all employes at the polls.

The National Transportation Company, operating part of the Parmelee System, mailed a notice to all its 4,000 employes urging them "to vote at this election in order that the collective bargaining agent elected may truly express the wishes of the employes in this very important matter."

The Transport Workers Union is demanding a renewal of the closed shop agreement, which expired last Saturday night, increases from the present 42½ per cent to 45 and 50 per cent in drivers' commissions, vacations with pay, a nine-hour day, stronger contract enforcement clauses and "elimination of racketeering" in the industry. Other demands include ending of "racial discrimination," seniority rights, all hiring to be done through a union hiring hall and improvement of sanitary and health conditions in garages.

CONGRESS DIVIDED ON THE MESSAGE

Most Democrats Praise It, but Republicans Say That It Encourages Spending

DIFFERENCES ON DEFENSE

President's Stand on Arming Stirs Wide Discussion—Labor Issue Comes to Fore

WASHINGTON, Jan. 4 (AP).—Congress divided sharply today in commenting on President Roosevelt's annual message.

Republicans who discussed the speech were critical. Many Democrats were liberal with their praise. A few members of the Democratic party who have differed with the Administration in the past took issue with portions of the message or commented reservedly.

Among the viewpoints expressed were these:

The Senate

BARKLEY, Democrat of Kentucky, the Majority Leader—It was one of the most comprehensive messages on the state of the Union that the President has delivered, and in my judgment it will receive the acclaim of the nation.

McNARY of Oregon, Republican Senate Leader—It was a revealing message. It sounded like a nominating speech for a third term.

SENATOR WHEELER, Democrat of Montana—It was a great speech. I think it will go down in history as one of the great state papers.

TOWNSEND, Republican of Delaware—I am opposed to the continuance of this spending spree. I am in favor of a reasonable amount of armaments expenditure, but not to be used as a smoke screen for avoiding domestic issues.

SCHWELLENBACH, Democrat of Washington—The most interesting thing about the message was the way in which the President put the Republicans and the conservative Democrats behind the eight ball on the question of cutting expenses.

BYRNES, Democrat of South Carolin—It was a splendid message and particularly in his discussion of world affairs.

HARRISON, Democrat of Mississippi—The President's criticism of dictatorship to me was the high point of his message.

CLARK, Democrat of Idaho—An excellent address as far as domestic matters were concerned. I am a little concerned about the implications of the foreign policy expressed in the message.

REED, Republican of Kansas—He made a charming political speech in which he used beautiful long-sounding phrases but he said nothing definite. Generally speaking it was what lawyers called "a plea of confession and avoidance."

TAFT, Republican of Ohio—The logical conclusion is another war

The President utterly failed to present any program of a constructive character calculated to restore public confidence in his leadership. The message was largely an appeal to the passions and fears of the people to justify a military program far in excess of the real needs of this nation.

COLLINS, Democrat of Mississippi—It was a splendid message and covered the field from both foreign and domestic standpoints. It admitted that we should have a well-armed defense army and navy.

NORTON, Democrat of New Jersey—Forceful, opportune and important.

WOODRUM, Democrat of Virginia—A fine, constructive speech.

SENATOR BRIDGES, Republican of New Hampshire, said that he agreed with the President that the foreign situation was serious, "but that shouldn't be used to prevent the amendment of the more vicious New Deal acts in this session of Congress."

TWO GET 10 TO 20 YEARS

Police Aspirant Caused Capture of Young Robbers

Two young gunmen, who committed a bold daylight hold-up in the office building at 2 East Thirty-fourth Street on Dec. 6 were sentenced yesterday in General Sessions by Judge Morris Koenig to ten to twenty years in Sing Sing as second offenders.

They were Josepn F. Donato, 21 years old, of 544 Brook Avenue, and Alexander Grenlick, 22, of 1,244 Clay Avenue, both in the Bronx. They had just held up the Household Finance Corporation for $185, when Sol Kass, 25, of 72 Tapscott Avenue, the Bronx, who aspires to be a policeman, happened to pass. He saw two girls leaning out of windows of the concern on the third floor, crying: "Robbers!"

A few seconds later two youths walked out of the building and jumped into a taxicab. Krass took the license number and speedily notified the police. A radio alarm brought about the arrest of Donato in the taxicab two blocks away and he implicated Grenlick. They pleaded guilty to the robbery last week, and admitted that, in 1936, they had been convicted of a hold-up in Queens and sentenced to the Elmira Reformatory.

DOOMED MAN'S PLEA FAILS

High Court Denies Alex's Third Move to Avoid Murder Penalty

Special to THE NEW YORK TIMES.

ALBANY, Jan. 4.—Michael Alex, 27, of New York who has gone on trial for first-degree murder six times and has three times been sentenced to die in the electric chair, only to have a higher court reverse the ruling, lost his battle for freedom in the Court of Appeals today.

The court unanimously affirmed Alex's third conviction, dooming him to die within the next two months unless Governor Lehman intervenes. Two previous convictions were set aside by the Court of Appeals.

Alex was convicted of slaying Jack Ehrlick, an insurance collector, during an attempted robbery

MURPHY PRESENTED TO SUPREME COURT

New Attorney General Is Also Admitted to Practice Before the High Tribunal

WELCOMED BY HUGHES

Commission, Read to Court, Expresses Roosevelt's 'Special Confidence' in Appointee

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—Frank Murphy, the new Attorney General, was presented to the Supreme Court in his official capacity today and was also admitted to practice before the high court.

As soon as the court met at noon, Robert H. Jackson, the Solicitor General, stood beside Attorney General Murphy at the pleader's bar. Unrolling a large parchment, Mr. Jackson presented Mr. Murphy's Presidential commission and referred to the wording in which President Roosevelt expressed "special confidence" in the new Cabinet officer.

During the same ceremony the Solicitor General moved Mr. Murphy's admission to the Supreme Court bar, where he will now represent the government in important issues. When the Solicitor General concluded his brief remarks, Chief Justice Hughes said to Mr. Murphy:

"Mr. Attorney General, we welcome you to participate in the increasingly important work of the administration of sound justice. We will receive your commission and you may now take the oath."

Mr. Murphy then advanced with Mr. Jackson to the left of the bench where Charles Elmore Cropley, the court clerk, administered the regular oath sworn to by all new members of the Supreme Court bar. Afterwards, the Attorney General went to the clerk's office where he paid the necessary $15 fee for admission, as do all other applicants.

Many officials of the Department of Justice were present as Mr. Murphy took the oath, including Joseph B. Keenan, assistant to the Attorney General; Brien McMahon, Carl McFarland and James W. Morris, Assistant Attorney General; Golden W. Bell, Assistant Solicitor General, and Gordon Dean, special executive assistant to the Attorney General.

KILLS SELF BY LEAP

New Yorker, Ill, a Suicide at Philadelphia Hotel

Special to THE NEW YORK TIMES.

PHILADELPHIA, Jan. 4.—John E. Rossell Jr., 47, a New York furniture salesman who formerly operated a wholesale furniture house in this city, leaped to his death from the fourteenth floor of the Benjamin Franklin Hotel today. His home was at 415 West Twenty-third Street, New York.

Mr. Rossell left a note addressed to "My only dear friend," Elliott Glenn, an insurance agent here, revealing his plans and asking that his body be cremated.

Mr. Rossell received a bayonet wound in action in France during the World War and cancer later developed in his left lung. He had been undergoing treatment in New York and talked with Mr. Glenn this morning about further treatment.

He checked in at the hotel a half hour before his leap. He left a widow, Mrs. Regina Rossell.

Severs Own Thumb Held in Car

CANTON, Pa. (AP).—Eighty-one-year-old Fred Watts cut off his own thumb the other day to free himself from his wrecked automobile. He feared the machine would catch fire after rolling down an embankment. Opening his hunting knife with his teeth, Watts whacked off his left thumb caught in a door and then walked five miles over snowy mountain roads to a doctor's office. Watts was going deer hunting when the accident occurred.

As soon as the court met at noon, Robert H. Jackson, the Solicitor General, stood beside Attorney General Murphy at the pleader's bar. Unrolling a large parchment, Mr. Jackson presented Mr. Murphy's Presidential commission and referred to the wording in which President Roosevelt expressed "special confidence" in the new Cabinet officer.

During the same ceremony the Solicitor General moved Mr. Murphy's admission to the Supreme Court bar, where he will now represent the government in important issues. When the Solicitor General concluded his brief remarks, Chief Justice Hughes said to Mr. Murphy:

"Mr. Attorney General, we welcome you to participate in the increasingly important work of the administration of sound justice. We will receive your commission and you may now take the oath."

Mr. Murphy then advanced with Mr. Jackson to the left of the bench where Charles Elmore Cropley, the court clerk, administered the regular oath sworn to by all new members of the Supreme Court bar. Afterwards, the Attorney General went to the clerk's office where he paid the necessary $15 fee for admission, as do all other applicants.

Many officials of the Department of Justice were present as Mr. Murphy took the oath, including Joseph B. Keenan, assistant to the Attorney General; Brien McMahon, Carl McFarland and James W. Morris, Assistant Attorney General; Golden W. Bell, Assistant Solicitor General, and Gordon Dean, special executive assistant to the Attorney General.

KILLS SELF BY LEAP

New Yorker, Ill, a Suicide at Philadelphia Hotel

Special to THE NEW YORK TIMES.

PHILADELPHIA, Jan. 4—John E. Rossell Jr., 47, a New York furniture salesman who formerly operated a wholesale furniture house in this city, leaped to his death from the fourteenth floor of the Benjamin Franklin Hotel today. His home was at 415 West Twenty-third Street, New York.

Mr. Rossell left a note addressed to "My only dear friend," Elliott Glenn, an insurance agent here, revealing his plans and asking that his body be cremated.

Mr. Rossell received a bayonet wound in action in France during the World War and cancer later developed in his left lung. He had been undergoing treatment in New York and talked with Mr. Glenn this morning about further treatment.

He checked in at the hotel a half hour before his leap. He left a widow, Mrs. Regina Rossell.

Severs Own Thumb Held in Car

CANTON, Pa. (AP).—Eighty-one-year-old Fred Watts cut off his own thumb the other day to free himself from his wrecked automobile. He feared the machine would catch fire after rolling down an embankment. Opening his hunting knife with his teeth, Watts whacked off his left thumb caught in a door and then walked five miles over snowy mountain roads to a doctor's office. Watts was going deer hunting when the accident occurred.

with American troops again sent across the ocean.

Foreign Affairs Views Upheld

PITTMAN, Democrat of Nevada—I am absolutely and entirely in accord with the President's statement on foreign affairs.

CAPPER, Republican of Kansas—I was not impressed by the alarm the President seemed to express as to the possibility of international disturbances. I don't think that we're in any great danger.

BARBOUR, Republican of New Jersey—The Democratic post-election attitude could not be disguised and the absence of "crackdowns" was very welcome. But most of all the admission that "the Congress alone has the power to do these things" shows how "mandates" change.

BROWN, Democrat of Michigan—The President goes unerringly to the vital problem of today—our international relations.

GURNEY, Republican of South Dakota—Very impressive presentation. Now that the ship of State is in uncharted waters, he asks Congress to take the helm.

WAGNER, Democrat of New York—It was a fine thing that every American should read.

PEPPER, Democrat of Florida—The message carries the greatest breath of world perspective of any since the messages of Woodrow Wilson.

CARRAWAY, Democrat of Arkansas (Only Woman Senator)—I can't speak for the other women of the country but the President's message is along the lines that I think are right.

Representatives

Speaker BANKHEAD—The message was very excellent in every aspect. It was moderate, fair and logical.

RAYBURN, Democrat of Texas, the majority leader—A masterful setting forth not only of the state of the union but of world affairs and trends. I think it is a message calculated to be very encouraging to the public in general.

MARTIN of Massachusetts, Republican leader—I was sorry that there wasn't something constructive offered in the message which would give hope to the 10,000,000 unemployed people.

SABATH, Democrat of Illinois—The greatest message ever delivered to Congress. A sound word of warning to the nation.

REED, Republican of New York—

in a New York city apartment building Dec. 18, 1937. Previously he had gone on trial five times for the slaying of Frank Pendlebury, a grocer in Queens, but two convictions were reversed and three trials ended in disagreements.

Shot by Crazed Relief Client

Special to THE NEW YORK TIMES.

RIDGEFIELD PARK, N. J., Jan. 4.—An unidentified assailant, believed to be a crazed relief client who had been hiding in the relief storage room at the municipal building here, shot Paul Arvidson, City Hall custodian, twice through the hand today and fled. Mr. Arvidson said the man was wildly shouting "cabbages, cabbages," while firing. The reference was believed to be to the cabbage which has been distributed through the Surplus Commodities Commission to relief applicants since Sept. 1. Although police have questioned several relief clients answering the description given by Mr. Arvidson, they have made no arrests.

Davey Fund Solicitor Convicted

MOUNT VERNON, Ohio, Jan. 4 (AP).—A jury convicted the State Highway Director, Ivan R. Ault, tonight on two counts of soliciting funds from civil service workers for Governor Davey's unsuccessful primary campaign. The maximum penalty for each count is a fine of $500 or six months in jail or both. Ault's attorney said he would seek a new trial. Workers testified they were asked to contribute 5 per cent of their wages to the Governor's campaign. Seventeen other Davey supporters are under indictment in Columbus on similar charges.

Mothers out of 5 Children's Colds

"I USE VAPORUB JUST AS MY MOTHER DID, IT HAS NEVER FAILED ME"

VICK HOMES—3 out of 5

For two generations Vicks VapoRub has been mothers' standby for relieving the discomfort of all the family's colds. Today it is used in more homes than *all other* medications of its kind put together.

CAN BE USED FREELY...VapoRub is an external treatment. There's no "dosing"—no risks of stomach upsets. You simply massage it on throat, chest, and back.

ACTS DIRECT...VapoRub goes right to work to bring relief, *two direct ways at once:* (1) It acts *direct* through the skin like a poultice; (2) Its medicated vapors, released by the warmth of the body, are inhaled *direct* to the irritated air-passages with every breath. This direct poultice-and-vapor action quickly loosens phlegm—clears the air-passages—checks tendency to cough—eases muscular soreness or tightness—relieves local congestion—brings comfort and invites restful sleep.

DOUBLY-PROVED...VapoRub has been *proved* in daily use by two generations of mothers—*further proved* in one of the largest series of clinical tests ever made on colds. Just treat one cold with VapoRub—see for yourself how effective it is—and we believe that you, like most mothers, will always keep it handy in your home.

VICKS VAPORUB

method of operation. It's a sensible method, too, because it promotes mutual understanding. And it is, of course, the only method by which such great savings are possible in Simon Ackerman Clothes, because nothing could induce us to disturb our forty-year-old reputation for quality.

Text of President Roosevelt's Message as Read by Hi

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—The following is the text of President Roosevelt's annual message to Congress:

To the Congress of the United States:

In reporting on the state of the nation, I have felt it necessary on previous occasions to advise the Congress of disturbance abroad and of the need of putting our own house in order in the face of storm signals from across the seas.

As this Seventy-sixth Congress opens there is need for further warning.

A war which threatened to envelop the world in flames has been averted; but it has become increasingly clear that peace is not assured.

All about us rage undeclared wars—military and economic. All all about us grow more deadly armaments—military and economic. All about us are threats of new aggression—military and economic.

Storms from abroad directly challenge three institutions indispensable to Americans, now as always. The first is religion. It is the source of the other two—democracy and international good faith.

Religion, by teaching man his relationship to God, gives the individual a sense of his own dignity and teaches him to respect himself by respecting his neighbors.

Democracy, the practice of self-government, is a covenant among free men to respect the rights and liberties of their fellows.

International good faith, a sister of democracy, springs from the will of civilized nations of men to respect the rights and liberties of other nations of men.

Three Complementary Issues

In a modern civilization, all three—religion, democracy and international good faith—complement each other.

Where freedom of religion has been attacked, the attack has come from sources opposed to democracy. Where democracy has been overthrown, the spirit of free worship has disappeared. And where religion and democracy have vanished, good faith and reason in international affairs have given way to strident ambition and brute force.

An ordering of society which relegates religion, democracy and good faith among nations to the background can find no place within it for the ideals of the Prince of Peace. The United States rejects such an ordering, and retains its ancient faith.

There comes a time in the affairs of men when they must prepare to defend not their homes alone but the tenets of faith and humanity on which their churches, their governments and their very civilization are founded. The defense of religion, of democracy and of good faith among nations is all the same fight. To save one we must now make up our minds to save all.

[illegible] what might happen to

Times Wide World

THE PRESIDENT ADDRESSING THE JOINT SESSION OF CONGRESS

Mr. Roosevelt delivering his message in the House of Representatives yesterday. In the back are Speaker William B. Bankhead, left, and Vice President John Nance Garner.

of armaments cease and that commerce be renewed.

But the world has grown so small and weapons of attack so swift that no nation can be safe in its will to peace so long as any other single powerful nation refuses to settle its grievances at the council table.

For if any government bristling with implements of war insists on policies of force, weapons of defense give the only safety.

In our foreign relations we have learned from the past what not to do. From new wars we have learned what we must do.

We have learned that effective timing of defense, and the distant points from which attacks may be launched are completely different from what they were twenty years ago.

We have learned that survival cannot be guaranteed by arming after the attack begins—for there is new range and speed to offense.

Preludes to Military Action

We have learned that long before any overt military act, aggression begins with preliminaries of propaganda, subsidized penetration, the loosening of ties of good will, the stirring of prejudice and the incitement to disunion.

We have learned that God-fearing democracies of the world [illegible]

ly—may actually give aid to an aggressor and deny it to the victim. The instinct of self-preservation should warn us that we ought not let that happen any more.

And we have learned something else—the old, old lesson that probability of attack is mightily decreased by the assurance of an ever-ready defense. Since 1931 world events of thunderous import have moved with lightning speed. During these eight years many of our people clung to the hope that the innate decency of mankind would protect the unprepared who showed their innate trust in mankind. Today we are all wiser—and sadder.

Three-Point Preparedness

Under modern conditions what we mean by "adequate defense"—a policy subscribed to by all—must be divided into three elements. First, we must have armed forces and defenses strong enough to ward off sudden attack against strategic positions and key facilities essential to insure sustained resistance and ultimate victory. Secondly, we must have the organiation and location of those key facilities so that they may be immediately utilized and rapidly expanded to meet all needs without danger of serious interruption by enemy attack.

In the course of a few days I shall send you a special message

front in its attack on a democracy, the attack must be met by a united democracy. Such a democracy can and must exist in the United States.

A dictatorship may command the full strength of a regimented nation. But the united strength of a democratic nation can be mustered only when its people, educated by modern standards to know what is going on and where they are going, have conviction that they are receiving as large a share of opportunity for development, as large a share of material success and of human dignity, as they have a right to receive.

Our nation's program of social and economic reform is therefore a part of defense as basic as armaments themselves.

Against the background of events in Europe, in Africa and in Asia during these recent years, the pattern of what we have accomplished since 1933 appears in even clearer focus.

For the first time we have moved upon deep-seated problems affecting our national strength and have forged national instruments adequate to meet them.

Achievements of Six Years

Consider what the seemingly piecemeal struggles of these six years add up to in terms of realistic national preparedness.

We are conserving and developing natural resources — land, water, power, forests [illegible]

nation than we were in 1929, or 1932.

Never have there been six years of such far-flung internal preparedness in our history. And all this has been done without any dictator's power to command, without conscription of labor or confiscation of capital, without concentration camps, and without a scratch on freedom of speech, freedom of the press or the rest of the Bill of Rights.

New Tools for a New Role

We see things now that we could not see along the way. The tools of government which we had in 1933 are outmoded. We have had to forge new tools for a new role of government in democracy—a role of new responsibility for new needs and increased responsibility for old needs, long neglected.

Some of these tools had to be roughly shaped and still need some machining down. Many of those who fought bitterly against the forging of these new tools welcome their use today. The American people, as a whole, have accepted them. The nation looks to the Congress to improve the new machinery which we have permanently installed, provided that in the process the social usefulness of the machinery is not destroyed or impaired.

All of us agree that we should simplify and improve laws if experience and operation clearly demonstrate the need. For instance, all of us want better provision for our older people under our social security legislation. For the medically needy we must provide better care.

Hint of Labor Law Changes

Most of us agree that for the sake of the employer and employe alike we must find ways to end factional labor strife and employer-employe disputes.

Most of us recognize that none of these tools can be put to maximum effectiveness unless the executive processes of government are revamped—reorganized, if you will—into more effective combination. And even after such reorganization it will take time to develop personnel and experience in order to use our new tools with a minimum of mistakes. The Congress, of course, needs no further information on this.

With this exception of legislation to provide greater government efficiency, and with the exception of legislation to ameliorate our railroad and other transportation problems, the past three Congresses have met in part or in whole the pressing needs of the new order of things.

We have now passed the period of internal conflict in the launching of our program of social reform. Our full energies may now be released to invigorate the processes of recovery in order to preserve our reforms, and to give every man and woman who wants to work a real job at a living wage.

"To Mke Democracy Work"

But time is of paramount importance. The deadline of danger from within and from without is not within our control. The hour-glass may be in the hands of other nations. Our own hour-glass tells us that we are off on a race

PRESIDENT'S WIFE AND MOTHER HEAR ADDRESS

Mrs. Franklin D. Roosevelt, holding Dianna Hopkins, daughter of the new Secretary of Commerce; Frederick Delano, uncle of the President, and Mrs. Sara Roosevelt listening to the President.

are spending more than we can afford. That is not so. Despite our Federal Government expenditures the entire debt of our national economic system, public and private together, is no larger today than it was in 1929, and the interest thereon is far less than it was in 1929.

The object is to put capital—private as well as public—to work.

We want to get enough capital and labor at work to give us a total turnover of business, a total national income, of at least $80,000,000,000 a year. At that figure we shall have a substantial reduction of unemployment, and the Federal revenues will be sufficient to balance the current level of cash expenditures on the basis of the existing tax structure. That figure can be attained, working within the framework of our traditional profit system.

The factors in attaining and maintaining that amount of national income are many and complicated.

They include more widespread understanding among business men of many changes which world conditions and technological improvements have brought to our economy over the last twenty years—changes in the interrelationship of price and volume and employment for instance—changes of the kind in which business men are now educating themselves through opportunities like the so-called "monopoly investigation."

truth that the welfare of labor itself depends on increased balanced output of goods.

To be immediately practical, while proceeding with a steady evolution in the solving of these and like problems, we must wisely use instrumentalities, like Federal investment, which are immediately available to us.

Here, as elsewhere, time is the deciding factor in our choice of remedies.

Would Hold Federal Investments

Therefore, it does not seem logical to me, at the moment we seek to increase production and consumption, for the Federal Government to consider a drastic curtailment of its own investments.

The whole subject of government investing and government income is one which may be approached in two different ways.

The first calls for the elimination of enough activities of government to bring the expenses of government immediately into balance with income of government. This school of thought maintains that because our national income this year is only sixty billion dollars, ours is only a sixty-billion-dollar country; that government must treat it as such; and that without the help of government, it may some day, somehow, happen to become an eighty-billion-dollar country.

If the Congress decides to accept this point of view, it will

takes the position that this nation ought not to be and need not be only a sixty-billion-dollar nation; that at this moment it has the men and the resources sufficient to make it at least an eighty-billion-dollar nation. This school of thought does not believe that it can become an eighty-billion-dollar nation in the near future if government cuts its operations by one-third. It is convinced that if we were to try it, we would invite disaster—that we would not long remain even a sixty-billion-dollar nation. There are many complicated factors with which we have to deal, but we have learned that it is unsafe to make abrupt reductions at any time in our net expenditure program.

By our common sense action of resuming government activities last Spring, we have reversed a recession and started the new rising tide of prosperity and national income which we are now just beginning to enjoy.

If government activities are fully maintained, there is a good prospect of our becoming an eighty-billion-dollar country in a very short time. With such a national income, present tax laws will yield enough each year to balance each year's expenses.

It is my conviction that down in their hearts the American public—industry, agriculture, finance—wants this Congress to do whatever needs to be done to raise our national income to eighty billion dollars a year.

Investing soundly must preclude spending wastefully. To guard against opportunist appropriations, I have on several occasions addressed the Congress on the importance of permanent, long-range planning. I hope, therefore, that following my recommendation of last year, a permanent agency will be set up and authorized to report on the urgency and desirability of the various types of government investment.

Investment for prosperity can be made in a democracy.

As Dictatorships Do It

I hear some people say "This is all so complicated. There are certain advantages in a dictatorship. It gets rid of labor trouble, of unemployment, of wasted motion and of having to do your own thinking."

My answer is "Yes, but it also gets rid of some other things which we Americans intend very definitely to keep—and we still intend to do our own thinking."

It will cost us taxes and the voluntary risk of capital to attain some of the practical advantages which other forms of government have acquired.

Dictatorship, however, involves costs which the American people will never pay: the cost of our spiritual values. The cost of the blessed right of being able to say what we please. The cost of freedom of religion. The cost of seeing our capital confiscated. The cost of being cast into a concentration camp. The cost of being afraid to walk down the street with the wrong neighbor. The cost of having our children brought up not as free and dignified human beings, but as pawns

[illegible] United States if the[illegible] of the new philosophies of force were to encompass the other continents and invade our own. We, no more than other nations, can afford to be surrounded by the enemies of our faith and our humanity. Fortunate it is, therefore, that in this Western Hemisphere we have, under a common ideal of democratic government, a rich diversity of resources and of peoples functioning together in mutual respect and peace.

A Pledge for Protection

That hemisphere, that peace and that ideal we propose to do our share in protecting against storms from any quarter. Our people and our resources are pledged to secure that protection. From that determination no American flinches.

This by no means implies that the American republics disassociate themselves from the nations of other continents—it does not mean the Americas against the rest of the world. We as one of the republics reiterate our willingness to help the cause of world peace. We stand on our historic offer to take counsel with all other nations of the world to the end that aggression among them be terminated, that the race [illegible] treaties and good faith in their dealings with other nations cannot safely be indifferent to international lawlessness anywhere. They cannot forever let pass, without effective protest, acts of aggression against sister nations—acts which automatically undermine all of us.

Obviously they must proceed along practical, peaceful lines. But the mere fact that we rightly decline to intervene with arms to prevent acts of aggression does not mean that we must act as if there were no aggression at all. Words may be futile, but war is not the only means of commanding a decent respect for the opinions of mankind. There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people.

Error of Neutrality Laws

At the very least, we can and should avoid any action, or any lack of action, which will encourage, assist or build up an aggressor. We have learned that when we deliberately try to legislate neutrality, our neutrality laws may operate unevenly and unfair- [illegible] making recommendations for those two essentials of defense against danger which we cannot safely assume will not come.

If these first two essentials are reasonably provided for, we must be able confidently to invoke the third element, the underlying strength of citizenship—the self-confidence, the ability, the imagination and the devotion that give the staying power to see things through.

A strong and united nation may be destroyed if it is unprepared against sudden attack. But even a nation well armed and well organized from a strictly military standpoint may, after a period of time, meet defeat if it is unnerved by self-distrust, endangered by class prejudice, by dissension between capital and labor, by false economy and by other social problems at home.

Call for a United Democracy

In meeting the troubles of the world we must meet them as one people—with a unity born of the fact that for generations those who have come to our shores, representing many kindreds and tongues, have been welded by common opportunity into a united patriotism. If another form of government can present a united [illegible]

We are trying to provide necessary food, shelter and medical care for the health of our population.

We are putting agriculture—our system of food and fiber supply—on a sounder basis.

We are strengthening the weakest spot in our system of industrial supply—its long smouldering labor difficulties.

We have cleaned up our credit system so that depositor and investor alike may more readily and willingly make their capital available for peace or war.

We are giving to our youth new opportunities for work and education.

We have sustained the morale of all the population by the dignified recognition of our obligations to the aged, the helpless and the needy.

Above all, we have made the American people conscious of their interrelationship and their interdependence. They sense a common destiny—and a common need of each other. Differences of occupation, geography, race and religion no longer obscure the nation's fundamental unity in thought and in action.

We have our difficulties, true—but we are a wiser and a tougher [illegible] to make democracy work, so that we may be efficient in peace and therefore secure in self-defense.

This time element forces us to still greater efforts to attain the full employment of our labor and our capital.

The first duty of our statesmanship today is to bring capital and man power together.

Dictatorships do this by main force. By using main force they apparently succeed at it—for the moment. However we abhor their methods, we are compelled to admit that they have obtained substantial utilization of all their material and human resources. Like it or not, they have solved, for a time at least, the problem of idle men and idle capital. Can we compete with them by boldly seeking methods of putting idle men and idle capital together and, at the same time, remain within our American way of life, within the Bill of Rights, and within the bounds of what is, from our point of view, civilization itself?

In Defense of Spending

We suffer from a great unemployment of capital. Many people have the idea that as a nation we are overburdened with debt and [illegible]

ROOSEVELT OFFERS DEFENSE PROGRAM

Continued From Page One

responsibility for any business recession that followed such a step.

He implied, too, that the reform crusade of the last few years had been completed and that henceforth recovery should be the main one of the three "R's" of the New Deal, hitherto listed as "Relief, Recovery and Reform." In his message he substituted "revision" for "reform," saying it was increasingly necessary, in the interest of national mobility, for Congress to make workable those laws which contributed to the unity and economic sufficiency of the people.

The goal for the renewed recovery drive was announced as a national income of $80,000,000,000, which, Mr. Roosevelt said, would have to be supplied in part through "government investing." The national income for this year is estimated at about $60,000,000,000.

"At that figure ($80,000,000,000) we shall have a substantial reduction of unemployment," he said, "and the Federal revenues will be sufficient to balance the current level of cash expenditures on the basis of the existing tax structure. The figure can be attained, working within the framework of our tarditional profit system."

He suggested, however, the revamping of the tax relationships between Feedral, State and local governments and consideration of "relatively small tax increases to adjust inequalities without interfering with the aggregate income of the American people."

All Themes Touch on Defense

Even in his discussion of the domestic situation, the idea of preparing for defense ran throughout. Congress was told that there were practical and peaceful ways in which a country could proceed to defend its interests and command for itself "a decent respect for the opinions of mankind."

"There are many methods short of war, but stronger and fore effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our people," he said.

These words were interpreted throughoue Washington as indicating the purpose of this government to attempt to apply economic sanctions against nations with which it may be at odds, or which may be threatening the peace of the world.

Later, and by more direct reference, the President indicated his desire to be rid of the fetters of the present neutrality law. When we deliberately try to legislate neutrality, he said, "laws may operate unevenly and unfairly—may actually give aid to an aggressor and deny it to a victim. The instinct of self-preservation should warn us that we ought not to let that happen any more."

As he said this some Senators who engineered the present neutrality law through Congress looked straight ahead without joining in the mild applause which greeted the remark.

The lesson as to the ineffectiveness, or possible reverse effect of neutrality laws, was one of the lessons learned of late, the President said. But he added that this country had learned something else, namely, "the old, old lesson that probability of attack is mightily decreased by the assurance of an ever ready defense." It was at this point that he disclosed his three-point plan of rearmament, revitalization of certain industries and vigorous prosecution of the economic policies which he had followed in recent months.

He let the matter of rearmament and resucitation of key facilities suffice with rather general reference, putting off full discussion until his supplemental defense message next week. At that time he is expected to recommend an additional authorization of $500,000,000 for aircraft for the army and navy, and possible arrangements for government aid to industries to help prepare themselves for the possibilities of war.

Six Years of Reforms Emphasized

Today he went quickly to the improvements which, he maintained, had taken place in the internal affairs of the United States and had made it more invulnerable to outside attack. He asked Congress to consider the accomplishments since 1933 against the background of events in Europe, in Africa and in Asia.

He mentioned the Administration's program for conservation of national resources, for extending food, shelter and medical care to the population; for rehabilitating agriculture; for attempting to end the long smouldering labor difficulties in industry and for extending security to the aged and helpless. Never, he said, had there been six years of such far-flung internal preparedness in the country's history.

"And all this has been done without any dictator's power to command, without conscription of labor or confiscation of capital, without concentration camps, and without a scratch on freedom of speech, freedom of the press or the rest of the Bill of Rights," he said.

He added that the public now looked to Congress to improve the new machinery which had been permanently installed to provide for the common good. Furthermore, he asked for authority to reorganize the administrative arm of the government, so that the tools now at its command would be put to maximum effectiveness.

"We have now passed the period of internal conflict in the launching of our program of social reform," he continued. "Our full energies may now be released to invigorate the processes of recovery in order to preserve our reforms, and to give every man and woman who wants to work a real job at a living wage."

Can We Compete, He Asks

In the drive for recovery, the time element called for greater effort to attain the fullest employment of labor and capital, he said. "The first duty of statesmanship today is to bring capital and man-power together," which was done in the dictatorships by main force.

"Like it or not they have solved, for a time at least, the problem of idle men and idle capital," he added. "Can we compete with them by boldly seeking methods of putting idle men and idle capital together and, at the same time, remain within our American way of life, within the Bill of Rights, and within the bounds of what is, from our point of view, civilization itself?"

It was in this connection that he announced his national income goal of 80,000,000,000. The factors for attaining and maintaining so much are many and complicated, he said, and included a widespread understanding among business men of changes which world conditions and technological improvements have brought in the last twenty years. They included too, the perfecting of the farm program; whole-hearted acceptance of new standards of honesty in the financial markets; reconcilement of enormous, antagonistic interests in the railroad and general transportation field; the working out of new techniques to protect the public interest and the development of a wider market for electric power.

"They include the perfecting of labor organizations and a universal, ungrudging attitude by employers toward the labor movement," the President continued, "until there is a minimum of interruption of production and employment because of disputes, and acceptance by labor of the truth that the welfare of labor itself depends on increased, balanced output of goods."

Laughs as Republicans Applaud

It was in discussion of the government spending program, which he labeled as "government investing," that the President had his tilt with the Republican side. He had begun to say that there were two ways to approach the subject.

"The first," he said, "calls for elimination of enough activities of government to bring the expenses of the government immediately into balance with income of government."

Here the Republicans broke in with wild applause. The President was forced to suspend for a moment. As the applause continued, stronger in volume, the President looked toward the source, threw back his head and laughed. His display of good nature brought silence, and he continued:

"This school of thought maintains that because our national income this year is only $60,000,000,000, ours is only a $60,000,000,000 country."

With this, the shouting of Democrats broke into the applause and the Republicans grinned. The President followed in a second with his practical dare to Congress to try to cut expenditures. If Congress decided to reduce the present functions of government, it would have to select those to curtail. He mentioned agricultural relief, veterans' pensions, flood control, highways, waterways and other public works, grants for social security and health, Civilian Conservation Corps activities, relief for the unemployed and the national defense among the activities which might have to be reduced.

As he detailed the list, Senators and members of the House began to laugh. Obviously they recognized the chops which go into the pork barrel.

Applause from both sides came a second later, however, [illegible] President said:

"The Congress alon[illegible] power to do all this, [illegible] appropriating branch of [illegible]ment."

The President said tha[illegible]monsense action of res[illegible]ernment activities last [illegible] had reversed a recession [illegible]ed the "new rising tid[illegible]perity and national inc[illegible] we are now just beginn[illegible]joy."

"It is my conviction th[illegible] their hearts, the Americ[illegible] industry, agriculture, [illegible] wants this Congress to do [illegible] needs to be done to rai[illegible]tional income to $80,000[illegible] year," he said.

THE DAY IN WASHINGTON

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—President Roosevelt read to a joint session of the Senate and the House of Representatives in the House Chamber his annual message on the State of the Union; sent to the House recommendations for specific items in the first deficiency bill, including $36,500,000 for the navy and presided at the regular meeting of the Cabinet.

The Senate held a brief session during which scores of bills were introduced, recessed to hear the President's message and adjourned at 1:45 P. M. until noon tomorrow.

The House received numerous bills, including proposals affecting the neutrality laws, un-American activities, the Social Security Act, anti-lynching and a general welfare pension bill and adjourned at 1:52 P. M. until noon tomorrow.

We are trying to provide necessary food, shelter and medical care for the health of our population.

We are putting agriculture—our system of food and fiber supply—on a sounder basis.

We are strengthening the weakest spot in our system of industrial supply—its long smouldering labor difficulties.

We have cleaned up our credit system so that depositor and investor alike may more readily and willingly make their capital available for peace or war.

We are giving to our youth new opportunities for work and education.

We have sustained the morale of all the population by the dignified recognition of our obilgations to the aged, the helpless and the needy.

Above all, we have made the American people conscious of their interrelationship and their interdependence. They sense a common destiny—and a common need of each other. Differences of occupation, geography, race and religion no longer obscure the nation's fundamental unity in thought and in action.

We have our difficulties, true—but we are a wiser and a tougher

to make ...mocracy work, so that we may b/ efficient in peace and therefore secure in self-defense.

This time element forces us to still greater efforts to attain the full employment of our labor and our capital.

The first duty of our statesmanship today is to bring capital and man power together.

Dictatorships do this by main force. By using main force they apparently succeed at it—for the moment. However we abhor their methods, we are compelled to admit that they have obtained substantial utilization of all their material and human resources. Like it or not, they have solved, for a time at least, the problem of idle men and idle capital. Can we compete with them by boldly seeking methods of putting idle men and idle capital together and, at the same time, remain within our American way of life, within the Bill of Rights, and within the bounds of what is, from our point of view, civilization itself?

In Defense of Spending

We suffer from a great unemployment of capital. Many people have the idea that as a nation we are overburdened with debt and

Perfecting of Farm Program

They include a perfecting of our farm program to protect farmers' income and consumers' purchasing power from alternate risks of crop gluts and crop shortages.

They include whole-hearted acceptance of new standards of honesty in our financial markets.

They include reconcilement of enormous, antagonistic interests—some of them long in litigation—in the railroad and general transportation field.

They include the working out of new techniques—private, State and Federal—to protect the public interest in and to develop wider markets for electric power.

They include a revamping of the tax relationships between Federal, State and local units of government, and consideration of relatively small tax increases to adjust the inequalities without interfering with the aggregate income of the American people.

They include the perfecting of labor organization and a universal ungruding attitude by employers toward the labor movement until there is a minimum of interruption of production and employment because of disputes and acceptance by labor of the

logically have to reduce the present functions or activities of government by one-third. The Congress will have to accept the responsibility for such reduction; and the Congress will have to determine which activities are to be reduced.

Certain expenditures we cannot possibly reduce, such as the interest on the public debt. A few million dollars saved here or there in the normal or in curtailed work of the old departments and commissions will make no great saving in the Federal budget. Therefore, the Congress would have to reduce drastically some of certain large items, such as aids to agriculture and soil conservation, veterans' pensions, flood control, highways, waterways and other public works, grants for social and health security, Civilian Conservation Corps activities, relief for the unemployed, or national defense.

The Congress alone has the power to do all this, as it is the appropriating branch of the government.

For an Eighty-Billion Nation

The other approach to the question of government spending

...ied human beings, but as pawns molded and enslaved by a machine.

If the avoidance of these costs means taxes on my income; if avoiding these costs means taxes on my estate at death, I would bear those taxes willingly as the price of my breathing and my children breathing the free air of a free country, as the price of a living and not a dead world.

A Lesson in Europe

Events abroad have made it increasingly celar to the American people that dangers within are less to be feared than dangers from without. If, therefore, a solution of this problem of idle men and idle capital is the price of preserving our liberty, no formless selfish fears can stand in our way.

Once I prophesied that this generation of Americans had a rendezvous wtih destiny. That prophecy comes true. To us much is given; more is expected.

This generation will "nobly save or meanly lose the last best hope of earth. * * * The way is plain, peaceful, generous, just—a way which if followed the world will forever applaud and God must forever bless."

He mentioned agricultural relief, veterans' pensions, flood control, highways, waterways and other public works, grants for social security and health, Civilian Conservation Corps activities, relief for the unemployed and the national defense among the activities which might have to be reduced.

As he detailed the list, Senators and members of the House began to laugh. Obviously they recognized the chops which go into the pork barrel.

Applause from both sides came a second later, however, when the President said:

"The Congress alone has the power to do all this, as it is the appropriating branch of the government."

The President said that the "commonsense action of resuming government activities last Spring," had reversed a recession and started the "new rising tide of prosperity and national income which we are now just beginning to enjoy."

"It is my conviction that down in their hearts, the American public—industry, agriculture, finance—wants this Congress to do whatever needs to be done to raise our national income to $80,000,000,000 a year," he said.

Bill Would Free Courts Of Department Control

By The Associated Press.

WASHINGTON, Jan. 4.—Senator Ashurst of Arizona asked Congress today to put all administrative duties of Federal courts in a separate division under the Chief Justice of the United States.

The chairman of the Judiciary committee offered a bill which would take away from the Department of Justice many of the financial and other controls which it now exercises over Federal courts.

For Suspending Immigration

WASHINGTON, Jan. 4 (AP).—Senator Reynolds of North Carolina said today that he was drafting a bill to suspend all immigration for ten years "or until every unemployed American is back to work." He added that he also was preparing measures to deport "every alien criminal" in America and to require compulsory registration and fingerprinting of aliens.

SEE QUIET SESSION IN DOMESTIC FIELD

Continued From Page One

Geray and Adams, also were cold to the idea, the former expressing regret that the President "apparently still believes you can spend your way back to recovery in spite of six years' experience and many millions still out of work." Several Republican House members took similar views.

The House Minority Leader, Mr. Martin, and the Minority Whip, Mr. Englebright, insisted on knowing what the President's plans were for helping the unemployed. Representative Wigglesworth held that the message offered no assurance of work through a helping hand to enterprise, and still another Republican, Representative Knutson, said the message would encourage only the munitions makers.

A freer hand for Congress and little additional New Deal experimentation was seen in the message by Mr. Vandenberg who applauded the President's "challenge to concentrated power" and his "assurance that New Deal innovations are at an end," a conclusion also reached from the message by Representative McCormack, Democrat.

Hold New Deal Gains Assured

Senator Bridges noted "a departure in that no threats were uttered." Representative Cox, a conservative Democrat, commented that "he showed more consideration for Congress as a coordinate branch," and Senator Schwartz predicted that "we are not going to enact much new legislation, but we are not going to sacrifice any of the New Deal gains either." Senator Pepper echoed this last idea and Senator Russell said it seemed to be the President's view.

The President's approval of improving New Deal machinery was seen by Senator Burke as an indorsement of changes in the Wagner Labor Relations Act; by Senator Downey as a peg on which to hang demands for larger old-age pensions, and by Representative May, a Democrat, as an indorsement of the encouragement of private industry. All are special aims of these legislators.

Senator Holt took exception to the assertion that there were few places where expenses could be cut without eliminating or curtailing essential services, and added that he saw plenty of potential savings "by cutting needless jobholders off the payroll."

Senator Schwellenbach said that in his expenditures statement "the President put the Republicans and the conservative Democrats behind the eight ball."

Both Senators Holt and Gerry thought the domestic phases of the message were "very general," but Senator Wheeler saw in them a request for a reorganization bill, new railroad legislation, and "perhaps" some revision of New Deal laws, but not surrender of reforms already achieved. Representative Gavagan, a Democrat, said that "domestically, the President hurled a challenge to big business to prove that the profit system can work in a democracy."

FRAUD SUSPECTS HEARD

Buckner and Partner to Go on Trial in U. S. Court Tomorrow

William P. Buckner Jr., broker, and William J. Gillespie, his partner in the promotion of Philippine Railway bonds, appeared yesterday before Federal Judge Murray Hulbert and pleaded not guilty to an indictment charging them with mail fraud.

Judge Hulbert continued Buckner in bail of $5,000 and Gillespie in bail of $2,000 and set tomorow as a tentativ edate for their trial. Meanwhile John C. Walsh, Assistant United States Attorney, is in Hollywood questioning motion picture actors and actresses who are supposed to have bought bonds on Buckner's rceommendation.

PRESIDENT'S STAND GUIDED BY EVENTS

It Ties to the Broad Diplomatic Base Laid Down in Recent Years of World Conflicts

NEUTRALITY ISSUE RAISED

Officials Hold Act Has Failed, Posing Question of Repeal by the Present Congress

By BERTRAM D. HULEN
Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—A broad diplomatic base exists for President Roosevelt's observations and recommendations on foreign affairs in his annual message to Congress.

His threat to employ economic retaliation, and condemnation of neutrality legislation coupled with a recommendation for its erasure from the statute books, are supported by a long record of events.

The record dates from the Japanese invasion of Manchuria in September, 1931. It includes the Italian invasion of Ethiopia, the Spanish civil war, the controversies with Germany over trade discriminations and persecution of religious and racial minorities, the Sino-Japanese warfare, and the drive to implant totalitarian ideologies in Latin America.

Should relations with Germany become more serious, the President could apply the retaliatory provisions of Section 338 of the Tariff Act of 1930 by imposing countervailing duties and embargoes, for the diplomatic record shows that Germany has practiced discrimination against American trade and investments.

Action on Japan Held Less Clear

It is not so clear, however, that the section could be employed against Japan because of her course in China, for it authorizes retaliation only against acts conducted within another country. According to officials, it does not cover acts committed within dominated territory abroad, such as the zones occupied by Japan in China.

This could be taken care of by a simple amendment enlarging Section 338 and it is considered possible that the Administration may in time request enlargement of its provisions to cover Japanese activities in discrimination against the United States on the mainland of Asia.

As for the neutrality statutes, it was considered clear from the President's address that he has denounced them as unworkable and has asked their repeal. Officials admit that it had already broken down before the President spoke. It was inconclusive in the Italo-

Glass 'Ignores' 81st Birthday Anniversary; Garner, Davis Among Many to Honor Him

Times Wide World

Carter Glass on the job in the Senate Office Building yesterday

By The Associated Press.

WASHINGTON, Jan. 4.—Senator Carter Glass of Virginia observed his eighty-first birthday anniversary today by ignoring it.

"Why make any fuss over it?" he said. "I'm not, and it's my birthday."

Asked how he felt, the Virginian replied:

"I feel like the devil."

"Why?"

"There are eighty-one reasons why."

His apartment was banked with flowers and appreciative tears were in his eyes, but he said:

"I won't talk about it. I'm ignoring it."

Two years ago the oldest member of the Senate said that it was his birthday wish to live to be 80. Today, at 81, his handclasp is firm. His clear eyes are searching. His voice is strong.

Mr. Glass revels in life. For good fun in sports he likes wrestling. During the last session of Congress he was a frequent ringside spectator.

Despite his occasional belligerence, the Senator is a mellow man. His friends know this well. Two of those friends, Vice President Garner and Norman Davis, chairman of the American Red Cross, visited him in his office today.

"Senator Glass used to be my boss when he was Secretary of the Treasury," Mr. Davis told newsmen. His first government job was a dollar-a-year man under Mr. Glass in the Treasury Department back in 1917.

FIRST SENATE BILLS ASK RELIEF CHANGE

Many Courses Are Suggested, but All Embody Switch From Control by the WPA

PEPPER PENSION PLAN IN

Would Increase Aid for Aged—Hatch Calls for Congress to 'Police' the Elections

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—Many possible courses which the Federal relief program might take were indicated in a batch of bills dropped into the Senate hopper today when the first opportunity came for introduction of Senate measures.

None of these bills was authoritative or official in the sense that they were introduced by leaders, and none bore the stamp of approval either of the White House or the small group of members who determine policy for the Senate. Probably none of them will ever reach the Senate floor for consideration, except as called up by their sponsors in attempts to insert them as amendments into officially sponsored bills.

Their importance lay in the trend they indicated, and the bills, whether introduced by Democrats or Republicans, were notable in their universal suggestion that administration of relief be switched from the highly centralized control of the Federal Government as manifested in the Works Progress Administration.

The special Senate committee designated to study relief and unemployment, named at the last session with Senator Byrnes as chairman, will study these measures, but withhold its recommendations until the White House officially or unofficially indicates the course that it wishes to take. Then a decision on a single major bill will be made, and it may easily include some of the proposals incorporated in the suggestions offered today. Following that action, the Senate must collaborate with the House.

Pepper's Bill Is No. 1

Senator Pepper, whose re-election in Florida was marked by an endorsement by James Roosevelt, won the honor of introducing "Bill No. 1," a proposal to enlarge and liberalize pensions for persons over sixty years of age, on a formula similar to the Townsend plan. It was not expected that "Bill No. 1" would win the approval necessary to make it a law.

Senator Hatch put before the Senate two companion measures which may easily become an integral part of the next relief law despite opposition at the last session, led by Senator Barkley, majority leader, which defeated simi-

Foreign Comments on

Following are press comments from abroad, as gathered by correspondents of THE NEW YORK TIMES, *on President Roosevelt's message to Congress:*

Great Britain

Change in Policy Cited

The Daily Telegraph (London).

"Much of the most significant part of the message was that dealing with the question of neutrality. Whereas three years ago America felt she could ignore aggressors, the President now asks her to recognize that that is not longer the case. Thanks to the experience gained in the interval the 'instinct of self-preservation' forbids her to take so optimistic a view of her own security.

"How far American opinion is yet ripe for such a volte face remains to be seen, but the mere fact that the President should have voiced it will scarcely be lost upon certain nations who may care to fit this particular shoe to their foot."

New Strength Is Seen

The Times (London).

This paper suggests that although the November election returns "cannot have failed to weaken his hold over his party in internal politics," his handling of foreign relations "has brought him new strength."

"In his description of American ideals and of American reaction to the world's troubles he was the authentic voice of the American people," says The Times, and it will be heard with full sympathy and understanding in all communities that share the political faith and practice of the United States and mean to preserve them.

"Guided by these ideals the strength of the republic, while it threatens no country's peace, can make a decisive contribution to the maintenance of international order and national freedom."

Practical Method Stressed

The News Chronical (London)

This paper finds that in urging the revision of the Neutrality Act President Roosevelt has "suggested a practical method by which the United States can maintain the ideals that the President holds dear—religion, democracy and international good faith."

The motive behind the act was to prevent the United States from becoming embroiled unnecessarily in war," writes The News Chronicle, "but in practice it has been found to confer great advantages on the aggressor; for the aggressor nation is generally able to do without American armaments better than its victim.

"This is the reason why the President without audible protest has refused to apply the act to the 'incident' between China and Japan. In its present form it is a boon to aggressors and it is greatly to be hoped that Congress will take the President's advice."

or encouragement to any nati
Europe that is an aggressor."

...00,000 ASKED

FIRST SENATE BILLS ASK RELIEF CHANGE

Many Courses Are Suggested, but All Embody Switch From Control by the WPA

PEPPER PENSION PLAN IN

Would Increase Aid for Aged—Hatch Calls for Congress to 'Police' the Elections

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—Many possible courses which the Federal relief program might take were indicated in a batch of bills dropped into the Senate hopper today when the first opportunity came for introduction of Senate measures.

None of these bills was authoritative or official in the sense that they were introduced by leaders, and none bore the stamp of approval either of the White House or the small group of members who determine policy for the Senate. Probably none of them will ever reach the Senate floor for consideration, except as called up by their sponsors in attempts to insert them as amendments into officially sponsored bills.

Their importance lay in the trend they indicated, and the bills, whether introduced by Democrats or Republicans, were notable in their universal suggestion that administration of relief be switched from the highly centralized control of the Federal Government as manifested in the Works Progress Administration.

The special Senate committee designated to study relief and unemployment, named at the last session with Senator Byrnes as chairman, will study these measures, but withhold its recommendations until the White House officially or unofficially indicates the course that it wishes to take. Then a decision on a single major bill will be made, and it may easily include some of the proposals incorporated in the suggestions offered today. Following that action, the Senate must collaborate with the House.

Pepper's Bill Is No. 1

Senator Pepper, whose re-election in Florida was marked by an endorsement by James Roosevelt, won the honor of introducing "Bill No. 1," a proposal to enlarge and liberalize pensions for persons over sixty years of age, on a formula similar to the Townsend plan. It was not expected that "Bill No. 1" would win the approval necessary to make it a law.

Senator Hatch put before the Senate two companion measures, which may easily become an integral part of the next relief law despite opposition at the last session, led by Senator Barkley, majority leader, which defeated simi-...

Foreign Comments on the Message

Following are press comments from abroad, as gathered by correspondents of THE NEW YORK TIMES, *on President Roosevelt's message to Congress:*

Great Britain

Change in Policy Cited

The Daily Telegraph (London).

"Much of the most significant part of the message was that dealing with the question of neutrality. Whereas three years ago America felt she could ignore aggressors, the President now asks her to recognize that that is not longer the case. Thanks to the experience gained in the interval the 'instinct of self-preservation' forbids her to take so optimistic a view of her own security.

"How far American opinion is yet ripe for such a volte face remains to be seen, but the mere fact that the President should have voiced it will scarcely be lost upon certain nations who may care to fit this particular shoe to their foot."

New Strength Is Seen

The Times (London).

This paper suggests that although the November election returns "cannot have failed to weaken his hold over his party in internal politics," his handling of foreign relations "has brought him new strength."

"In his description of American ideals and of American reaction to the world's troubles he was the authentic voice of the American people," says The Times, and it will be heard with full sympathy and understanding in all communities that share the political faith and practice of the United States and mean to preserve them.

"Guided by these ideals the strength of the republic, while it threatens no country's peace, can make a decisive contribution to the maintenance of international order and national freedom."

Practical Method Stressed

The News Chronical (London)

This paper finds that in urging the revision of the Neutrality Act President Roosevelt has "suggested a practical method by which the United States can maintain the ideals that the President holds dear—religion, democracy and international good faith."

The motive behind the act was to prevent the United States from becoming embroiled unnecessarily in war," writes The News Chronicle, "but in practice it has been found to confer great advantages on the aggressor; for the aggressor nation is generally able to do without American armaments better than its victim.

"This is the reason why the President without audible protest has refused to apply the act to the 'incident' between China and Japan. In its present form it is a boon to aggressors and it is greatly to be hoped that Congress will take the President's advice."

...or encouragement to any nation in Europe that is an aggressor."

Mention's "Superb Vigor"

Daily Herald (London)

The most enthusiastic comment of all comes from this Laborite paper, which finds in President Roosevelt's speech the "will to encourage every nation that needs encouragement, warn every nation that needs warning."

"With a superb vigor and with a passionate faith that puts to shame some of our tired and ailing Ministers Roosevelt proclaims the great principles of Liberal civilization," says The Daily Herald.

"There are times in history—this is one—when a pure proclamation of faith can inspire men; can, therefore, influence events.

"But the President does more than proclaim. The President acts. Money goes to China. Food goes to Spain. Part of the fleet goes to a permanent station in the Atlantic. The German protest against the Ickes speech is rejected. Now comes the outline of new action."

The President's passage on the Neutrality Act, in The Herald's opinion, shows "that he does not like 'neutrality' between right and wrong."

"Wisely does he add that to influence history it is not necessary to go to war," says The Herald. "That is the vital part of the Democrat's faith. These words and actions which go with them will influence history."

Germany

Arms Proposals "Transparent"

The Voelkischer Beobachter (Berlin).

This leading party organ reprints an editorial entitled "America in Attack," which appears in its provincial edition, with the substitution of a new final paragraph.

The armament plans of the United States, says this paper, "are reasonable only if all America is interpreted under the Monroe Doctrine as being 'an appendage of the United States,'" but "the South American States at Lima did not seem to feel that way about it."

"Propaganda" for this rearmament program, the editorial goes on, has for some time concerned itself with the argument that the United States is threatened with attack and that, in addition, the authoritarian States plan an invasion of South America.

"We have often emphasized that we are here concerned with an arbitrary assumption that does not find the slightest basis in fact," the Beobachter says, "and we furthermore refuse to believe the Washington Government is so shallow as to the reasons it advances for its armament plans. * * *

"Similar transparent tendencies like the President's armament proposals are contained in his closing sentences about internal policies of 'dictatorial' and 'democratic' systems of government. Franklin Roosevelt may tell his countrymen twice as many horror stories about the 'lack of freedom' of Central Eu-...

...few new viewpoints and Mr. Roosevelt contented himself with merely a repetition of the all too commonplace and inconsequental phrases that one could expect from the well-known spiritual poverty that is presumed for politicians in the United States.

"Mr. Roosevelt's message is meaningful only in that it clearly allows to be recognized that the United States Chief Executive himself has responsibility over the political-intriguing course of American publicity against authoritarian States and that he is quite openly determined to steer this course further in the future.

American circles speak about German-American relations becoming worse in increasing measure and say an official break in diplomatic relations is to be reckoned with. One must not overlook whether the United States Government really intends to take such a step. Mr. Roosevelt's proclamation, meanwhile, could almost be taken as provocation for such a break in relations."

"Protector of Jews"

Deutsche Allgemeine Zeitung (Berlin).

"To a certain extent it is difficult to analyze Roosevelt's grounds for attacking the authoritarian States. They lie in his dependence on Jewish circles; it appears that he wishes to go down in history with the title of protector of Jews. The second reason, as recently pointed out, is the growing opposition to him within his own party. The two together in the land of plutocratic democracy lead us to assume the third: Roosevelt appears, in opposition to American tradition, to be steering toward a third term.

"He wishes to play—as did his predecessor Wilson—the role of preserver of democracy. He certainly appears to have forgotten how Wilson ended politically, how the people of the United States let him fall and how the Democratic party did not arise again for one and a half decades because the American people did not wish any ideological adventures, but peace and well-being.

"We print a summary of the speech itself below," continues the paper, "but we beg our readers to reflect in contradistinction upon our Fuehrer's courageous, peaceful and thankful New Year's message."

Other Issues Ignored

The Berliner Tageblatt (Berlin)

This paper finds it particularly amazing that "in his Congressional message Roosevelt found no word for other problems designated as particularly urgent. The question of pensions, social security, demanded revision of the Wagner Labor Relations Act, the burning tax question, farms and other problems—all that is suspicious."

The Boersen Zeitung, which often speaks for the Foreign Office, does not even mention the fact that President Roosevelt made a speech today.

France

HOUSE BILLS BASED ON DIES TESTIMONY

One Would Allow Deportation of Alien Advocating Foreign Fealty

NEUTRALITY SHIFT SOUGHT

Repeal of Act of 1937 Is Again Proposed and Ludlum Offers a New Measure

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4. — Proposals to deal with activities such as those disclosed in testimony before the Dies Committee investigating un-American activities were among the bills, numbering more than 1,200, introduced in the House yesterday and today.

Representative Voorhis, Democrat of California, was the author of two such measures. One would authorize the deportation of an alien who advocates that any citizen of the United States or any alien permanently resident here owes fealty to a foreign government. Another would make it a felony, punishable by five years imprisonment or $10,000 fine or both, for any person to organize, participate in the organization of or join any civilian military organization, unless such an organization shall have obtained from the President a permit to function as a civilian military organization.

The President would be permitted to license such an organization subject to review by Congress which, in any event, could revoke a permit at any time.

Representative Fulmer, Democrat of Mississippi, introduced a bill making it a crime to advocate or promote the overthrow of the United States Government by force or violence.

Peace Measures Put In

Representative Maas, Republican of Minnesota, re-introduced his bill to "keep America out of war" by repealing the Neutrality Act of 1937. It contains a pledge to the world that the United States will never invade a foreign nation and will never acquire new territory for itself by the use of armed forces.

Representative Ludlow, Democrat of Indiana, introduced a new neutrality bill which would require the President, upon the outbreak of war between two nations or more, to forbid by proclamation exports of all kinds and all loans and credits to the belligerent nations. It would also forbid transportation of goods by American vessels in violation of the proclamation.

It would go even further than any present legislation by requiring the President to warn American citizens traveling on vessels of bel-...

Ethiopian War and it has worked unequally in Spain, where it has handicapped the Loyalists. It never has been applied in the Sino-Japanese warfare, and it would have broken down in Europe, according to officials, if a war had developed from the crisis of last September.

The act was to have been taken up at this session for revision in view of the expiration in May of the cash-and-carry provisions. The question now posed is whether it will be erased from the books entirely.

In that event, Loyalist Spain would be in a position to buy munitions freely in this country, as would also the Insurgents.

Foods to Both Sides in Spain

In the meantime, the United States is sending foodstuffs to civilians on both sides in Spain, but more heavily to Loyalist territory, for there is where the greatest privation is being experienced. However, officials emphatically reiterated today that this had no political implications, that the motive was exclusively humanitarian and that international policies would not be played with human misery.

The President spoke in the case of Japan after the period of note-writing had virtually ended with the United States communication of last Saturday rejecting the Japanese thesis of a "new order" in East Asia. If American rights continue to be flagrantly violated, it is assumed that the President will do more about it than write notes. Already he has extended credits to China through the Export-Import Bank for acquiring motor trucks, and he may find similar ways of encouraging China.

In the meantime he will consult with Nathan T. Johnson, the American Ambassador to China, who has been summoned here for a report and consultation and is due soon.

Furthermore, Joseph C. Grew, the American Ambassador to Japan, will return here in the Spring. He has not been summoned home, but is returning in accordance with plans he made last year to visit the United States in the Spring of 1939.

As for the hope expressed by the President for arms reduction and limitation, the State Department, through public statements, is already on record for such a move. At the same time it has admitted that no present prospect existed for a disarmament conference in view of the temper of the world and the feverish re-armament race.

Accord With Other Americas

In Latin America, where efforts to spread totalitarian ideas are causing concern, the United States has taken concerted measures with other American republics through the Pan-American Conference at Lima. It also has set up a division of cultural relations in the State Department to disseminate information and in general to encourage closer understanding in the Western Hemisphere through educational programs.

In the case of Germany, hopes for ...ore friendly relations have not ...en abandoned and efforts are ...ing made through the intergov...mental committee in London to ...e the refugee problem. The ...ted States has made known, ...ever, through her attitude to... the German protest against ...tary Ickes's Cleveland speech ...she will give as good as Ger...sends; that if attacks on the ...ent and other officials con... Germany, that country can ...attacks like those of Secre...es to continue here.

...ountry is continuing to in... Germany accord fair treat... American citizens in Ger... to American investments

GOES SPEECHLESS AS NEW NAVY FUND

First Regular Meeting Takes Only 18 Minutes, Without a Member Trying Real Talk

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4.—The Senate, which convened only for formal organization purposes yesterday, met in regular session for the first time today—and not a single member tried to make a speech.

Observers with long memories could not recall another instance when at least one member did not rise to make an observation on something.

As it was, a session scheduled to last for one hour was concluded in eighteen minutes, and Senator Barkley, majority leader, was enabled to ask for a recess over the time intervening between the ending of the regular Senate ssion at 12:18 P. M. and 12:40 when members gathered again informally to walk in a body to the House to hear President Roosevelt deliver his message at 1 P. M.

Senate business moved with the precision of a well-oiled clock.

Thomas Takes the Oath

Vice President Garner called the members to order at noon, prayer was said by the Rev. Ze Barney T. Phillips, and then Mr. Garner administered the oath of office to Senator Thomas of Oklahoma, re-elected member who aws unable to be present for the general administration of the oath yesterday.

This being the Senate's first "morning hour," the Vice President said that he could not call for "reports of committees," as there technically are no committees as yet. These will be officially designated later in the week, with old chairmen and members holding their usual places and new members receiving their assignments.

The second call by the chair was for "Memorials and Addresses." On that call Senator Johnson introduced a petition said to contain 100,000 names, asking for legislation on the "migrant problem," which particularly concerns California, and Senator Bridges put into the Record printed attacks on the new Cabinet members, Attorney General Murphy and Secretary Hopkins.

Eden Speech Put in the Record

Senator Pittman, chairman of the Foreign Relations Committee, also obtained unanimous consent to print in the Record the speech which Anthony Eden delivered in New York before the National Association of Manufacturers, a speech which Mr. Pittman characterized as "the ablest exposition of democracy I have ever read."

With "Memorials and Addresses" completed, Mr. Garner chuckled, banged his desk again with his gavel, and opened the floodgates of legislation by saying:

"And now, bills by members."

Fully half of the members of the Senate rose to their feet in a single movement and pages scurried among them collecting bills as individuals were recognized.

Some had only single bills; others had sheafs which filled both hands. All were introduced without comment and "referred to the appropriate committees."

With the last bill introduced, Senator Barkely arose, looked around to make certain that no one was on his feet with a manuscript in his hand, and then moved the recess.

President Tells House Added Sum Is Needed This Year for Ships and Ordnance

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 4. — The naval expansion program authorized last year will require an additional $36,500,000 before June 30, President Roosevelt told the House today in requesting that amount for hulls, machinery and ordnance to be included in the First Deficiency Bill, which will be considered soon by the House Appropriations Committee.

The item for the navy was one of thirteen submitted by the President to Congress, the aggregate in the bill being $50,340,998.96 for various governmental departments.

When the naval expansion program was being considered last year, navy officials told Congress that the $154,113,150 authorized for construction and ordnance during this fiscal year would fall short of providing enough funds to carry on the program. The sum now recommended by the President, therefore, was said by navy officials to be necessary to keep up the construction and armament program for the rest of this year.

A part of the $36,500,000 will be used to purchase two tankers from the Maritime Commission. The total cost for these two auxiliary vessels is expected to be about $7,000,000.

Other recommendations for appropriations to be included in the first Deficiency Bill were as follows:

Legislative establishment, House —$11,000, telephone and telegraph expenses.

General accounting office—$150,000 for additional expenses incident to the Emergency Relief Appropriation Act of 1938.

Export-Import Bank—$20,000 for general expenses due to increased business.

Federal Housing Administration—$5,000,000, of which $2,750,000 is to be taken from the mutual mortgage insurance fund and $2,250,000 from the Reconstruction Finance Corporation. The sum asked is to meet increased expenses of administration.

Postoffice Department—$30,000, for personal and property damage claims.

District of Columbia—$97,855.96, for general governmental expenses.

United States Employes Compensation Commission—$2,000,000, because of substantially increased numbers on the relief rolls to whom must be paid disability or death compensation.

Treasury Department—$3,604,000; for rebuilding Coast Guard stations and communication lines, $104,000; acquisition of site for building for Bureau of Census, $3,500,000.

Interior Department—$1,395,043, of which $1,000,000 is for irrigation systems on Indian reservations and $200,000 for the Alaska Railroad.

State Department—$192,500, of which $140,000 is for contingent expenses of the foreign service, and $42,500 for salaries for an increased number of foreign service clerks, and the balance for general expenses.

War Department—$191,000 to restore sections of Fort Michie and Fort Terry, New York, damaged by the hurricane of last September.

Mount Rushmore National Memorial Commission—$75,000 to continue work.

lar bills at that time.

One of the Hatch measures would forbid all Federal employes except elective official and policy-making ones to participate in political activity. The other would authorize a form of "policing" of primary and general elections by Congress and prohibit coercion of voters "by any person." Both proposals have gained wide popularity since their initial defeat.

Tax Protest by Vandenberg

Senator Vandenberg introduced a measure, as a minority protest against New Deal legislation, which would suspend increases in payroll taxes under the Social Security Act, but this bill has virtually no chance of adoption.

Senator King incorporated in a bill a suggestion that the Treasury disburse relief money to the States, on proof of need, under the supervision of a special joint committee of the Congress.

Many other measures are in prospect.

Meanwhile, considerable favorable comment continued to be made on the report by the Sheppard committee concerning the conduct of the WPA in the last election.

Senator George, victor over a "purge" effort in which President Roosevelt personally intervened by making a speech against the Senator in his native State of Georgia, predicted that "as a result of all these legislative proposals there will be some form of legislation to prevent the use of Federal funds directly or indirectly for political purposes."

Civil Service for 35,000 in WPA

By The Associated Press.

WASHINGTON, Jan. 4.—Colonel F. C. Harrington, WPA Administrator, announced today that 35,000 administrative employes of the agency would be placed under civil service on Feb. 1. The move, he explained, would involve all administrative personnel, in Washington and the field, with the exception of a "small number of policy-making positions."

He said that the step was mandatory under a Presidential order approved last June 24, and that he heartily endorsed it.

HONOR PRESS EXECUTIVE

60 Gather at Herald Tribune to Mark Hills's 50th Year

William G. Hills, credit manager of The New York Herald Tribune, was the guest of honor at a reception yesterday to celebrate the fiftieth anniversary of his association with the newspaper. The reception, held in the executive dining room of the Herald Tribune Building, 230 West Forty-first Street, was attended by about sixty persons, including staff executives and members of the Newspaper Credit Managers Association.

Robert Cresswell, treasurer of The New York Tribune, Inc., introduced the guest of honor and Ogden Reid, president of the corporation. Mr. Reid, after thanking Mr. Hills for his "willingness to serve so long" with the newspaper, presented him with a gold watch and chain.

Mr. Hills, who is 68 years old, plans to continue in active service with the organization.

Asks Legislators' Time Clocks

CONCORD, N. H., Jan. 4 (AP).—Representative George Duncan filed a resolution in the Legislature today calling for time clocks for members. Under his resolution they would punch the clocks when they arrived and left and be paid proportionately. The legislators receive $200 a year.

No Assurances Seen

The Daily Express (London)

Lord Beaverbrook's paper, which day after day preaches isolation to 2,500,000 readers, warns that "there is nothing in Roosevelt's message which need cause us to relax our own measures for rearmament."

"A strong United States exerting her immense moral economy and might on the side of peace is a reinforcement of every peaceful nation," says The Express. "But don't think that Roosevelt abandons isolation. He does not. He could not. And we, making ourselves strong by every effort, should also make ourselves secured by the resolve to have no truck with foreign quarrels.

"Our part in those conflicts should, like America's, be a moral one."

Similar Outlook of Nations

Daily Mail (London)

The Daily Mail also contends that President Roosevelt's words must not lead the British people "into easy reliance on their good neighbor."

"The outlook of the two nations is in many respects so similar," says The Daily Mail, that Britain is always alert, when Roosevelt speaks, for some hint of active co-operation in foreign policy. The President did no more than restate the United States attitude that, while America recognizes her 'responsibilities in a world of neighbors,' she has 'no political involvements in Europe.'

"His speech is a stimulus to this country to get on with the job of bringing Britain as close and as swiftly as possible toward the point of invulnerability. We can press on with that work assured that the United States will never lend aid

...ropean peoples.

PRESIDENT BACKED ON DEFENSE VIEWS

Continued From Page One

many observers believe that these very possibly are stronger than before. This estimate was confirmed privately in sources which are unquestionably sympathetic with the Administration.

There is no reason to believe that the large group of Senators and Representatives who opposed the granting of discretionary authority to President Roosevelt in the Neutrality Act would consent to that action now, especially since the new Congress is one that feels strongly that it must reassert the authority of Congress.

There is a lively opposition in Congress to granting any authority to the President which might eventually result in the United States being involved in an armed conflict, except in the case of actual invasion or directly threatened invasion involving countries of the Western Hemisphere.

Capper Doubts Need of "Alarm"

Many Senators and Representatives praised the manner in which the state of foreign affairs was pictured, but Senator Capper, a Republican who voices a large part of Middle Western thought, ventured the suggestion that he was "not impressed by the alarm he (the President) seemed to express as to the possibility of international disturbance."

While the Senate was in session, Senator Frazier introduced a constitutional amendment which ... prohibit participation by the U... States in "foreign wars."

There was evident comple... animity on the need for "n... defense," but those who fa... task of implementing this ph... the President's message mu... cide what constitutes de... whether it means simply def... the shores of the United Stat... possibly the Western Hemis... or permitting scope for ... which might be conducted ... sands of miles away as prev... measures.

No Assurances Seen

The Daily Express (London)

Lord Beaverbrook's paper, which day after day preaches isolation to 2,500,000 readers, warns that "there is nothing in Roosevelt's message which need cause us to relax our own measures for rearmament."

"A strong United States exerting her immense moral economy and might on the side of peace is a reinforcement of every peaceful nation," says The Express. "But don't think that Roosevelt abandons isolation. He does not. He could not. And we, making ourselves strong by every effort, should also make ourselves secured by the resolve to have no truck with foreign quarrels.

"Our part in those conflicts should, like America's, be a moral one."

Similar Outlook of Nations

Daily Mail (London)

The Daily Mail also contends that President Roosevelt's words must not lead the British people "into easy reliance on their good neighbor."

"The outlook of the two nations is in many respects so similar," says The Daily Mail, that Britain is always alert, when Roosevelt speaks, for some hint of active cooperation in foreign policy. The President did no more than restate the United States attitude that, while America recognizes her 'responsibilities in a world of neighbors,' she has 'no political involvements in Europe.'

"His speech is a stimulus to this country to get on with the job of bringing Britain as close and as swiftly as possible toward the point of invulnerability. We can press on with that work assured that the United States will never lend aid

ropean peoples.

"The truth is and remains that these people live in peace and quiet, have work and are enjoying a boom, while Mr. Roosevelt has not been able for the six years he has been President to deliver the country from unemployment and out of the claws of corrupt Jewish capitalism. History judges men by their deeds—not their words."

"Stands by Imperialistic Policies"

The Lokal-Anzeiger (Berlin)

"As far as the contents of Mr. Roosevelt's message are known from cables and wireless reports, it reveals what was awaited. Mr. Roosevelt changes neither the home nor the foreign political lines he adopted about a year ago.

"He stands by imperialistic policies as exhibited in the United States exertions at the Lima conference and by the internal political goal by which he strives to increase his political power with the help of Jews and those other elements in the United States who are either in close business connection with Jews or in their thinking are so reactionary and ignorant of Europe that one can take them in with the oldest of New York's catchwords.

"At ima the preservation of the demracies was set as the goal for a battle against totalitarian States, which Mr. Roosevelt now calls 'aggressive governments.' With senseless assertions about Germany's and Italy's alleged political and economic intentions to attack South America, it was attempted to form a league of these Pan-American nations, of which Washington wished to have military and New York financial direction."

"Responsibility" Now Placed

National Zeitung (Essen)

"Mr. Roosevelt's message offered

Typical headlines from this morning's newspapers follow: "Dictatorship Costs a Price American Will Never Pay, Says Roosevelt" (the Matin); "In Powerful Speech Roosevelt Asks Revision of Neutrality Law, Which in Its Present Form Favors Aggressors" (the Oeuvre); "Roosevelt Gives Grave Warning to the American People" (the Petit Parisien).

The Oeuvre (Paris).

An editorial by Genevieve Tabouis says:

"President Roosevelt's message had considerable effect in Paris and London. In London they regard it as one of the greatest international events in the past six months. It is now a critical moment for the dictatorships. This stand by the United States may have a decisive influence on their policy.

"In Paris and London three passages specially drew attention—that urging a union of the democracies, that urging an international conference and finally the President's condemnation of the Neutrality Act. In London they think the speech may alter considerably the terms of Prime Minister Chamberlain's talk with the Duce. The British Government has decided to devote a special sitting of the House of Commons to considering the Far East situation and maybe British policy will be revised to suit the United States."

Neutrality Act Stressed

The Petit Journal (Paris)

"It is not for nothing that President Roosevelt after noting the United States devotion to freedom of religion and devotion to democracy and international good faith proposes to revise the Neutrality Act."

ligerent nations that they would do so at their own risk. Recruiting on behalf of a belligerent nation, or activities in its behalf in this country, would be forbidden under heavy penalty.

Mr. Ludlow also was the author of a bill to repeal the undistributed profits tax which was continued by the 1938 revenue act in modified form, and re-enact it in practically the same form as it existed prior to the "compromise" last year.

Representative Curley, Democrat of New York, was one of three Representatives who advocated anti-lynching legislation. Mr. Ludlow introduced one bill, while the third was sponsored by Representative Guyer, Republican of Kansas.

Mr. Curley also introduced a measure to exempt editors, reporters and publishers from contempt of court proceedings for failure to reveal the source of any confidential information.

A resolution proposing a constitutional amendment permitting the Federal Government to tax income from State securities, and the States to levy taxes on income of Federal securities was introduced by Representative Dowell, Republican of Iowa.

Representative Burdick, Republican of North Dakota, proposed a pension of $30 a month to all Indians under supervision of the government after they reach 65 years of age.

A general welfare bill, proposing old-age pension of $30 to $60 monthly, financed by a 2 per cent gross income tax, was introduced by Representative Sheppard, Democrat of California.

PRESIDENT BACKED ON DEFENSE VIEWS

Continued From Page One

many observers believe that these very possibly are stronger than before. This estimate was confirmed privately in sources which are unquestionably sympathetic with the Administration.

There is no reason to believe that the large group of Senators and Representatives who opposed the granting of discretionary authority to President Roosevelt in the Neutrality Act would consent to that action now, especially since the new Congress is one that feels strongly that it must reassert the authority of Congress.

There is a lively opposition in Congress to granting any authority to the President which might eventually result in the United States being involved in an armed conflict, except in the case of actual invasion or directly threatened invasion involving countries of the Western Hemisphere.

Capper Doubts Need of "Alarm"

Many Senators and Representatives praised the manner in which the state of foreign affairs was pictured, but Senator Capper, a Republican who voices a large part of Middle Western thought, ventured the suggestion that he was "not impressed by the alarm he (the President) seemed to express as to the possibility of international disturbance."

While the Senate was in session, Senator Frazier introduced a constitutional amendment which would prohibit participation by the United States in "foreign wars."

There was evident complete unanimity on the need for "national defense," but those who face the task of implementing this phase of the President's message must decide what constitutes defense; whether it means simply defending the shores of the United States and possibly the Western Hemisphere, or permitting scope for actions which might be conducted thousands of miles away as preventive measures.

Senator Pittman's Comment

Senator Pittman said he thought that the President "meant that when you attempt to lay down by poor words a definite formula for the future, the imagination being unable to visualize the future, you frequently do more harm than good."

"The President very clearly stated," he added, "that we had the right, and it was our duty, to refrain from aiding those conquering dictators, and it was equally our duty in every way except through the use of armed force, to aid democracies in their fight against these dictators.

"It is evident to me, and undoubtedly to the President, that the so-called Neutrality Act has not and probably will not accomplish this purpose. In fact, in some cases, it may result in the contrary. If this conception is correct, then some action by Congress is essential.

"Many and various methods have been suggested to Congress, and these will be carefully considered, all of them."

Senator Pittman emphasized that in the case of encroachment on American rights, "heretofore we have left everything to protest."

"The question," he said, "is whether or not we shall limit ourselves to protests about wrongs against our government, or against our citizens, under treaties of peace with us, or whether we shall back up those protests with moral, financial and commercial sanctions. I think our government has decided the latter course is both proper and essential."

Peace Groups "Disappointed"

This interpretation of President Roosevelt's message, which seemed to express a fairly general viewpoint, resulted in issuance tonight of a joint statement by seven peace organizations here expressing regret at Mr. Roosevelt's declaration.

The statement of the peace groups said "heavy disappointment" was caused by the fact that the President "proposes, although with alarming vagueness, that we repeat the old policies of force that have led to the present tragic world situation."

"There can be only complete agreement with the President's assertion that religion and democracy must be preserved," the statement added, and asked, "but where is there evidence of new leadership based on recognition of the outstanding fact that neither religion nor democracy can be saved by war or a warlike crusade; that by war they can only be destroyed?"

The statement was issued over the names of the National Council for Prevention of War, the Women's International League for Peace and Freedom, World Peaceways, the Fellowship of Reconciliation, the Keep America Out of War Congress, the Youth Committee Against War and the Labor Anti-War Council.

ORDERS ACTION FOR LIBEL

Court Calls Philadelphia Record Editorial Also in Contempt

Special to The New York Times.

PHILADELPHIA, Jan. 4.—Prosecution of The Philadelphia Record for libel and contempt, on the basis of an editorial in this morning's issue, was ordered today by the State Supreme Court.

The editorial, entitled in early editions "The Judiciary Can't Pack the Legislature" and in later editions "The Judiciary vs. the Legislature," criticized the Supreme Court for issuing a writ to prevent the seating of Herbert S. Levin, a Philadelphia Democrat, by the State Senate. He was seated at a turbulent session of the Senate yesterday, and The Record congratulated Lieutenant Governor Thomas Kennedy, the presiding officer, for refusing to accept the court's writ.

When the full court assembled here this morning, Chief Justice John W. Kephart sent for District Attorney Charles F. Kelly of Philadelphia County and said The Record's editorial referred "to the appeal in the case of a man by the name of Levin."

"The record of that case is still in this court," Justice Kephart said. "The court considered this article extremely libelous. You are directed to prosecute and have a bill of indictment brought against the persons responsible for this article and prosecute that indictment as expeditiously as your affairs will permit. The article is not only libelous but is contemptuous in the extreme."

In an editorial to be published tomorrow under the title, "The Supreme Court vs. Freedom of the Press," The Record will defend its position and assert that, "if a court can punish an editor because the editor says the court is wrong, then we forfeit democracy." It concludes:

"If this be contempt of court, let the honorable justices make the most of it."

THIS PAGE IS DECLASSIFIED IAW EO 13526

Governor Lehman's Message to Legislature Calling

Special to THE NEW YORK TIMES.

ALBANY, Jan. 4.—Following is the text of Governor Lehman's annual message to the Legislature, delivered this afternoon:—

This day marks the beginning of my fourth term as Governor. It is the seventh regular session of your honorable bodies to which I have had the opportunity of presenting in person my recommendations of legislative problems. On all occasion I have recognized the independent prerogatives of the legislative branch of government. At no time have I sought to infringe upon the powers of the Legislature. It is in that spirit that I once again, today, submit my views and recommendations.

The commencement of this particular session of the Legislature has special significance. It is a truly historic moment. It is historic because for the first time in the annals of the State, the Chief Executive will be serving for a four-year term and the members of both houses of the Legislature for two years.

In my opinion, the shorter periods for State officials and for members of the Assembly were unsound. The longer terms will make for better State government. They will help, I am confident, to subordinate political considerations and they should induce greater cooperation between the Executive and the Legislature as well as between members of different political parties in the Legislature.

PROBLEMS OF ADMINISTRATION

This new four-year term of office of the Governor will permit establishment of longer-range policies. It will enable the Executive to concentrate more effectively upon administrative problems of government.

During my past three terms as Governor I recommended that the services extended to the people be expanded in many directions. New governmental functions had to be undertaken. A broad humane program of welfare and labor legislation was initiated. To the aged, the infirm, the mentally sick, the handicapped children, the unemployed were granted new services and financial assistsance. We have bestowed a certain degree of social security upon the underprivileged.

The removal of glaring social inequalities, the eradication of economic abuses, the provision of food, shelter and work for those who are unemployed, the securing of equal bargaining rights for labor and capital, the establishment of social security—these measures reflect our concetpion of the duty of government. By them, we have helped to furnish and safeguard democracy.

Proud of Sponsorship

They will go far in removing [illegible] and economic injuries

Times Wide World

NEW YORK'S GOVERNOR DELIVERS HIS MESSAGE

Mr. Lehman speaking before the Legislature at Albany yesterday

lice. Because of their pressing duties they frequently work unreasonably long hours. And at times the compelling demands which have been made on this comparatively small body of men have prevented them from receiving adequate vacations or time off. The situation can be remedied only by a reasonable increase in the size of the State police force, I therefore, recommend that the State police force be increased by 100 men.

It should be borne in mind that the purpose of such increase is not to enlarge the duties of the State police but to make possible to the officers and men of the force reasonable hours of work and the enjoyment of one day of rest in seven or its equivalent.

UNEMPLOYMENT RELIEF

The problem of unemployment relief remains the most important and difficult one that confronts government. Inasmuch as the financial resources and policies of the State so greatly affect the administration of unemployment relief, I shall discuss the subject and lay my views before your Honorable bodies in the Execu-[illegible]

more than at any time in modern history, it is important that we maintain inviolate religious and civil liberties.

The battle to wrest from the sovereign proper respect for individual liberties was long and bitter. Democracy sprang up only after centuries of persistent and courageous struggle. We are fortunate to enjoy the fruits of democracy in America. But we must always combat any attempts to weaken or corrode the basic tenets of democratic government. We must be ever vigilant to apply to new situations, created by modern conditions, principles that were long ago emblazoned in the Bill of Rights of the Constitution of the United States.

GRADE CROSSINGS

The people have amended the Constitution so as to reduce substantially the share to be paid by private railroads for the elimination of grade crossings. Previously, it was 50 per cent. The railroads now will be required to pay only the amount of the benefit derived, but in no event more than 15 per cent. Also from now

little or no medical care in the event of serious illness.

The result has been:

1. A rapid expansion of governmental health and medical care services.
2. A large increase in the number of voluntary health insurance organizations. These aim to supply medical service at reduced cost by charging fixed periodic payments for yearly service on a non-profit basis.

In New York we have made special legislative provision for the conduct of such organizations under State supervision. Seven cities of the State have adopted such plans. The New York City plan covers 395,000 people. It is contended that even these voluntary non-profit insurance plans are beyond the reach of our low-income groups.

3. A growing demand for a compulsory health insurance plan administered by government on a basis similar to unemployment insurance. This would apply only to wage-earners in the fixed-income levels. Such plans, differing widely in detail, have been in existence in most European countries for several decades.

There is wide disagreement as to which of these methods, either separately or in combination, would best solve present problems. Some groups think that all medical care should be tax supported. Others believe in tax-supported car for the indigent, plus voluntary health insurance for the higher income groups. Still others prefer compulsory insurance.

The new Constitution gives your honorable bodies the power to provide for protection, by insurance or otherwise, against the hazards of sickness. It is inadvisable for the State immediately to launch upon a program which will involve very large expenditures without first making a thorough study of all aspects of the problem. I recommend, therefore, that the Legislature have a commission which will include as members not only legislators but several public health experts and several representatives of the medical profession. I believe it is our duty to recognize the great interest that medical profession has in this entire subject.

HOME RULE

The new Constitution has extended the principle of home rule for local units of government. It modifies the system of home rule heretofore existing for cities and counties. It grants for the first time in the history of the State home rule powers to villages having a population of more than five thousand.

These changes in the Constitution will require new laws. I am sure that the standing committees of your honorable bodies will devote themselves to a careful revision of the statutory law. The principle of home rule is sound. I believe that the Legislature should do all within its power to make home rule really effective. The Legislature should exercise great care to avoid imposing restrictions upon local government and to avoid foisting mandatory expenditures upon them.

TRANSPORTATION, HEALTH

greatest blessing that can be conferred by a democracy upon its citizens. I recommend to your honorable bodies legislative action that will give real significance to the declared principle.

Among other suggestions, I urge that any legislation for low-rent housing require that the benefits of a project shall not be denied any person on the ground of race, color or creed.

As you know, the Labor Law now forbids any public utility from discrimination in employment on the ground of race, color or creed. A similar provision is contained in the Education Law with respect to employment in the educational system of the State. The principle of those laws is a most salutary one. I recommend to your honorable bodies that the principle be extended to all persons or corporations engaged in any business affected with a public interest and any business where public patronage is solicited. By so doing you will preserve and strengthen the basic structure of American democracy.

FAILURES OF CONSTITUTIONAL CONVENTION

The Constitutional Convention adopted some worthwhile proposals, and these were approved by the people. On the other hand, the convention adopted definitely unsound measures, such as the judiciary article, the compulsory abolition of proportional representation and the grossly unfair reapportionment. These were wisely rejected by the people.

And finally the convention was guilty of failures to act. The people can only correct these through the Legislature. So I most earnestly submit that your honorable bodies make up for the two principal failures of the Constitutional Convention.

I strongly urge constitutional amendments: (1) to protect the water-power resources of the people against exploitation by private companies and (2) to change the Constitution to provide a new method of reapportionment.

Time and time again the people of the State have clearly indicated that they want action on both of these matters. But regrettably, time and time again, the representatives of the people neglected the interests of the people and thwarted their desires. In a democracy the people's will should be respected. So I present a strong plea that at this session your honorable bodies execute the will of the majority of the people of our State.

WATER POWER

The Constitutional Convention had the opportunity to protect the people against spoilation of their water-power resources. A proposal declaring that the water-power resources of the Niagara and St. Lawrence Rivers shall remain inalienable and shall be developed by the people was defeated by a comparatively small margin.

We have, unfortunately, allowed nearly all of our natural resources to fall into private hands for development for private profi.t Only two large [illegible]

Governor's Proposals

By The Associated Press.

ALBANY, Jan. 4.—Some of the highlights of Governor Lehman's message to New York's Legislature were:

UNEMPLOYMENT INSURANCE—"The administration of the law has not been perfect. We have not attempted in any way to conceal these imperfections. Every effort will be made to maintain 1939 benefit payments on a current basis. Experience has also suggested the need for several legislative amendments."

LOW-RENT HOUSING—"I recommend that a new agency be set up in the Executive Department to handle this problem for the State. I most earnestly submit for your consideration that any appropriation that may be authorized at this session be contingent upon the development and continuance of this financial partnership between the Federal, State and local governments."

LABOR—"I recommend tightening of the labor laws to eradicate creation of fictitious partnerships designed to mask the relationship of employer and employe and the scheme to compel employes to hold themselves out as independent contractors. State-wide regulation will not handicap reputable employment agencies."

MORTGAGE MORATORIUM—"I recommend that the Moratorium Law be again extended, but with a modification which would compel that in addition to interest and taxes, the owner be required to pay a eertain fixed amortization on principal. It is vitally important that we authorize the creation of mortgage banks at this session."

CIVIL SERVICE—"I suggest that a commission be created by the Legislature to make a thorough study and formulate recommendations for consideration of the Legislature in 1940."

AGRICULTURE—"Cash farm income, despite the severe curtailment of consumer purchasing power, will not be greatly below the $312,000,000 of 1937. This creditable showing is in contrast to the severe decline in agriculture income elsewhere in the nation. Expansion of our farm-to-market roads system should be continued in so far as the resources of the State will permit."

PUBLIC UTILITIES—"While the results are naturally very gratifying, there are certain amendments to the Public Service Law which ought promptly to be made in order to protect further the consumer."

YOUTH—"I recommend the creation of an advisory council on youth in the Executive Department. The objective of the council should be to draft a broad constructive program which will seek to stimulate cooperation between labor, industry, local communities and State services."

REAPPORTIONMENT—"I urge that should the Legislature fail to reapportion, within two years following the beginning of any new decade, provision be made for a reapportionment by a constitutional commission."

WATER POWER—"These public resources must be developed in accordance with the enlightened thought of the day under State ownership and State control so that all our people may be able to secure the benefits that should come to them from their own property."

NON-DISCRIMINATION—"The equal protection of the laws is the greatest blessing that can be conferred by a democracy upon its citizens. I recommend legislative action that will give real significance to the declared principle."

population of the State has 45 per cent of the members of the Senate and only 41 per cent of the members of the Assembly.

The population ratio under the Constitution for representation in the Assembly is fixed at 73,000. Yet at least a dozen counties having a population of less than 30,000 each have an Assemblyman. In New York City there are several Assembly districts where one member represents more than 250,000 persons.

The provisions of the State Constitution calling for the reapportionment of legislative districts have been for years carelessly violated by the Legislature. Again

dous advances we have made in the past six years. Our labor code has been greatly strengthened. It now stands out as the most progressive and humane code in the United States.

In view of these recent advances there are no new labor laws of equally great significance to be considered by your honorable bodies at this session. There are, of course, many improvements which can and should be made in our labor code. Suggestions will undoubtedly be made to the Legislature by groups representative of both business and labor. I know that you will give careful study to these suggestions and recommen-

methods to cope with a small group of labor law violators. These employers have sought, by various devices, to evade their obligations under the Workmen's Compensation Law, the Unemployment Insurance Law, the Prevailing Rate of Wage Law, the Minimum Wage Law, and other acts designed to afford a measure of security to the wage earners.

One of the methods used by this unscrupulous group has been the creation of fictitious partnerships designed to mask the relationship of employer and employe. Another scheme is to compel employes to hold themselves out as independent contractors. Employes are thus deprived of the benefits conferred upon them by law. Moreover, the employers who engage in these practices gain an unfair advantage over their legitimate competitors.

I recommend the tightening of the labor laws to eradicate these evile.

FEE-CHARGING EMPLOYMENT AGENCIES

Our experience with fee-charging employment agencies over a long term of years has emphasized the need for State regulation in order to protect workers, employers and reputable agencies alike. It is unfortunate that some of those agencies continue to exploit thousands of wage-earners.

Applicants for work have been charged exorbitant fees. Some have been sent to non-existent jobs and marooned in strange communities with no money for food, lodging or transportation. Others have received jobs from which they were arbitrarily discharged, after working only long enough to pay the agency fee. State-wide regulation will not handicap reputable employment agencies. It will, on the contrary, give such agencies protection against racketeering competitors.

MORTGAGE MORATORIUM

The moratorium on the foreclosure of mortgages in New York State has been in effect since 1933. Last year it was again extended to Jan. 1, 1940.

It has become increasingly clear that the process of extending the moratorium each year cannot go on indefinitely. On the other hand, its abrupt repeal would be ill-advised. Small home owners and real estate interests generally would be adversely affected.

Some provision must be made to allow the gradual tapering off of the moratorium. There must eventually be normal resumption of contractual obligations. But any solution must give due consideration to the interests not only of the mortgage investor but of the small home owner as well.

I therefore recommend to your honorable bodies that the moratorium law be again extended, but with a modification which would compel that in addition to the interest and taxes, the owner be required to pay a certain fixed amortization on principal.

MORTGAGE BANKS

For the past three years I have strongly urged the establishment of mortgage banks, privately

which provide so fertile a field for civic unrest and for the attacks of those who would undermine our democratic form of government. I am happy and proud, as Chief Executive, to have sponsored and urged the adoption of these laws by the Legislature.

Although the ultimate goal remains, of course, the same, our task is quite different from that of the past several years. We are ever mindful that for democracy to work, its services should not only expand and grow but it must render efficient and sound administration. At the present we must devote our attendtion principally to the perfection and consolidation of the social gains we have already achieved.

The new laws of the past six years have placed upon the administrative branch of the State intricate and difficult tasks. There is no question that the efficiency of some of these laws can be improved. We recall that often it was necessary to formulate them under pressure of emergency conditions. This is a good time to re-examine the legislative acts in order to strengthen the processes of their administration. We should smooth out any rough edges. We should correct any mistakes disclosed by experience.

ADMINISTRATIVE REVIEW

In launching extensive social and labor programs we have resorted more and more to quasi-judicial determination by administrative agencies. At the last election the people rejected a proposal for the judicial review of the facts as well as of the law of virtually all decisions of administrative officers and agencies.

I opposed that proposal because it was formulated without a thorough examination of the methods of operation of the different administrative agencies. It seems to me unwise to freeze into the Constitution a rigid procedure which would handicap, and, in part, destroy the beneficial effects of the welfare and labor reforms which we fought so hard to initiate.

Some believe that the law does now provide proper and reasonable safeguards against arbitrary determinations by administrative bodies. It is quite possible that in the exercise of quasi-judicial functions some abuses may exist or may hereafter develop, but the problem should be studied as it applies to each particular agency. What may be sound with respect to one administrative tribunal may be disastrous for another.

Opposes Transfer to Courts

I stand opposed to the transfer of purely administrative functions to the courts. We cannot, in modern government, attempt to destroy administrative technique. Modification of procedure, if needed, should be undertaken only after careful study of each administrative process on an individual basis.

As part of my plan always to improve and perfect the administrative branch of government, I intend to appoint a acommissioner under the executive law to study the entire problems of administrative rulings. A thorough appraisal, I am sure, of our executive machinery will be beneficial. This commissioner will report to me prior to the 1940 session of the Legislature so that his report and my recommendations can then be made available to the Legislature.

DIVISION OF STATE POLICE

Undoubtedly, one of the hardest working groups of State employes are the members of the State po-

tive budget ... previous years.

CONSTITUTION OF 1938

For a second reason this is a historic occasion. It marks the commencement of a new era in the constitutional history of New York. Not since 1894 has the State had a new Constitution. The convention, in framing the Constitution and the people in adopting it, have imposed upon this Legislature an important duty. The real effectiveness of the changes authorized by the people will depend upon how wisely the Legislature will implement the Constitution with the necessary laws.

SEARCHES, SEIZURES AND WIRE-TAPPING

At the Constitutional Convention I recommended that in our Bill of Rights we embody a firm protection of the individual citizen and of his papers and records against unreasonable searches and seizures by public officers. Furthermore, I urged that we put a stop to unconscionable wire-tapping of telephone conversations. The abuses are too well known.

The convention did in part adopt the safeguards. It is now necessary, in order to make them effective, that we amend our statutes. Particularly, we need a law which will prohibit any prosecutor or public official from tapping telephone conversations without first obtaining authority from the Supreme Court. Such permission will not be given unless the reason for the demand and the names of the persons whose conversations are to be intercepted are approved by the judge.

Penalties Are Urged

Also the statutes should require that penalties be imposed upon any law-enforcement official who willfully violates the safeguards which have been made part of the Bill of Rights.

At the convention several of us advocated that the State Constitution follow the Federal practice of jurisprudence, namely, that evidence obtained in violation of the constitutional guarantee cannot be used. The principle is so inherently just and necessary in a democracy that it should be made part of the Constitution and I hope that it will be. The main argument for not incorporating this principle in the Constitution was that the matter really came within the province of the Legislature and so the Legislature could by statute prohibit the use of such illegally obtained evidence.

I recommend that your honorable bodies at this session enact legislation to achieve that end. In my opinion, such legislation would be sound and distinctly in the best interests of democracy. Any contrary rule proceeds on the theory that the end justifies the means. Dictatorship, persecution, tyranny and oppression invoke the weapons of unlawful search, seizure and wire-tapping. We want none of them in America.

Faith in Government Paramount

Surely government should not be allowed to take advantage of its own infringement of a citizen's individual liberties. Government cannot afford to repudiate its own guarantees. Democracy survives only on the citizen's genuine faith in the justice of its government. Only the strict observance of constitutional restraints will prevent periods of hysteria and madness. Today

on, incidental improvements rendered necessary or desirable may be included as part of the elimination project. And thees also shall be paid by the State.

Since the State will be assuming virtually all of the cost, the State Department of Public Works should do the construction work. Exception can be made for the cities of New York, Buffalo and Syracuse, which have special commissions to handle eliminations. Work that may be performed by the railroad should be subject to public bidding, accompanied by the right to an appeal to the Department of Public Service in cases of improper awards.

The State cannot afford to be put in a position where its taxpayers have to furnish the money and the railroads are permitted to expend that money without careful public regulation and restriction. Furthermore, the statute should require the Department of Public Service to allocate the amount of the benefit derived by the railroad.

HEALTH INSURANCE

State participation in medical care is a reality. The State cares for and maintains some 80,000 mental patients in its hospitals at a cost of nearly $40,000,000 per year. In addition, its Department of Health operates tuberculosis and other hospitals, conducts the work of prevention and control of communicable diseases throughout the State and has undertaken a program of pneumonia, syphilis and cancer control.

Through the Department of Social Welfare, we furnish free medical care to thousands of families on relief. The division of medical care supervises over 1,000 hospitals, sanatoria and dispensaries which annually treat some 500,000 patients at public expense.

It is estimated that the total expenditures from Federal, State and local funds for medical care amount to several hundred million dollars a year.

Several nation-wide health surveys have revealed these astounding facts:

Six million men, women and children are sick on any average Winter day in the United States.

Loss of earnings due to sickness disability among workers amounts to $1,500,000,000 a year.

It is estimated that one billion days of work are annually lost through sickness.

The extent of the economic risk is evidenced by the fact that illness occurs nine times as often as industrial accidents.

Cost Goes into Billions

The cost of medical care is about $3,500,000,000 ($30 per capita) in a normal year. Of this vast sum, 79 per cent is paid by patients themselves, 14 per cent is met by government and 7 per cent by private industry and philanthropy.

Only those families having incomes of over $2,000 per year begin to get adequate care. The 80 per cent of American families with incomes of less than $2,000 a year and the 50,000,000 grouped in families with incomes of $1,000 a year or less receive inadequate care or no care at all.

Four out of every ten people who are sick in the United States receive no medical care.

Sickness is directly responsible for 30 per cent to 40 per cent of all cases requiring public or private charity.

These facts have awakened citizens and public officials to a realization of the great social responsibility owed to those unfortunate individuals who receive

AND WELFARE SERVICES FOR SCHOOL CHILDREN

In 1936 I approved an act which authorized free transportation for children attending non-public as well as public schools. Last year this act wos declared unconstitutional by the Court of Appeals.

This constitutional barrier is removed by the new Constitution. Appropriate legislation should now be passed to effectuate the mandate of the people.

The new Constitution also gives to the Legislature power to provide for health and welfare services for all children, either directly or through subdivisions of the State, including school districts. It is my recommendation that you give thorough study to this matter in order to make provision for the extension of health and welfare services to all school children.

SLUM CLEARANCE AND LOW RENT HOUSING

Once more New York State has made history in the field of housing. We remain in the vanguard of progressive and humane government. No other State in the nation provides in its Constitution for a long-range plan. The State and its subdivisions are granted broad and effective financial powers which will enable them to build decent homes for families of low income, and to clear, replan and reconstruct slum areas.

The new Constitution is comprehensive in its provisions, as it should be. It does not follow, however, that the State should immediately exhaust all the powers granted. The course of wisdom dictates some restraint so that we may adjust and readjust our plans, if necessary, in the light of accumulated experience.

Urges New Housing Agency

To begin with, I recommend that a new agency be set up in the Executive Department to handle this problem for the State. This agency will take the place of the existing State Housing Board. It will be the duty of this new agency to examine the project plans of localities and to determine whether they meet the conditions under which loans may be extended and subsidies may be granted by the State.

It was in 1934 that I recommended to the Legislature the first step in the low-rent housing program. We then authorized the cities to create municipal housing authorities. It was our intention that these authorities, with the assistance of local, State and Federal funds, would construct, manage and operate the projects.

In 1937 and 1938, when I urged the Legislature to amend the Constitution along the lines contained in the new Constitution, I once again stated that a program of low-rent housing and slum clearance was predicated upon a partnership between the three governments--Federal, State and local. It is my firm belief that all three must participate; that all three must assist financially.

Hence I most earnestly submit for your consideration that any appropriation that may be authorized by your honorable bodies at this session be contingent upon the development and continuance of this financial partnership between the Federal, State and local governments.

NON-DISCRIMINATION

One of the splendid provisions in the new Constitution forbids discrimination against any person in his civil rights on the ground of race, color or creed. The equal protection of the laws is the

remain the property of the people. They are at Niagara Falls and on the St. Lawrence River.

Large utility companies have been manoeuvering to get control of these major power resources. A good many years ago the utility companies succeeded in obtaining a special charter which gave them ownership of all the St. Lawrence River resources. It was only when public opinion was aroused at the outrage of this special charter that the statute was repealed.

Urges River Protection

Not far in the past, a second spectacular effort was made to lease the State water-power resources on the St. Lawrence to a private corporation. There is always grave danger that these power resources may fall into private hands unless we protect ourselves through the Constitution.

The people have by constitutional provision protected their forest preserve and their barge canal against encroachment by private interests for private gain. Certainly it is no less important that they protect their water power resources against any possible alienation by private interests for private gain.

The experience of this State and of other governmental units clearly demonstrates that we can make use of our great natural water power resources for the benefit of the people and can do it without loss to the State. These public resourses must be developed, in accordance with the enlightened thought of the day, under State ownership and State control, so that all of our people may be able to secure benefits that should come to them from their own property.

LEGISLATIVE REAPPORTIONMENT

The last apportionment of Senate and Assembly districts was made in 1917. Since that time the population of the State has increased and enormous shifts of population have taken place.

A fair and equal apportionment is in effect forbidden by the Constitution as now worded. It was purposefully so drafted by the Constitutional Convention of 1894. The apportionment article starts with generalities prescribing a rule of fair and equal representation. The general statements are then followed by concrete rules which completely nullify the sound principles that went before. In addition, the Constitution prescribed a great variety of intricate and complicated rules which make the task of the Legislature almost impossible and judicial interpretation by the courts extremely difficult. No apportionment since the Constitutional Convention of 1894 has received affirmative approval from the Court of Appeals.

There may be merit in the contention that recognition should be given to area and variety of interests as well as to population.

Condemns Present System

However, a fundamental tenet of democratic government requires that in a bi-cameral Legislature at least one of the houses should be truly representative of the people. Its membership should follow the sound principle that each legislator represent as nearly as possible an equal portion of the electorate.

Our present system of apportionment is utterly at variance with the sound principle. Greater New York with 55 per cent of the

Its membership should follow the sound principle that each legislator represent as nearly as possible an equal portion of the electorate.

Our present system of apportionment is utterly at variance with the sound principle. Greater New York with 55 per cent of the

and again special messages were sent by me to the Legislature of 1933, 1934 and 1935, urging immediate action. Apparently purely partisan and political reasons controled. No bills were passed.

Asks for Reapportionment Board

This history demonstrates the need for a self-executing mechanism, in the event that the Legislature again fails to act. I urge that should the Legislature fail to reapportion, pursuant to the constitutional mandate, within two years following the beginning of any new decade, provision be made for a reapportionment by a constitutional commission consisting of one appointee of each of the following State officers: The Governor, the temporary President of the Senate, the Speaker of the Assembly, the Attorney General and the Secretary of State.

Unfortunately, our Constitution does not permit a legislative reapportionment until after the Federal census of 1940.

To assure a fair and sound reapportionment under the new census it is incumbent upon your honorable bodies at this session to adopt a constitutional amendment carrying out the recommendations I have just presented.

LEGISLATION

The wholesome industrial relationship existing in the State during the past year has furnished convincing proof of the wisdom of our labor legislation.

We have, by legislative enactment, done much to make partners of business and labor. In other days violence and coercion were the media of industrial dispute. Today reason, contract and law decide. In creating the State Board of Mediation and the State Labor Relations Board we have provided machinery for the peaceful and equitable settlement of the problems and the disputes that may occur between employer and employe.

We can be proud of the tremen-

dations.

There are some matters that I wish to call to your particular attention at this time.

UNEMPLOYMENT INSURANCE

The Unemployment Insurance Law has only been in effect, insofar as the payment of benefits is concerned, since the beginning of the year.

Benefit payments for the calendar year 1938 approximate $100,000,000. The original estimate of the number of checks to be issued in 1938 was 6,000,000. In fact, during the past year over 9,000,000 checks have been written for eligible claimants. In spite of the huge payments, the fund is larger than it was when benefits commenced last January.

The administration of the law has not been perfect. This was to be expected. We have not attempted in any way to conceal these imperfections. We have devoted our best efforts to improve and render more effective the administration of the law. A thorough resurvey of procedures has been initiated.

Many administrative changes have been adopted which will help to eliminate the lags in benefit payments encountered during the first year of operation. In effecting these administrative changes, full advantage has been taken of past experience. Every effort will be made to maintain 1939 benefit payments on a current basis.

Experience has also suggested the need for several legislative amendments. The Unemployment Insurance Law requires the advisory council to make recommendations to your honorable bodies for such amendments. I know that you will give careful study and consideration to those recommendations when submitted.

LABOR LAW VIOLATORS

The Industrial Commissioner and the Atorney General have been making a special study of

It is unfortunate that the Legislature has not taken action. I believe that the failure to do so has seriously retarded the revival of the real estate market.

Real estate plays a most important part in our economic system. Basically, real estate feeds upon the mortgage market. When this market is shut off new construction and refinancing of existing mortgages are prevented. The result is a stagnant real estate market—no new construction—more foreclosures.

There must be a free and ready flow of mortgage money if the building industry is to be revived. In the past, insurance companies, banks and guaranteed mortgage companies supplied the necessary unds. The small private investor, who formerly turned to the mortgage guaranty companies, now finds it impossible to obtain a sound mortgage investment and, therefore, his funds are not working.

In the last analysis, the ever-growing needs of the community for increased construction and the refinancing of old and defaulted mortgages must be met by new investments by the public.

Favors Mortgage Debentures

Mortgage banks are, in my opinion, the agencies best adapted to handle such investments. They will be empowered to issue debentures secured by general assets, the major portion of which will be real estate mortgages. Each debenture will be secured by all of the mortgages owned by the company. Complete diversification of the security is thus achieved.

In addition the debentures will have the following advantageous characteristics:

(a) Marketability, so that the holder may at all times feel that he can convert his investment into cash without serious loss;

(b) Certainty of income, so that

NEW AIR FIGURES SWAY PRESIDENT

Germany and Italy More Than a Match for Rest of World, He Learns

AVERAGES 500 A MONTH

Reich Produced 1,000 Warplanes in November, Triple Our Average With 400,000 Workers

WASHINGTON, Dec. 31 (AP).—Authorities reported today that President Roosevelt's coming recommendations for an expanded air force would be supported by new and "startling" figures relating to German and Italian aerial power.

Well-informed persons said Mr. Roosevelt had heard from some of his advisers that the Nazi and Fascist powers were able to dictate the Munich settlement of Europe's September crisis by no less than a six-to-one margin in actual fighting planes over Great Britain and France.

Today, on the basis of revised estimates which authorities said were in the Administration's hands, Germany and Italy are more than a match in the air for the rest of the world. The reports, mostly piecemeal but represented to be well authenticated, have been sifted by War Department experts before being turned over to the White House.

The evidence that Germany's aerial armament, reinforced by Italy's, threatened a complete shift in the world balance of power was said by some close to the Administration to have influenced Mr. Roosevelt's recent conferences here with the American envoys to Germany, Great Britain, Italy and France.

Reported German Production

Military and diplomatic officials said the evidence had given direction to the annual message to Congress which Mr. Roosevelt is to deliver on Wednesday and to the special arms message, proposing a vast expansion of American air power, to follow a week later.

Among the reports said to have received credence in high administration circles were:

In a single month, November, Germany's new aircraft plants, geared to war speed, turned out more than 1,000 warplanes, triple the American monthly average this year.

Any one of upward of a half dozen of the major German plants employs more men than the entire American industry, about 36,000 at present. Altogether, probably 400,000 skilled German technicians are at work now on aircraft.

Though Great Britain doubled her production rate in 1938, it is still only half Germany's average for the year.

France, a few years ago rated the world's strongest air power, did not complete a single fighting plane in a recent period of several weeks.

Mr. Roosevelt described an administration proposal to train 20,000 college youths annually as air pilots and has approved plans to school an even larger number of aviation

timates which authorities said were in the Administration's hands. Germany and Italy are more than a match in the air for the rest of the world. The reports, mostly piecemeal but represented to be well authenticated have been sifted by War Department experts before being turned over to the White House.

The evidence that Germany's aerial armament, reinforced by Italy's, threatened a complete shift in the world balance of power was said by some close to the Administration to have influenced Mr. Roosevelt's recent conferences here with the American envoys to Germany, Great Britain, Italy and France.

Reported German Production

Military and diplomatic officials said the evidence had given direction to the annual message to Congress which Mr. Roosevelt is to deliver on Wednesday and to the special arms message, proposing a vast expansion of American air power, to follow a week later.

Among the reports said to have received credence in high administration circles were:

In a single month, November, Germany's new aircraft plants, geared to war speed, turned out more than 1,000 warplanes, triple the American monthly average this year.

Any one of upward of a half dozen of the major German plants employs more men than the entire American industry, about 36,000 at present. Altogether, probably 400,000 skilled German technicians are at work now on aircraft.

Though Great Britain doubled her production rate in 1938, it is still only half Germany's average for the year.

France, a few years ago rated the world's strongest air power, did not complete a single fighting plane in a recent period of several weeks.

Mr. Roosevelt described an administration proposal to train 20,000 college youths annually as air pilots and has approved plans to school an even larger number of aviation mechanics. Informed officials are convinced he will ask Congress to authorize expansion of the army air force to some 10,000 planes. The navy already has authority for a fleet of 3,000. Large military orders would call for top speed operation of the aviation industry and a gradual increase in productive capacity, a primary objective.

Plane Production of Powers

Official and semi-official sources provided these revised figures on the aerial activity of the principal powers:

Germany—The average monthly output of planes for the entire year is 500. Some 400,000 at work on aircraft; a third of all conscripts are assigned to the air forces.

Great Britain—The monthly average output for the year is 250 planes. The Royal Air Force was expanded from 69,000 to 85,000 men between March and November and is to be increased to 100,000 by June.

Italy—The monthly average is 200 planes. All conscripts get primary air training, with the pick assigned permanently to the air forces. The budget for the next fiscal year calls for a 75 per cent increase for the air forces.

France—The actual monthly average undisclosed, but is understood to be far less than Italy's. Energetic efforts being made to remedy the deficiencies.

Soviet Russia—The exact figures are secret. Several hundred thousand youths receive pre-flying instruction annually before they enter the army, at the age of 19, for two years' service.

S. Paul Johnston, editor of the magazine Aviation, turned over to officials information he obtained this Fall in a five weeks' tour of Europe. He reported Germany was two and one-half times as strong in the air as the United States, and rated the powers' relative strength thus:

Germany 10, Italy 6, Great Britain 5, United States 4, France 2.

The conflict between this information and estimates accepted as official until a few weeks ago was illustrated by the current publication in the army's official command and general staff quarterly of these reports of fighting planes:

British Empire, 4,000; France, 3,000; Russia, 4,700; Germany, 3,000; Italy, 3,200; Japan, 2,000.

The United States Army at the year's end has approximately 2,000 first-line planes in service and the navy the same number.

SAY REICH BUILDS BETTER AIRCRAFT

Experts Tell House Group We Are Year or Two Behind in Military Planes

COUNTRY IS PUT FOURTH

Germany, Russia and Italy Ahead of Us—25,000 Flying Nazis Contrasted to Our 950

WASHINGTON, March 22 (AP).—Congress has been told that Germany is building better military planes than the United States, primarily because it leads the world in aircraft research and development.

Witnesses before a House Appropriations subcommittee testified that Germany had more personnel, more equipment, such as wind tunnels, and spent more than the United States.

Dr. Vannevar Bush, vice chairman of the National Advisory Committee for Aeronautics, declared in testimony made public today:

"A few years ago this country led the world in the development of aircraft and in aircraft research, but we have lost that position.

"Today Germany is building better planes for military purposes than we are. That, of course, is a thing we do not like to admit. That is due primarily to the fact that they are putting into this work many times over what we are putting into it in this country."

Dr. Bush asked approval of a $4,000,000 fund for construction of a new research base at Sunnyvale, Calif., and expansion of existing facilities at Langley Field.

Major Gen. H. H. Arnold, Army Air Corps chief, told the committee that the United States was behind other countries in technical development.

"Due to a lack of research facilities," he said, "our performances today, in my opinion, in army and navy airplanes are at least one year and probably two years behind where we should stand."

Visit to Germany Is Recounted

Dr. George W. Lewis, the subcommittee's aeronautical research director, who said he had visited Germany, declared that the speed of German bombers had been stepped up from 312 miles an hour to 342 miles. Germany's pursuit planes, he said, have a speed of 420 miles.

The United States Army, he added, wants bombers with speeds of more than 300 miles an hour and pursuit planes of at least 400 miles. The ultimate velocity of these planes, he predicted, would be 550 miles an hour.

Dr. Lewis said that where the United States has a wind tunnel capable of handling a velocity of 500 miles an hour, Germany's has a maximum of 700 miles.

"They have speeded everything up and taken advantage of what has been done here and made it better," he testified. "The equipment at Sunnyvale will be constructed to excel that in Europe."

Robert Hinckley, member of the Civil Aeronautics Authority, assert- that Germany far outranked other major powers in airplane pilots. Using Germany's total as 100 Mr. Hinckley said the other nations ranked in this order: Russia, 80; Italy, 60; Great Britain and the United States, 30; France, 20.

"Germany has 25,000 airmen completely trained as experts yearly," Mr. Hinckley said. "The United States has 950."

Stronger Coast Defenses

Major Gen. George V. Strong of the general staff said that the army's war plane division thinks present world conditions make it "highly necessary" that the United States commence strengthening its defenses on the Atlantic and Gulf coasts.

He said that a five-year coast defense program initiated in 1937 was restricted to the Pacific Coast, Hawaii and Panama.

He testified on President Roosevelt's recent request for $6,539,287 for seacoast defense to supplement the $7,250,523 in the War Department's regular appropriation.

General Strong said $2,492,504 would be devoted to construction of two fixed batteries on the Atlantic Coast and a "badly needed" submarine mine depot at Fort Monroe, Va., and to provide certain shore installations for submarine mining in the harbor defenses on Sandy Hook.

Brig. Gen. Earl McFarland, assistant chief of ordnance, testified that 75 per cent of the army's $110,000,000 program for procurement of "critical" equipment, arms and ammunition would be filled by private industry in the next two years.

eH said the program would "have the effect of increasing general business activity." It is designed to furnish the regular army and National Guard with semi-automatic rifles, light and heavy artillery, tanks, anti-aircraft and anti-tank guns and ammunition.

NEW REICH DECREES PERMIT 14-HOUR DAY

Exceptions to 8-Hour Law Are Authorized for 'Important State-Political Tasks'

COVER 60% OF INDUSTRY

Labor Limited Only by Ten-Hour Rest Period in 24 Rather Than by Time Employed

Wireless to THE NEW YORK TIMES.

BERLIN, Dec. 30.—In line with Germany's intensified armament race and the degree to which it is hampered by a growing labor shortage, Minister of Labor Franz Seldte issued new labor decrees today permitting exceptions to the eight-hour work day law and the rest provisions for Sundays and holidays. The order applies "in so far as such exceptions are urgently required for the fullfillment of important State-political tasks."

By tradition the designation "important State-political tasks" applies primarily to the entire armament industry, working for the army, navy and air force.

In many of these industries the ten-hour working day is already the rule rather than the exception. Today's decrees, however, permit the extension of the working day even beyond ten hours because the only limitation that is imposed is that an "uninterrupted daily rest period must amount to not less than ten hours."

In effect, therefore, the new decrees replace the principle of the eight-hour day with the principle of an uninterrupted rest period of ten hours out of every twenty-four. This would permit the theoretical extension of the working day to fourteen hours, but the new labor code, effective Sunday, also provides that male workers must have a rest period of at least a half hour after six hours of work, and women workers must have a twenty-minute rest after four and one-half hours.

Theoretically, the new labor code retains the principle of the eight-hour day on the ground that it has proved to be best for the health and efficiency of workers and for the enterprise itself. The only exception for extending the work day up to a maximum of ten hours was strictly limited to work necessary to keep a plant intact that could not be performed during the regular working period.

At the same time the designation "important State-political tasks"—and with it the new labor decrees—could be extended to embrace all the industries working for the State. That means approximately 60 per cent of Germany's entire industry and 80 per cent of the building industry.

WE RATE 5TH IN AIR, SAYS GEN. ANDREWS

G. H. Q. Army Air Chief Warns We May Soon Be Vulnerable to Overseas Raids

GIVES DEFENSE PROGRAM

Tells Aeronautic Meeting We Need Long-Range Bombers to Guard Americas

By FREDERICK F. GRAHAM
Special to THE NEW YORK TIMES.

ST. LOUIS, Mo., Jan. 16.—Major General Frank M. Andrews, chief of the general headquarters air force of the army, told the annual convention of the National Aeronautic Association today that the United States now is a fifth or sixth-rate air power, but that in building up our air strength we are "saying in unmistakable language: 'Hands off the Western Hemisphere—America is for Americans'."

General Andrews said that the G. H. Q. air force, which is the entire army combat air force in Continental United States, has only slightly more than 400 fighting planes today, as compared with Germany's force, estimated all the way from 4,000 to 10,000 planes.

The estimate did not, of course, take into account the slightly fewer than 2,000 airplanes of all types—combat, training and transport—which the navy has.

"Air power," the general said, "is not a commodity that can be procured in the open market, no matter how much gold and silver may be available. Money will not buy it, desire will not create it. Timely foresight, based upon an intelligent conception of the potentialities of air power and its effect upon the destiny of nations, is the only formula that can assure its development."

A nation's ability to manufacture airplanes and the existence of superior manpower available for training as pilots, navigators, mechanics and such do not make air power, either, he declared. Such assets do constitute potential air power, he agreed, but the time element is also important. It requires many months to train pilots, ground crews and technical personnel, and unless a nation has those projects started and ready for expansion, an emergency may find it unable to catch up with its rivals.

Calls for Long-Range Bombers

In discussing what would be an effective air force for our nation, General Andrews said:

"A nation's geographic situation has a large bearing on the constitution of its air force. In any land or naval engagement the advantage lies with that force which has the

session by this country, in adequate degree in our military organizations, will constitute strong insurance that no hostile army will ever approach either coast for the purpose of landing on our shores; and that no hostile power will ever establish air bases in this hemisphere."

General Andrews's speech was the chief event of the evening session of the convention.

A series of closely integrated and coordinated programs calculated to restore to American aviation the world leadership it once enjoyed were discussed and planned at various committee meetings through the morning and afternoon sessions.

Representatives of the army and navy, the Federal Government, educators in aviation and public schools, aircraft manufacturers, air transport operators, racing and private fliers took active part in the conferences. All of the groups appeared to take the view that this country had fallen behind the world in the parade of wings, but that the lag could be overcome by a well-rounded, sustained program.

Delegates split into three groups for consideration of plans for the expansion and advancement of aviation schools, youth training and private flying.

The N. A. A. youth program section, under the leadership of William Enyart, secretary of the parent body, brought forth at the close of its session a resolution urging the education of youth from 10 years of age up to the time they are able to qualify for the civil training program recently announced by President Roosevelt.

Recommendations Made

The resolution finally adopted read:

(1) We urge the introduction of some form of aviation education or activity in every junior high school and college in the United States, and the establishment of a section of aviation in the Federal Office of Education.

(2) We urge the introduction of model building activity on the part

facturing industry; an increase in commercial air transport; encouragement of research, and expansion of private flying.

"There can be no stabilization so long as aviation is a fever chart for national alarms and fears, however, and we must attain stabilization of the domestic market and stabilization and maintenance of a larger export market."

Germany and Italy, he pointed out, have already reached the saturation point so far as their domestic markets are concerned, and are now turning to South America. Their craft criss-cross the continent from coast to coast and from trade center to trade center, and "we're not going to be able to meet the challenge of their attack in South America unless we have an integrated and sustained aviation program."

The convention will close tomorrow after a full session. Brig. Gen.

persons between the ages of 18 and 25.

"So universal is aviation interest in all age groups," reported Ernest Gamache, Mr. Rockefeller's research director, "that we may conclude it ranks No. 1."

He cited a survey by Professors Paul Witty and David Kopel of Northwestern University on youth's interests which showed boys chose aviation as their primary interest "over the traditional cowboys, doctors, soldiers or policemen."

Charles F. Horner, president of the National Aeronautic Association, said that recent criticism of Colonel Charles A. Lindbergh is "pure emotionalism."

"Anybody who knows Lindbergh," Mr. Horner said, "knows that he is not the kind of man to seek publicity, decorations, praise or anything else. I can't find any one who

"Air power," the general said, "is not a commodity that can be procured in the open market, no matter how much gold and silver may be available. Money will not buy it, desire will not create it. Timely foresight, based upon an intelligent conception of the potentialities of air power and its effect upon the destiny of nations, is the only formula that can assure its development."

A nation's ability to manufacture airplanes and the existence of superior manpower available for training as pilots, navigators, mechanics and such do not make air power, either, he declared. Such assets do constitute potential air power, he agreed, but the time element is also important. It requires many months to train pilots, ground crews and technical personnel, and unless a nation has those projects started and ready for expansion, an emergency may find it unable to catch up with its rivals.

Calls for Long-Range Bombers

In discussing what would be an effective air force for our nation, General Andrews said:

"A nation's geographic situation has a large bearing on the constitution of its air force. In any land or naval engagement the advantage lies with that force which has the longer range weapons. This same principle applies to the defense of an area by an air force. The nation which has an air force that is able to reach hostile air bases without fear of having its own bases attacked has a distinctly superior advantage in any conflict. It is the .45 calibre revolver against a baseball bat, and embodies such a threat that war may not be waged. The man with the revolver can secure his demands from the man with the baseball bat without actually firing gun.

"Our geographical location is such that our air force must be so constituted that it carries the revolver. From an air force standpoint, this means equipping our air force with enough airplanes of sufficient range and bomb carrying capacity to enable them, from available bases, to reach any locality where an enemy might attempt to establish bases, either land or water."

Admitting that there is an urgent requirement for local defense planes of the fighter type, reconnoissance and observation and other short-range craft in any well-balanced air force, he said the prime requirement was long-range bombardment planes.

Warns of Aviation Advance

The idea that this country is relatively safe from air raids was discounted by General Andrews. He deplored a tendency in this country to think that the science of aeronautics has reached the peak of its inventiveness and that aircraft capable of spanning the Atlantic or Pacific with full military load and returning to their bases are "figments of a Jules Verne imagination."

"Regardless of how much we would like to prevent it, our ocean bulwarks are shrinking rapidly," he declared. "Aeronautical development will make of the Atlantic an English Channel. When that time arrives—and the world is on the threshold of that period—the problem of making America impregnable in the air assumes a more serious aspect than that presented today."

Consequently, he continued, America faces two problems, one for "today" and one for "tomorrow." The present problem involves the establishment of a sphere of air influence around the Western Hemishere. "Tomorrow's," and by that he said he means the problem that will confront the nation before many years have passed, involves security against air attack initiated from bases across the ocean.

"Our country," he asserted, "ought to be the first to span the ocean both ways non-stop."

The nature of the next war will be greatly changed by air forces, he predicted, and seats of government, industrial areas and large population centers will probably feel the first brunt of war.

Air power will become increasingly vital with the passing of years, he predicted, and will play a major part in shaping the policies of nations.

Air Power Is Imperative

"Air power is imperative for the security of this nation, and its policies," he concluded. "Its pos-

schools, aircraft manufacturers, air transport operators, racing and private fliers took active part in the conferences. All of the groups appeared to take the view that this country had fallen behind the world in the parade of wings, but that the lag could be overcome by a well-rounded, sustained program.

Delegates split into three groups for consideration of plans for the expansion and advancement of aviation schools, youth training and private flying.

The N. A. A. youth program section, under the leadership of William Enyart, secretary of the parent body, brought forth at the close of its session a resolution urging the education of youth from 10 years of age up to the time they are able to qualify for the civil training program recently announced by President Roosevelt.

Recommendations Made

The resolution finally adopted read:

(1) We urge the introduction of some form of aviation education or activity in every junior high school and college in the United States, and the establishment of a section of aviation in the Federal Office of Education.

(2) We urge the introduction of model building activity on the part of city Recreation and Park Departments.

(3) We believe that a nation-wide, step-by-step system of youth training should be established to develop graded education in the age range of 10 to 18 years.

Ralph Waterhouse, superintendent of public schools in Akron, Ohio, outlined the aviation work being done in his city's schools.

"We have twenty-nine centers in Akron where model building and the rudiments of aviation are taught," Mr. Waterhouse said. "Last year we had 9,279 pupils in those centers and the enthusiasm they showed was astounding. The total cost per pupil was about nine cents, we figured."

Aviation schools, their past activities and the part they will probably play in the civilian training program were discussed by Oliver Parks, president of the Parks Air College in East St. Louis; Casey Jones, head of the school that bears his name in Newark, N. J., and T. Lee Jr. of the Boeing School of Aeronautics at Oakland, Calif.

A midday speech was made by Oswald Ryan, member of the Civil Aeronautics Authority.

Importance of Aviation Stressed

"Aviation is just about the most important thing in the world today, he told several hundred delegates and their guests. "And since the peace of Munich many people have begun to realize it.

Dictator countries who insist that democratic governments and peoples lack the vision and ability to do things on a large scale, like to think we are incapable oof competing with them, he said, but the Civil Aeronautics Act of 1938 is proof that we can do something on a grand scale.

The Federal Government is completing a four-point program to put our aviation on a par with the best, he said. The four objectives are stabilization of the aircraft manufacturing industry; an increase in commercial air transport; encouragement of research, and expansion of private flying.

"There can be no stabilization so long as aviation is a fever chart for national alarms and fears, however, and we must attain stabilization of the domestic market and stabilization and maintenance of a larger export market."

Germany and Italy, he pointed out, have already reached the saturation point so far as their domestic markets are concerned, and are now turning to South America. Their craft criss-cross the continent from coast to coast and from trade center to trade center, and "we're not going to be able to meet the challenge of their attack in South America unless we have an integrated and sustained aviation program."

The convention will close tomorrow after a full session. Brig. Gen. W. G. Kilner, assistant chief of the army air corps, will be one of the chief speakers.

Civil Air Guard Suggested

By The Associated Press.

ST. LOUIS, Jan. 16.—The suggestion that the United States establish something similar to great Britain's "Civil Air Guard" as a buttress to national defense and to catch up with Europe's dictator States in the air was made today before the National Aeronautic Association.

Private fliers, constituting an air reserve force, said Moss Patterson of Oklahoma City, a delegate to the convention, can be made the backbone of the expanded air defense proposed by the Roosevelt Administration.

The aviator has replaced the cowboy and the policeman as the idol of American boyhood, a spokesman for Winthrop Rockefeller told the conference.

Mr. Rockefeller, son of John D. Rockefeller Jr., has partially completed a survey which also credited interest in flying with reducing the number of crimes committed by persons between the ages of 18 and 25.

"So universal is aviation interest in all age groups," reported Ernest Gamache, Mr. Rockefeller's research director, "that we may conclude it ranks No. 1."

He cited a survey by Professors Paul Witty and David Kopel of Northwestern University on youth's interests which showed boys chose aviation as their primary interest "over the traditional cowboys, doctors, soldiers or policemen."

Charles F. Horner, president of the National Aeronautic Association, said that recent criticism of Colonel Charles A. Lindbergh is "pure emotionalism."

"Anybody who knows Lindbergh," Mr. Horner said, "knows that he is not the kind of man to seek publicity, decorations, praise or anything else. I can't find any one who has anything definite to reflect in the slightest of his patriotism and judgment."

"Nobody has made a greater contribution to aviation than Lindbergh."

HONG KONG DEFENSE RUSHED BY BRITAIN

Works Are Pushed by 15,000 Troops to Lessen Weakness in Face of the Japanese

STRESS PUT ON AIRCRAFT

Foreign Trade of the Colony Disrupted by War in China, but Local Prosperity Holds

By HALLETT ABEND

Special Correspondence, THE NEW YORK TIMES

HONG-KONG, Feb. 28.—Although Hong Kong has not been so poorly equipped to repel an armed attack as has Gibraltar, which had only four anti-aircraft guns at the time of the Munich conference last September, this island outpost of imperial Britain has also lagged behind in defense works, and feverish attempts are now being made to make up for lost time.

With the Japanese already in possession of near-by Canton, and with an armed force landed on Hainan Island, which lies across the sea lane from here to the base of Singapore, British naval officials make no secret of their uneasiness, and the British army here, which numbers somewhat less than 15,000 officers and men, spends its days blasting new roads out of the sides of rocky hills, laying concrete gun emplacements and tunneling new cavelike anti-aircraft dugouts and munition chambers.

Hong Kong itself is a mountainous and rocky island, about twelve miles in length and six miles wide. It is particularly vulnerable to attacks from the air, for the water supply comes from reservoirs in the hills, and if aerial bombers scored a few direct hits upon the retaining dams the water reserves would rush downhill into the sea, and Hong Kong would be conquered by thirst within three or four days.

Aviation Plans Rushed

Hence the hasty preparations for enlarging the colony's air force. These preparations include not only new airfields, but the presence here of one British airplane carrier, and the early expected arrival from Singapore of two more such craft.

Already one huge underground hangar has been blasted into the side of a steep mountain, and work is going on for the early completion of two more such shelters for British airplanes. And while as yet more than half the concrete emplacements lack the guns necessary to bring down enemy raiders, a good beginning at acquiring equipment was made late last year, soon after the Japanese capture of Canton, when the British authorities here took over and retained an important shipment of anti-aircraft guns that had been ordered by the Chinese Government.

The defense of Hong Kong will be much more difficult since the Japanese have landed on the Chinese mainland, for besides the island of Hong Kong the British have the Kowloon area, or Leased Territories, under a ninety-nine-year lease from China. Kowloon is on the mainland, and the separating strait is less than a mile wide. The Japanese Army holds Chinese territory from the Leased Territory

business. This has adversely affected banks and shipping and insurance firms, and importers have been forced to grant ruinous extensions of credit to firms in the interior, because of the difficulties of making collections or sending remittances.

Local Prosperity Continues

Hong Kong's local prosperity continues unabated, because of the huge influx of wealthy Chinese from Canton and other cities on the mainland, and trade with smaller South China ports and with French Indo-China has been greatly stimulated. The Hong Kong colonial government's revenues still exceed expenses every month, but gross revenues have begun to decline, and outlays for caring for indigent refugees and for meeting public health problems are on the increase. Shipyards continue to operate at capacity, and have many orders ahead

THIS PAGE IS DECLASSIFIED IAW EO 13526

the early expected arrival from Singapore of two more such craft.

Already one huge underground hangar has been blasted into the side of a steep mountain, and work is going on for the early completion of two more such shelters for British airplanes. And while as yet more than half the concrete emplacements lack the guns necessary to bring down enemy raiders, a good beginning at acquiring equipment was made late last year, soon after the Japanese capture of Canton, when the British authorities here took over and retained an important shipment of anti-aircraft guns that had been ordered by the Chinese Government.

The defense of Hong Kong will be much more difficult since the Japanese have landed on the Chinese mainland, for besides the island of Hong Kong the British have the Kowloon area, or Leased Territories, under a ninety-nine-year lease from China. Kowloon is on the mainland, and the separating strait is less than a mile wide. The Japanese Army holds Chinese territory from the Leased Territory borders to and beyond Canton.

Guerrillas and Bandits Active

Curiously enough, however, there is now no actual military occupation by Japanese along this frontier, except scattered guards along the dynamited and disrupted Canton-Kowloon Railway. The rest of the area is overrun with Chinese guerrillas and bandits. Through the guerrilla lines Hong Kong has again begun selling goods into Chinese territories, and vegetables and livestock reach Hong Kong through these lines. No attempt is made, however, to ship munitions or war supplies for Chinese use across the boundary.

Many machine-gun, anti-aircraft-gun and searchlight emplacements are being rushed to completion along Hong Kong's mainland boundary, which runs through a mountainous country, and here and there barbed wire entanglements are ready to be put into place across flat lands and valleys.

Even on the island of Hong Kong itself double rows of strong barbed-wire entanglements have been completed within the last month, and are now ready to be thrown across several of the highways running onto small flat peninsulas jutting from the island. Evidently the intention is to abandon at once untenable parts of the island, then to close all the highways and rake landing parties with machine-gun fire.

These precautions, in the opinion of foreign military and naval observers, are designed to check any surprise attacks until such time as the British fleet could send assistance from Singapore. The same reliance upon Singapore is evidently planned by the British air force. Airplanes could reach Hong Kong from the Singapore base within twelve hours, and important air reinforcements could quickly follow from Burma and from India.

1,500,000 Gas Masks Ordered

The seriousness with which the general situation is viewed here is shown by the fact that a total of 1,500,000 gas masks have been ordered from England. At present only partial delivery has been made, and Hong Kong today has gas masks sufficient only for the British armed forces and for British civilians.

No distribution of gas masks will be made unless danger arises, for it is feared the tens of thousands of ignorant and penniless Chinese here would not protect the masks, and would even probably sell or pawn them. No discrimination can be made between Chinese and Europeans or Americans, so all must wait.

The ambitious plans for blasting huge caves into the hills for sheltering the civilian residents of Hong Kong have lagged, but many of the most stoutly constructed buildings have been made ready to house thousands of refugees, and can be hermetically sealed against the infiltration of poison gas within a few hours.

The Japanese capture of Canton and Hainan Island, the closing of the Pearl River and the disruption of the Canton-Kowloon Railway have combined to paralyze partly Hong Kong's import and export business. This has adversely affected banks and shipping and insurance firms, and importers have been forced to grant ruinous extensions of credit to firms in the interior, because of the difficulties of making collections or sending remittances.

Local Prosperity Continues

Hong Kong's local prosperity continues unabated, because of the huge influx of wealthy Chinese from Canton and other cities on the mainland, and trade with smaller South China ports and with French Indo-China has been greatly stimulated. The Hong Kong colonial government's revenues still exceed expenses every month, but gross revenues have begun to decline, and outlays for caring for indigent refugees and for meeting public health problems are on the increase. Shipyards continue to operate at capacity, and have many orders ahead.

There is here a growing sentiment against the purchase of Japanese-made goods, and most Japanese stores are without customers. Chinese will not buy from the Japanese stores, and will not knowingly purchase Japanese-made goods from foreign stores.

In addition to this, most Europeans here are now informally boycotting Japanese goods, and one of the leading English-language newspapers last week pointed out editorially that during the last few years Hong Kong had committed "the indefensible folly" of purchasing from Japan goods valued at $151,170,000, in Hong Kong money, while the colony in that three-year period sold Japan goods valued at only $43,451,000.

The editorial said that Japan had probably used this $100,000,000 favorable balance to help wage the war against China and that Hong Kong's purchases would better be made from Britain, where unemployment is large and where the Lancashire mills stand idle, largely because of the competition of Japanese cotton mills. Purchases from Britain in that same period were only $82,905,000, the editorial pointed out, and then concluded:

"Why should we buy Japanese goods when the adverse balance of trade, which we have to cover by exporting bullion, is being turned by Japan into guns and bombs?"

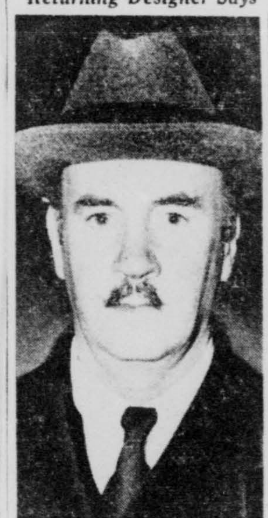
Swatow's Importance Gone

Swatow is no longer an important port of entry for the Chinese, because of the vigilance of the Japanese Navy and because Swatow has no railway running into the interior. Japanese airplanes effectually patrol the one motor highway running westward from Swatow.

Pakhoi is also now nearly useless, both because of the blockade and the Japanese seizure of Hainan Island, and because the Chinese armies, fearing a Japanese landing at Pakhoi, have dynamited roads and bridges on the routes leading inland. Macao, the Portugese harbor near Hong Kong, is useless to the Chinese. The Japanese Army now controls the Macao-Canton highway and other roads from Macao into the interior.

French Indo-China is in a worse position than Hong Kong, so far as defenses are concerned. The French keep only outdated warships in these waters, have few airplanes in Indo-China, have almost no anti-aircraft guns and few coast defense guns and reportedly lack even efficient equipment of mines for guarding their harbors.

Since the Japanese seized Hainan Island, the French have again begun to permit large shipments of munitions, war supplies, gasoline and trucks to go through Haiphong and Hanoi into Yunnan and Kwangsi, and the Haiphong-Kunming Railway, French-owned for its entire length, is carrying full capacity of freight. Two British and two French shipping lines now make regular calls at Haiphong, and many chartered ships put in there. Docking and warehouse space is at a premium, and port receipts have more than doubled.



This is the eighth of a series of articles on conditions in China under Japanese domination.

THE NE'

Our Aviation Equals Any, Returning Designer Says

Times Wide World

Igor Sikorsky

Igor Sikorsky, aircraft designer and manufacturer, who has been in Europe for three months studying aviation developments, returned yesterday on the Bremen of the North German Lloyd Line. He traveled in England, Germany, France and Italy. He declared that in point of quality the United States compared favorably with any European nation in the airplane industry.

Mr. Sikorsky declined to comment on recent reports of German supremacy in military aviation, saying that he did not wish to discuss the question "without careful preparation."

The aviation expert, whose company has submitted plans for a giant transatlantic airliner, said he hoped service to Europe would "be developed soon," and that his company was ready to build a plane for regular service.

"After all," he added, "six days is a lot of time to spend crossing the Atlantic."

He said he would go immediately to Bridgeport, Conn., where he has a factory.

AIR ANNUAL FINDS NATIONS RETICENT

But Jane's Book Shows Italian Bombers of Type Used in Spain Carry Ton Loads

TAIL-FIRST PLANE BUILT

Rome Tests New Craft—Tokyo Craft Pictured, but Details of Them Are Lacking

12/12/38

Wireless to THE NEW YORK TIMES.

LONDON, Dec. 11.—The type of Italian bomber that has been raining death on Barcelona and other Spanish ports can carry more than a ton of bombs each and attain a top speed of 215 miles an hour, according to Jane's All the World's Aircraft, just published.

Although all governments are tending to follow the example set by Russia, Italy and Germany by refusing to publish any details of military machines until they have been used a long time, C. G. Grey, co-editor of the annual, said that the recent crisis had not much affected the book because most new types had been released before the crisis. Nevertheless, he acknowledged that it had been difficult to get some information and experts here agreed that the book told little of the actual performances of most new types.

that they can carry 2,200 pounds of bombs. This type has a range of 1,490 miles and a maximum speed of 292 miles an hour. Dornier has also produced a new seaplane bomber.

Few actual details are given of the Heinkel bomber of the type also used in Spain. However, it is a military version of the Heinkel twin-engined commercial monoplane, which is known to have a maximum speed of 250 miles an hour.

Germany also has two new Junkers bombers. One of these, designed for diving, has three guns and carries bombs underneath. Junkers is also building a military version of its big four-engined commercial monoplane, which can carry forty passengers. This plane is credited by rumor with a maximum speed of 225 miles an hour and a cruising speed of 200.

The book shows a whole page of new Japanese planes, but gives no details whatsoever. Only one of these is a bomber—a twin-engined navy boat with an eighty-two-foot wing and a length of fifty-two feet.

The new Fairey medium bomber is smaller and faster than the Fairey "Battle" and is shown to have a maximum speed of 283 miles an hour. The Fairey "Seafox" catapult reconnaissance plane has a maximum speed of 124 miles an hour and a range of 440 miles. Details are also given of the single-seat Hawker "Hurricane," the ship in which a record from Edinburgh to South England was established. The machine is shown to carry four machine guns in each wing. The maximum speed is given as 335 miles an hour with an ability to climb 20,000 feet in nine minutes.

Hawker also has a new "Hind" day bomber with a maximum speed of 187 miles an hour and an endurance at cruising speed of almost three hours.

Short Brothers' "Sunderland" long-range reconnaissance flying boat is shown to have a span of 112 feet and a length of 85 feet.

than that of the United States, according to S. Paul Johnston, editor of Aviation, who returned yesterday aboard the Italian liner Rex after a five-week trip abroad.

"It seems probable," he said, "that Germany and Italy together would outweigh by a substantial margin the combined air forces of England, France and Russia."

There is little doubt, he held, that at present Germany holds the balance of air power in Europe.

Using ten as the index, he gave the following ratings to the respective air strength of the principal powers: Germany, 10; Italy, 6; Great Britain, 5; the United States, 4, and France, 2.

Mr. Johnson, who visited the air bases in Germany, Italy, England, France and Holland, declared that all of Europe is focusing attention on the development of military aviation on a scale never before attempted.

"Germany," he said, "now has a group of the largest and best equipped aircraft manufacturing plants in the world. Estimates of the personnel engaged range from 150,000 to 200,000. The new Heinkel factory at Oranienburg is probably the largest and best equipped plant for mass production of airplanes in the world, while the huge Junkers plant at Dessau and the Dornier Works at Friedrichshafen are in about the same class."

The situation in Italy is about the same as in Germany but on a smaller scale, Mr. Johnston said. He held that it would take Great Britain another six months, operating on a twenty-four-hour schedule, to begin to match either Germany or Italy.

"In France the situation is much worse than in England," Mr. Johnston declared. "France is a country of little actual production. Under the program of nationalizing aircraft factories in 1936 and in the face of difficult labor situations production has steadily increased.

AIR ANNUAL FINDS NATIONS RETICENT

But Jane's Book Shows Italian Bombers of Type Used in Spain Carry Ton Loads

TAIL-FIRST PLANE BUILT

Rome Tests New Craft—Tokyo Craft Pictured, but Details of Them Are Lacking

12/12/38

Wireless to THE NEW YORK TIMES.

LONDON, Dec. 11.—The type of Italian bomber that has been raining death on Barcelona and other Spanish ports can carry more than a ton of bombs each and attain a top speed of 215 miles an hour, according to Jane's All the World's Aircraft, just published.

Although all governments are tending to follow the example set by Russia, Italy and Germany by refusing to publish any details of military machines until they have been used a long time, C. G. Grey, co-editor of the annual, said that the recent crisis had not much affected the book because most new types had been released before the crisis. Nevertheless, he acknowledged that it had been difficult to get some information and experts here agreed that the book told little of the actual performances of most new types.

The three-engined Savoias have either Alfa-Romeo engines rated at 750 horsepower, or Piaggios rated at 1,000. The loaded weight with the former engines is given as 23,100 pounds and with the latter 24,860. With the Alfa-Romeos the maximum speed at 12,460 feet is given as 270 miles an hour. With the Piaggios the maximum speed at 16,400 feet is given as 295.

Each of these planes carries three machine guns, one fixed to fire forward and two on movable mountings aft of the wings. A fourth can be installed in the rear. Each plane can carry a total bomb load of 2,640 pounds.

The annual also shows that the Savoia-Marchetti company is building seaplanes able to carry twenty-four passengers for an Argentine company for use on South American rivers.

Another new Italian type listed is the experimental "Colibri" tail-first monoplane designed by Quinto Beltrame with a tiny eighteen-horsepower pusher engine. It is contended that the pilot cannot lose flying speed by improper use of the controls.

Italy is also shown to have added a new type of flying boat bomber similar to the Cant Z.501 single-engined boat. The new type is bigger and carries three engines.

Few details are available on the new German types. The annual records a new twin-engined fighter monoplane built by B. F. W.—formerly Messerschmidt—and said to carry two shell-firing guns and six machine guns.

This seems to be a development of Messerschmidt's single-seat fighter monoplane, said to be Germany's best fighter. The annual reveals that this plane had a maximum speed of 310 miles an hour and a range of 373 miles, which means that like similar fast British fighters it could stay in the air only a little more than an hour at maximum speed. The trend to duplicate sea planes and land planes is shown in the announcement that Germany has supplemented a two-seat catapult plane, which can be used for bombing, scouting or torpedoing, with a similar land machine.

Data on Dornier Bombers

The book also gives for the first time the weights of the huge Dornier twin-engined bombers showing that they can carry 2,200 pounds of bombs. This type has a range of 1,490 miles and a maximum speed of 292 miles an hour. Dornier has also produced a new seaplane bomber.

Few actual details are given of the Heinkel bomber of the type also used in Spain. However, it is a military version of the Heinkel twin-engined commercial monoplane, which is known to have a maximum speed of 250 miles an hour.

Germany also has two new Junkers bombers. One of these, designed for diving, has three guns and carries bombs underneath. Junkers is also building a military version of its big four-engined commercial monoplane, which can carry forty passengers. This plane is credited by rumor with a maximum speed of 225 miles an hour and a cruising speed of 200.

The book shows a whole page of new Japanese planes, but gives no details whatsoever. Only one of these is a bomber—a twin-engined navy boat with an eighty-two-foot wing and a length of fifty-two feet.

The new Fairey medium bomber is smaller and faster than the Fairey "Battle" and is shown to have a maximum speed of 283 miles an hour. The Fairey "Seafox" catapult reconnaissance plane has a maximum speed of 124 miles an hour and a range of 440 miles. Details are also given of the single-seat Hawker "Hurricane," the ship in which a record from Edinburgh to South England was established. The machine is shown to carry four machine guns in each wing. The maximum speed is given as 335 miles an hour with an ability to climb 20,000 feet in nine minutes.

Hawker also has a new "Hind" day bomber with a maximum speed of 187 miles an hour and an endurance at cruising speed of almost three hours.

Short Brothers' "Sunderland" long-range reconnaissance flying boat is shown to have a span of 112 feet and a length of 85 feet.

Nothing further is revealed on the Supermarine "Spitfire," said to be the fastest military plane in the world. Some trouble has been met in building these because a subcontractor made wings of the wrong size.

The Russian information is the most meager and no new types are shown. Mr. Grey dismisses Russia with a few paragraphs, saying she was suffering delays in construction and transportation. In the preface he says the Russians are finding it cheaper and simpler to buy licenses and import foreign workers. A Russian fighter of the type used in Spain resembles the Boeing P-26 closely and a Russian bomber of a type seen in the same area resembled the Martin ZKB-26, Mr. Grey says. He draws the conclusion that they are made under either license or agreement.

Mr. Grey finds that France has suffered greatly under her new nationalization of industry and dismisses her types as of little interest.

The annual notes two new Czecho-Slovak types, both carrying shell-firing guns.

Sees Germany Far in Lead

Germany's military strength in the air leads that of the other great powers by a comfortable margin and is two and a half times greater than that of the United States, according to S. Paul Johnston, editor of Aviation, who returned yesterday aboard the Italian liner Rex after a five-week trip abroad.

"It seems probable," he said, "that Germany and Italy together would outweigh by a substantial margin the combined air forces of England, France and Russia."

There is little doubt, he held, that at present Germany holds the balance of air power in Europe.

Using ten as the index, he gave the following ratings to the respective air strength of the principal powers: Germany, 10; Italy, 6; Great Britain, 5; the United States, 4, and France, 2.

Mr. Johnson, who visited the air bases in Germany, Italy, England, France and Holland, declared that all of Europe is focusing attention on the development of military aviation on a scale never before attempted.

"Germany," he said, "now has a group of the largest and best equipped aircraft manufacturing plants in the world. Estimates of the personnel engaged range from 150,000 to 200,000. The new Heinkel factory at Oranienburg is probably the largest and best equipped plant for mass production of airplanes in the world, while the huge Junkers plant at Dessau and the Dornier Works at Friedrichshafen are in about the same class."

The situation in Italy is about the same as in Germany but on a smaller scale, Mr. Johnston said. He held that it would take Great Britain another six months, operating on a twenty-four-hour schedule, to begin to match either Germany or Italy.

"In France the situation is much worse than in England," Mr. Johnston declared. "France is a country of little actual production. Under the program of nationalizing aircraft factories in 1936 and in the face of difficult labor situations production has steadily increased.

Germany, he said, has settled down to normal production with a the eight-hour-shift day in most cases and "is outproducing the world with little effort."

AMERICANS IN CHILE UNEASY ON FUTURE

Businesses Face Possibility of Heavy Taxes or Even More Drastic State Action

POPULAR FRONT IN POWER

New President, However, Held Likely to Adhere to Middle-of-the-Road Policies

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

SANTIAGO, Chile, Dec. 24.—American interests with an investment in this country of something like three-quarters of a billion dollars—second only, in Latin America, to our stake in Cuba—face the possibility of heavily increased taxation, or of even still more drastic action, if the ambitious plans for social reform of the new Popular Front government of Chile, headed by President Pedro Aguirre Cerda, which came into power officially today, are put into effect.

Most of those with whom I have talked about the prospects of such action—both Chileans and Americans—consider it improbable. On the other hand, even when they hold such a view, they cannot help asking themselves where the money is coming from for the financing of the Popular Front program for the betterment of Chile's workers unless from the pockets of foreign investors. Either one or the other—the program or the foreigners—seems sure to suffer.

The new President is backed by a hodgepodge of political elements with conflicting ideals. And, according to which way they make him turn, his course is sure to have an effect, for better or worse, on our huge Chilean investments.

Courses Open to President

If he goes far to the Left—as the extremists of the Popular Front are urging him to do—there may soon be governmental action toward the big and powerful American copper and nitrate companies here along lines similar to those followed by President Lazaro Cardenas of Mexico toward American oil interests in that country.

If he sticks to the middle of the road, shunning both Left and Right turns, Americans here will probably continue to fight successfully against the dire consequences of Chile's 1932 collapse.

If he veers to the Right, joining up with reactionary and other anti-Leftist elements, he may so infuriate Leftist extremists that they may stage a revolt and involve everybody and everything in Chile, including hundreds of millions of American dollars, in one grand, unsettling, profit-devouring, free-for-all fight.

Prophecy just now is at a discount, one may say, nevertheless

a result of the discovery of the synthetic method of extracting nitrogen from the air. This revolutionary development was perfected by the Germans during the World War to such an extent that they struck Chile a blow from which she has never recovered.

Sixty years ago the Chilean nitrate deposits supplied 100 per cent of the wold's needs in nitrogen; after the World War their contribution sank to 8 per cent. Since then the situation has improved somewhat, largely owing to successful working of the deposits and marketing of their yield by Americans.

As for copper, the situation has oscillated between conditions bringing enormous profits to copper-mining interests, notably those financed by American capital, and cataclysmal slumps, which have swept away millions of dollars of American investments. At present both the nitrate and copper businesses in Chile are progressing satisfactorily, though the uncertainty as to how the new government is going to treat foreign investors is clouding their outlook for the future.

Another source of worry for American interests here is the assiduity with which the Chilean dele-

THIS PAGE IS DECLASSIFIED IAW EO 13526

co toward American oil interests in that country.

If he sticks to the middle of the road, shunning both Left and Right turns, Americans here will probably continue to fight successfully against the dire consequences of Chile's 1932 collapse.

If he veers to the Right, joining up with reactionary and other anti-Leftist elements, he may so infuriate Leftist extremists that they may stage a revolt and involve everybody and everything in Chile, including hundreds of millions of American dollars, in one grand, unsettling, profit-devouring, free-for-all fight.

Prophecy just now is at a discount—one may say, nevertheless, for what it is worth, that local betting favors the idea that the new President will stick to the middle of the road.

There are points about his recent record, however—moderate though it has been, in the main—that cause doubts in many minds. Some of his pre-election statements seem to presage trouble for foreign investors—as, for instance, the following, published in the Mercurio, a leading Santiago newspaper, shortly before his election:

"Times have been changing, and there is need of carefully revising the privileges obtained by foreign capital in other days. . . . If it threatens to leave the country, let it!—and the sooner the better! But I do not think that foreign capital invested in concerns extracting products from our soil, especially North American capital, will prove to be stupid and fail to appreciate the times in which we live.

"If it wishes to continue doing business, it must yield wherever yielding is just. No more privileges!—or, if there are to be any, they must be for Chileans. Foreigners engaged in the above-mentioned lines must understand clearly that it is no longer sufficient that they should pay us salaries and a certain degree of tribute.

Want to Share Wealth

"No! We wish to share the wealth which, up to now, they have taken away. Moreover, did not President Roosevelt say a very short time ago that North American capital did not behave well in these countries of ours, and that the time had passed forever when, behind each dollar, well or badly acquired, there were warships and cannon?"

Immediately after these statements, Señor Aguirre added:

"I am an ardent admirer of President Roosevelt. And, with due attention to differences and distances, I think that we Chileans should follow in his footsteps, which are simultaneously both revolutionary and conservative. Not only is Roosevelt a great North American executive but also an eminent example for Latin America."

In dealing with contemplated Popular Front educational reforms, Señor Aguirre also alluded, in his remarks as quoted by the Mercurio, to what he called "stupid commercial schools which manufacture office workers by the gross for foreign merchants."

All this may be construed either as hostility to foreign interests here or as mere pre-election vote-getting violence of language—according to taste. But, taken all in all, these utterances and others resembling them have aroused a slight feeling of uneasiness in the American local business community. Its members are by no means averse to those sections of the Popular Front program that call for betterment of the miserable condition of the Chilean masses—the poverty-stricken "rotos"—but they hope that such betterment may be effected without serious dislocation of business.

Our stake in Chile consists of close to $500,000,000 in direct investments, and—at the highest estimate—about $800,000,000 in direct and indirect investments, taken together. Most of this enormous amount is invested in the copper mines of Northern Chile, which are among the most important in the world, and in the nitrate fields of the same religion.

Both in the copper and nitrate businesses there have been catastrophic happenings within the last quarter of a century—indeed, the latter, which was the mainstay of the entire Chilean economic structure, went completely to pieces as

As for copper, the situation has oscillated between conditions bringing enormous profits to copper-mining interests, notably those financed by American capital, and cataclysmal slumps, which have swept away millions of dollars of American investments. At present both the nitrate and copper businesses in Chile are progressing satisfactorily, though the uncertainty as to how the new government is going to treat foreign investors is clouding their outlook for the future.

Another source of worry for American interests here is the assiduity with which the Chilean delegates to the Eighth Pan-American Conference at Lima worked for the adoption, as an accepted principle of international law on the American continent, of the principle that, in case of confiscation or expropriation of property owned by foreign companies or individuals in any country on that continent, those companies and individuals should have no legal recourse not also available to nationals of the country decreeing such expropriation or confiscation.

Mexican Action Followed

In other words, the Chileans at Lima were fighting against the old idea that foreign investors have special rights—that intervention of the country of which they are citizens is permissible in case they get into a dispute with the country in which they have investments.

The action of the Chilean delegates at Lima also afforded additional proof of the close attention being paid throughout Latin America nowadays to the recent expropriation of American oil interests in Mexico and to the arguments of the Mexican Government in defending its action.

It also clearly expressed the increased antagonism among the Latin Americans to foreign capital invested in their native countries; there is an unmistakable feeling among them that foreign investment tends to exploitation of national resources primarily for the benefit of foreigners, and that, therefore, it should, if permitted, be hedged about in future with regulations precluding the possibility of such exploitation.

The above considerations, coupled with the fact that the new Chilean Government has come into power on the heels of a short but bloody revolt, tends to make local foreigners, including Americans, apprehensive as to just what lies around the corner.

They know that Gustavo Ross, the candidate defeated by Señor Aguirre, on his way from Chile to Europe, talked in Buenos Aires the other day with General Ibáñez, widely suspected of planning to lead the next revolt—if any. General Ibáñez was accused of complicity in the "Nazi" uprising of last September here in Santiago, put down by the Alessandri government (which turned over power to the Popular Front regime this afternoon) after sharp street fighting.

There is a prevailing impression that General Ibáñez is biding his time, that he will closely watch the course taken by the Aguirre government, just installed in office, and take hold of events as the strong military leader, the "Man on Horseback," if and when he deems the time ripe.

In view of all this, local Americans, though not exactly jittery, are just now in a state of watchful—and distrustful—waiting.

This is the eleventh of a series of articles of Mr. Ybarra, who is making a tour of South and Central America.

NAZIS AIM TO SPEED INDUSTRY FOR WAR

Funk's Choice as Commissar to Expand Output Is Move to Raise Fighting Potential

BUSINESS REACTION MIXED

Planned Economy Disliked, Curb on Labor Front Hailed—General 10-Hour Day Due

12/22/38

By OTTO D. TOLISCHUS

Wireless to THE NEW YORK TIMES.

BERLIN, Dec. 21.—The appointment of Walther Funk, the Economics Minister, as commissar for industrial "rationalization and production expansion" is greeted in German business circles with mingled feelings because its implications are so manifold that it is impossible to bring them under one common denominator.

Its primary purpose, of course, is to maintain and increase Germany's industrial mobilization, known as "military economy," in order to maintain and if possible increase her war potential, which is regarded as all the more important in view of the increased efforts being made in the same direction by Great Britain, France and the United States.

It is a maxim of National Socialist political leadership that the best army is useless unless it has behind it an economic production capacity in industry, agriculture and raw material provision able to supply and feed both the fighting forces and the civilian population in time of war.

Four-Year Plan's Function

The creation of such an economic production capacity in all its aspects, and its safeguarding against possible blockade, by means of domestic wartime autarchy and by the organization of Central and Eastern Europe as Germany's economic hinterland, able to supply all still needed imports over Germany's "dry" border, is the function of the Four-Year Plan, for which Field Marshal Hermann Goering remains Chancellor Adolf Hitler's special commissar, and therewith Germany's top economic dictator.

But while the comparatively simple production and marketing processes of the agricultural sector have been put under a rigid organization that functions almost automatically, if not always efficiently, the far more complicated industrial and commercial sectors have thus far eluded the same kind of organization.

Despite all regimentation, there have remained many conflicting ideas and interests and many overlapping and other often competing authorities that have interfered with one another and industrial efficiency.

This became all the more noticeable when German industry attained full production capacity.

On the one hand it started a scramble among individual industries for all available labor and raw materials—made more intense by the decline in foreign trade and inability to pay foreign workers—and on the other produced a similar race between the State and labor for a share in industrial profits until production costs began to mount and industrial profitableness—never very high under the existing control—began to go down.

In this situation the National Socialist regime faced the alternative of permitting regulation by the free interplay of price and wage factors, which would have marked the end of controlled economy, or regulation by governmental fiat, which meant more control.

As plainly shown by the terms of Herr Funk's appointment, it chose the latter alternative, under the designation of "totalitarian national economy."

In that sense, therefore, Herr Funk's new appointment signifies a further step toward a planned and centrally directed economy along the path already trod by Russia. As such it is far from being welcome to German business circles, which look with grave concern into a future that seems to have the word "socialization" written all over it.

But there is another side to this appointment that holds out many compensations.

It will be Herr Funk's task "to increase Germany's economic strength by the improvement of industrial plants' production means and production methods as well as by an increase in the production capacity of everybody active in German economy."

For that purpose he is empowered to issue binding instructions to all the agencies concerned in this task, including not only economic and industrial organizations and interests but also the National Socialist party and its associated organizations, to which belongs the German Labor Front—the one big labor union in Germany.

Two Important Aspects

This has two important aspects. First, by the nature of the situation, Herr Funk's executive organization will have to be the "organization of industrial and commercial self-administration" already in existence, which means that while under the aegis of Marshal Goering and the Four-Year Plan Herr Funk will issue orders, the industrial and commercial organizations representing industry and commerce will actually administer them.

It is significant that some time ago all officials in these organizations were made subject to the National Socialist party's approval; despite this, the real interests of industry and commerce are now expected to have a better chance to assert themselves than heretofore and to disregard the numerous extraneous authorities that tried to subordinate them to purely political and often purely local or organizational interests.

Even more important is the fact that the German Labor Front, which heretofore has pursued an independent policy and has particularly collected increasing "voluntary" social welfare contributions from industry over and above the heavy legal social insurance levies, is likewise placed under Herr Funk's control.

This step is so drastic that in inspired comments the workers are assured that the excellent relations between Herr Funk and Dr. Robert Ley, leader of the Labor Front, guarantee frictionless cooperation.

General Ten-Hour Day Seen

Perhaps the most important development expected to result from this new control is formal abolition of the eight-hour day and the general introduction of the ten-hour working day already effective in the armament and other nationally urgent industries.

MAJ. ELIOT DOUBTS REICH AIR MASTERY

12/17/38

German Aviation Has Become a Sort of 'Instrument of Blackmail,' He Writes

BRITISH AIR FORCE PRAISED

French Army Seen as the Best in Europe — Nazis Held Unable to Withstand Its Attack

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 18. — The present numerical air superiority of Germany is challenged by Major George Fielding Eliot, writer on military affairs, in the Dec. 15 issue of the Foreign Policy Association's Reports, made public today. He observed, however, that the German air force has become a sort of "instrument of international blackmail."

"It is difficult to believe that Germany has created a first-line air force of 10,000 planes, all organized and ready to take off," Major Eliot wrote.

He pointed out that in the Fall of 1935 only 108 planes could be shown by the Nazis at their Nuremberg parade. He estimated that Germany's first-line planes in April of this year numbered about 1,620, and stated that the Reich admits only 3,000 of such planes, including the squadron reserves.

French Army Held Best

"To maintain any such strength as 10,000 planes merely assures a vast waste of precious material which Germany, certainly, cannot afford," he wrote. "Unless a nation is deliberately building against a prearranged date at which it intends to begin war it is unwise to assemble any great number of planes in the present state of aeronautical science; for planes are being improved so rapidly that today's miracle is obsolete tomorrow."

Holding that France "still has the most formidable and best army in Europe," Major Eliot expressed doubt whether in the present state of German arms the Nazi State could withstand the shock of French attack.

While disputing Germany's numerical superiority in the air, Major Eliot granted that so far as integrated industrial production of planes is concerned, Germany "with its state-controlled, integrated economy commanding every detail—labor, distribution, production, management—has contrived to gain superiority over Britain and France in the air."

"Air staffs estimate," he added, "that plane losses might be as high as 90 per cent in the first thirty days of conflict. Obviously, therefore, any continuity of effort would be entirely dependent on the ability to replace those losses rapidly; an industry able not only to do that, but to add new squadrons to the original strength, would give its possessor a great margin over an opponent not so equipped."

He said that France's greatest concern was over man power, since it has a declining birthrate and a population of only 42,000,000 as against Germany's population of about twice that number when the 10,000,000 Austrians and Sudeten Germans are added to the 68,000,000 population of Germany proper.

Italy "Economically Weakest"

Germany's objective was described as "expansion both in Europe and overseas," in contrast to the French objective of security. He described Italy was "economically the weakest" of the European powers and doubted whether it would play a major role in Europe after Munich.

Discussing what the democracies can do about Germany's industrial superiority, Major Eliot said:

"This efficiency the democracies can offset only by education—the creation of an enlightened public opinion which will support the necessary measures for the safety of the state. These measures may, to some degree, bring about in the democracies a centralization of power with resulting limitations on individual rights heretofore held inviolate."

British Air Force Praised

WASHINGTON, Dec. 18 (AP).—Major George Fielding Eliot, writing for the Foreign Policy Association, said that Britain's air force, "all things considered, is probably the most formidable air arm in Europe—at the outset of any war."

"In training, equipment, command and tactical doctrine it stands very high," he explained. "It's weakness lies in the inability of British industry, without more 'controls,' to replace its planes as rapidly as the integrated German industry can replace German losses."

France, in five years, has sunk from first to sixth place in air power, Major Eliot asserted.

Reviewing the post-Munich military situation, Major Eliot said Germany has become the dominant power in Central Europe, forcing France to revise its military strategy, and compelling Britain to speed up its rearmament program.

"Germany's objective, in contrast to the French idea of security, is expansion," he said. "Its aim is to become blockade-proof, and it hopes that its air power will to some extent offset the British fleet."

Major Eliot said that the military outlook of Britain, after Munich, is one of dark forebodings.

Pictures of Nazi Leaders Are Exempted From Lien

Paintings and pictures of Nazi leaders belong to the German home and are therefore exempt from lien, according to a decision of the Court of Neubrandenburg, Germany, as reported yesterday in a special Berlin dispatch to the Staatszeitung und Herold, German language daily of New York.

The ruling was made in the case of a German debtor, one of whose possessions was an oil painting of Field Marshal Hermann Goering, valued at "30 to 50 marks," that he had won in a shooting gallery. The court ruled that his creditor could seize other of his possessions, except the paintings, because "in the leader State the confidence and belief in its leaders must be furthered."

The verdict as published in the judicial record states that it is "essential that in each German apartment pictures of leading men shall be hung."

Reich Claims Bomber Goes 323 Miles an Hour

Wireless to THE NEW YORK TIMES.

DESSAU, Germany, March 20.—A new record for planes with a 4,400-pound payload over a 621-mile circuit was claimed here today for the newest bomber. A twin-motored Junkers yesterday averaged 323 miles per hour over the circuit from the Nessau Junkers works to Zugsspitze and return, it was reported.

The new bomber, an all-metal, low-wing monoplane, is powered with two Junkers Jumo-211 motors and equipped with fully automatic, variable-pitch propellers. Gasoline-burning Jumos develop 1,200 horsepower each. The variable-pitch propellors are of the latest Junkers design.

The new record, if confirmed, will exceed by more than twenty-six miles an hour the previous Italian record of 296 miles an hour set by a tri-motor Savoia.

7,000 WAR PLANES A YEAR AVAILABLE

Louis Johnson Says Nation's Air Industry Can Meet Full Defense Demands

By FREDERICK P. GRAHAM
Special to THE NEW YORK TIMES.

ST. LOUIS, Jan. 17.—Louis Johnson, Assistant Secretary of War, told the closing session of the seventeenth annual convention of the National Aeronautic Association that leaders of the aviation industry in this country had assured him that they could meet the demands of an air defense program which would put our nation beyond fear of attack by hostile forces.

"We have an aviation industry with a capacity to meet all of our immediate and many of our future needs," he said. "Its leaders have assured me that with due and proper allowance for enlarged commercial production they can produce more than 7,000 military planes and more than 16,000 military engines a year without undue expansion."

He declared that the proposed air program was not based on terms of "magic numbers or on formulae, but rather upon the defensive needs of the country."

"Two months ago I told a Boston audience," he went on, "that to meet the tremendous pace that the rest of the world is setting we must double, yes, treble and perhaps even quadruple our present air force with the best planes that can possibly be produced. On that day our army air corps had less than 1,800 planes.

Sets Goal of 5,400 Planes

"With the $300,000,000 that the President proposes to put at the disposal of the army for aviation purposes, we should treble our regular force of that day. Whether we will ultimately have to quadruple it depends on many factors upon which we in America don't have the final say."

There is much unused capacity in the aviation industry today, Mr. Johnson said, and production could easily be geared up.

The President's program, he de-

7,000 WAR PLANES A YEAR AVAILABLE

Louis Johnson Says Nation's Air Industry Can Meet Full Defense Demands

By FREDERICK P. GRAHAM

Special to THE NEW YORK TIMES.

ST. LOUIS, Jan. 17.—Louis Johnson, Assistant Secretary of War, told the closing session of the seventeenth annual convention of the National Aeronautic Association that leaders of the aviation industry in this country had assured him that they could meet the demands of an air defense program which would put our nation beyond fear of attack by hostile forces.

"We have an aviation industry with a capacity to meet all of our immediate and many of our future needs," he said. "Its leaders have assured me that with due and proper allowance for enlarged commercial production they can produce more than 7,000 military planes and more than 16,000 military engines a year without undue expansion."

He declared that the proposed air program was not based on terms of "magic numbers or on formulae, but rather upon the defensive needs of the country."

"Two months ago I told a Boston audience," he went on, "that to meet the tremendous pace that the rest of the world is setting we must double, yes, treble and perhaps even quadruple our present air force with the best planes that can possibly be produced. On that day our army air corps had less than 1,800 planes.

Sets Goal of 5,400 Planes

"With the $300,000,000 that the President proposes to put at the disposal of the army for aviation purposes, we should treble our regular force of that day. Whether we will ultimately have to quadruple it depends on many factors upon which we in America don't have the final say."

There is much unused capacity in the aviation industry today, Mr. Johnson said, and production could easily be geared up.

The President's program, he declared, should bring not only a welcome boom to the aviation industry, but should provide a great opportunity to train additional skilled workmen.

"Every phase of the industry should benefit," he continued. "Small factories, as well as large establishments, should gain helpful experience. If an emergency should require mass production of planes, parts and accessories, I hope that we will be able to turn to the aviation industry for all of our needs. I trust that we will not have to call upon the automobile industry for help.

"The European nations which in the last few years turned to motor factories to make airplanes signally failed to realize their aviation progress."

Pilot Training Discussed

In referring to the proposed civilian training program, Mr. Johnson said:

"The War Department is grateful for the emphasis that the Civil Aeronautics Authority has placed upon the training and the develop-

Continued on Page Twenty

THIS PAGE IS UNCALSSIFIED

7,000 WAR PLANES A YEAR AVAILABLE

Continued From Page One

ment of civilian pilots. Its program is already under way. It has begun modestly. In time we hope it will produce 20,000 pilots a year. Out of this coterie of intelligent, enthusiastic, air-minded young pilots will come a preponderant number of fliers in any emergency."

The army, navy and CAA and all other related agencies of the Federal Government are working together on a sound program for American aviation, he asserted, and this program will strengthen industry, benfit labor and, above all else, bring us greater protection and peace of mind in a world that is disturbed by wars and threats of wars.

Speaking in place of his chief, Brig. Gen. Walter G. Kilner, assistant chief of the Army Air Corps, discussed earlier in the day the need for adequate technical aeronautical development.

Mere number was not the best basis of comparing air strengths, he said, adding that one of the most important factors making for a strong military air force was the quality of its aircraft. Quality, he asserted, results from complete and continued technical research and development.

He quoted from a statement made a year ago by the late Chief of the Army Air Corps, General Oscar Westover, that there was ample evidence that several foreign powers would soon outstrip us in the field unless aviation agencies in the United States "doubled the funds spent of late for experimentation and research."

Plan to Stimulate Research

No major change in the assignment of development functions among the agencies in the United States primarily concerned with research work was necessary or desirable, he declared. There were today about thirty scientific organizations concerned with aeronautical development, he added, and closer cooperation and more effective control by some directing head would serve to lift both the quality and scope of their work.

Major A. D. McMullen of the airport section of the technical development division of the CAA, told another session of the convention that additional airports were needed throughout the country. He said he was unable at this time to reveal details of the CAA report on airports, which will be submitted to Congress not later than Feb. 1, but could say that airport and hangar facilities lag far behind the development of airplanes.

There are about 64,000 acres in the 203 existing scheduled airline terminals, he reported, adding that this was about the equivalent of a 25-foot road 2,100 miles long. To make those terminals adequate in area alone, he said, would mean the addition of about 1,100 miles to make the total equal about the distance from New York to San Francisco.

Existing hangar space in these airports is about fifteen times the space in the Commerce Department building in Washington, according to his comparison. Immediate requirements would increase the hangar space about one-fourth.

Youth Program Announced

The final draft of the National Aeronautic Association's youth training program was announced by Charles F. Horner, president of the association.

It envisages the use of the public schools, civic and recreational organizations and aeronautical groups. It is hoped to give children from the age of 10 to 18 years training in the rudiments of mechanical flight. Between 17,000,000 and 20,000,000 boys and girls will take the courses, if the aims of the program materialize. Similar courses are now a regular part of the training in all German schools, Mr. Horner said, and although a majority of the children may never be able to fly or work as skilled mechanics, a vast reservoir of pilot and technical personnel is made available for an emergency.

The final business of the three-day meeting was the election of officers. Mr. Horner, Secretary William Enyart, also of Washington, and Treasurer John H. Jouett of New York were re-elected. George Logan of St. Louis was elected to the vice presidency formerly held by E. E. Aldrin. Orville Wright, Godfrey L. Cabot, Louis Inwood and Bernarr Macfadden were re-elected governors at large and Carl Squier was elected to replace Fred C. Crawford on this board. Howard Knotts, World War ace, was appointed general counsel.

NEW REICH AIR FLOTILLA

Gen. Loer Gets Command of the Fourth German Unit

Wireless to THE NEW YORK TIMES.

BERLIN, March 20.—The establishment of "Air Flotilla 4" for Bohemia, Moravia, Austria and part of the Sudetenland was announced today by Field Marshal Hermann Goering, Air Minister.

Lieut. Gen. Alexander Loer, head of the air forces in Austria, a veteran of the old Austro-Hungarian Army and one of the men responsible for building the former Austrian air force, has been promoted to the rank of general and command of the new flotilla has been given to him.

The announcement stated that the "creation of Air Flotilla 4 means a further increase in the strength of the German air force, which exceeds appreciably past construction intentions."

VAST ARMS OUTLAY IS FIXED BY ITALY

Budget Shows 8,275,000,000 Lire for Military—Deficit of 4,755,000,000 Lire Seen

By ARNALDO CORTESI
Wireless to THE NEW YORK TIMES.

ROME, Dec. 14.—The State budget for the next fiscal year—July ' 1939, to June 30, 1940—will cl with a deficit of 4,755,000,000 l according to estimates approve the Cabinet this morning.

This represents a marked re sion from the estimates appro year ago for the present fiscal which was expected to close June 30 with a surplus of 37,000 lire.

The foreseen deficit for next year results from increasing expenditures and shrinking revenues. Compared with figures for the present fiscal year, an increase of 17 per cent in expenditures is foreseen, along with a 2-per-cent decrease in revenues. The increased expenditures are easily accounted for, being due principally to heavier commitments for military purposes, but no explanation for the decreased revenues is given in the official statement on the budget.

[The Cabinet communiqué said that speeding up of the military program was "an unavoidable necessity in view of the situation," The Associated Press reported. The whole budget totals 29,316,008,926 lire, an increase of 4,280,902,000 lire over the current one.]

Increase for Every Ministry

Every Ministry shows increases in expenditures. These range from 2 per cent for the Ministry of the Interior to 110 per cent for the Ministry of Corporations.

The most important increa however, are for the three mili Ministries, which expect to s an aggregate of 2,485,000,000 more than during the present This sum is officially explaine the first installment of an a priation of 10,000,000,000 lir armaments to be spread over f years.

The total expenditures for the three Ministries are estimated at 8,275,000,000 lire, or slightly more than 33 per cent of the entire State revenues.

The foreseen expenditures of the three military Ministries compare with those of the present year as follows:

Ministry	1938-39	1939-40.	Percentage increase.
War	2,591,000,000	3,406,000,000	31
Navy	1,934,000,000	2,740,000,000	40
Air	1,265,000,000	2,165,000,000	75

The increase in the Air Ministry's budget is particularly noteworthy. It is evidence of the particular care that the Italians are bestowing on development of the air arm.

against another.

DAY BY DAY PROGRESS AT LIMA

UNITY PACT RUSHED FOR LIMA PARLEY

Stand Against Non-American Penetration Possible Today With Argentina's Backing

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 11.—Undercover efforts to achieve from the Pan-American Conference a positive and unanimous stand against non-American military, political and economic aggression are expected to reach a crucial stage tomorrow. The deadline is supplied by the 3 P. M. departure set for Foreign Minister José Maria Cantilo of Argentina.

A volunteer committee of draftsmen representing three or four delegations was working tonight to perfect the text of a declaration to which he would subscribe. The haste is due to a fear of possible subsequent complications if the Argentine Foreign Minister, who is not included in his country's official delegation, must be asked to deal with a vexatious question of policy by cable. It is considered almost indispensable to win his personal approval before he leaves aboard the cruiser that brought him.

The current discussion started when Secretary of State Cordell Hull of the United States showed Dr. Cantilo the United States draft of a proposed convention to strengthen the 1936 Buenos Aires agreement saying a threat to the peace of any American nation is of concern to all the republics.

Intended as Basis for Talks

Like other contents of the brief cases of the United States delegates the draft convention was not intended to be offered officially for action at the conference, but merely to serve as a basis for the informal discussions that Mr. Hull likes as a means of advancing large ideas without subjecting them to the long-distance oratory of the floor of the conference. In the same category is the draft of a pact wrapping up all the existing pan-American peace machinery in one instrument—another thorny subject that the conference may take up.

However, Mr. Hull attracted considerable interest by displaying the United States experts' draft to the chiefs of delegations in the course of their formal calls immediately after his arrival. Dr. Cantilo said at once that Argentina was not interested and buttressed this point of view in yesterday's speech declaring that no new pacts were needed to continue the good relations and safety of this hemisphere.

One of those most interested in Mr. Hull's draft, however, was Dr. Francisco Castillo Najera, Mexico's Ambassador to the United States and her chief delegate here, and he undertook to convert Dr. Cantilo to the desirability of making a more concrete gesture than merely saying that everything in the Americas was all right as is.

Dr. Cantilo still resolutely opposed the convention. It was then suggested that a simple declaration, if adopted unanimously, might make the requisite effect on world opinion without entailing the cumbersome processes of legislative ratification.

Finally Dr. Cantilo agreed in prin-

UNI[illegible]USHED FOR LIMA PARLEY

Continued From Page One

ciple. Mr. Hull had no objections, since he was interested mainly in the idea, not in the form of presentation.

It was believed yesterday morning that satisfactory language had been evolved, but by nightfall the Argentines found it would not do, and the draftsmen restarted their work. The result of their session tonight will be offered for consideration to an informal gathering of interested delegates tomorrow morning and then to Dr. Cantilo.

The United States delegation is unwilling to indicate the exact nature of its draft and inclines to the position that the matter is now out of its hands. The Mexicans and Central Americans believe the conference must achieve something of this nature to justify itself.

The discussions have been so highly informal, not to say secret, that it is impossible to learn the names of many of the participants. Mr. Hull and Adolf A. Berle Jr., Assistant Secretary of State, appear to have handled the United States participation to the limited extent that it has taken place. This method of operation is as native to Pan-American conferences as to any other kind of gathering of politicians.

At Buenos Aires the United States draft of a collective security pact was quietly sabotaged into a general declaration that a threat to the peace of the Americas would bring about unspecified consultation. It is this original idea that it is hoped to develop into useful form, putting twenty-one republics on record as to the exact form that their combined resistance would take.

On this and other controversial issues Mr. Hull is well pleased that others take the initiative, since thus there is less chance of questioning the motives of the United States.

Thus far Brazil, which was a stanch ally of the United States at Buenos Aires, appears to be taking little part in the negotiations. It was assumed that her interests would, as usual, lie parallel to those of the United States. The work of reconciling the Argentine and North American points of view seems to have fallen into the hands of honest brokers in the persons of Dr. Castillo Najera and others, who are trying to iron out differences in favor of a general understanding.

As far as can be learned, Dr. Cantilo has not made clear Argentina's objections except on the familiar ground of his country's inseparable economic community of interest with Europe, especially Britain. It is evident that this time, as before, Argentina will strenuously oppose any action tending to set off the Americas as a separate part of the world potentially antagonistic toward Europe.

The United States draft apparently did not go so far as to suggest military arrangements, but was intended to imply absolutely united action on all fronts in the event of non-American menace. Argentina objected to the use of the word "non-American," and the draftsConference tonight a strong project for continental security to protect the Western world from outside aggression.

At the same time the Brazilian delegation prepared a declaration serving notice that minority status would be given no group of foreigners in the Americas and ruling out such internal issues as were used against Czecho-Slovakia.

The Venezuelan project cont[illegible] an elaborate formula for ascert[illegible]ing an aggressor, provides for [illegible]mediate consultations among t[illegible] American States in the event [illegible] aggression and proposes supple[illegible]mentary accords for assistance.

"The moment demands that we undertake examination of the prob[illegible]lem of continental security," declares the Venezuelan plan. "Without exaggerating future dangers which might menace the American countries, and without sowing suspicions founded on events in other parts of the world, for America the moment has arrived to think and work continentally, to unify its action and its methods of defense in the face of emergencies that might arise."

The proposal will be considered by the conference's Committee on Organization of Peace, to which Alfred M. Landon was named as the United States representative today by Secretary of State Cordull Hull.

Around the project may revolve discussion of what procedure the American States will take in regard to President Roosevelt's idea of continental defense.

The Venezuelan proposal says that "the definition of aggression, prevention of aggression and defense against aggression must be the basis of a system of collective assistance in America." Declaring that every attack from without against the existence, integrity, territory or independence of an American State is a threat to American solidarity, the plan defines as an aggressor any State adjudged guilty of the following:

A. Recourse to force in violation of obligations to submit differences to juridical procedure.

B. Declaration of war on one of the signatory States.

C. Invasion by armed forces, without a declaration of war, of the territory of one of the signatory States.

D. Attack with land, naval or aerial forces, without a declaration of war, on the territory, ships or airplanes of any of the signatory States.

E. Naval blockade of the coasts or forts of one of the signatory States.

F. Support given armed bands which from its territory have invaded the territory of one of the signatory States, and refusal, notwithstanding the demand of the State invaded, to adopt on its own territory means in its power to deprive such bands of its protection.

The proposal also declares that in the event of aggression "on the part of a North American State" the signatories will consult on what measures should be taken.

BRAZILIAN DECLARATION

The Brazilian declaration against any minority claim read:

The American republics, wishing to avoid any doubt referring to the conception of national, ethnical, linguistic and religious minorities in the sense given them by treaties after the Great War of protection for such minorities cannot be applied in America, where psychological, social and historical conditions already exist which give their own character to human groups to which such are given;

Having in mind that immigrants admitted to one State cannot claim title to a minority because they are mere foreigners in the territory where they live, and when they do not incorporate themselves into a new nationality will individually enjoy rights generally assured foreigners;

Hereby declare they do not admit the claims and any rights, privileges or special guarantees for any human group different from the general mass of national population and considered as collective entities.

The Brazilian delegation was understood to have been inspired by fears caused by the existence in Brazil of a minority movement among the German population of Rio Grande do Sul and Santa Catharina. In those States, it was pointed out, there are communities where only the German language is spoken. There are approximately 500,000 Germans in Rio Grande do Sul alone.

It was learned that Brazilian authorities had requisitioned recently a number of propaganda maps of Rio Grande do Sul showing colored areas where the German minority claimed special privileges.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Continued From Page One

ciple. Mr. Hull had no objections, since he was interested mainly in the idea, not in the form of presentation.

It was believed yesterday morning that satisfactory language had been evolved, but by nightfall the Argentines found it would not do, and the draftsmen restarted their work. The result of their session tonight will be offered for consideration to an informal gathering of interested delegates tomorrow morning and then to Dr. Cantilo.

The United States delegation is unwilling to indicate the exact nature of its draft and inclines to the position that the matter is now out of its hands. The Mexicans and Central Americans believe the conference must achieve something of this nature to justify itself.

The discussions have been so highly informal, not to say secret, that it is impossible to learn the names of many of the participants. Mr. Hull and Adolf A. Berle Jr., Assistant Secretary of State, appear to have handled the United States participation to the limited extent that it has taken place. This method of operation is as native to Pan-American conferences as to any other kind of gathering of politicians.

At Buenos Aires the United States draft of a collective security pact was quietly sabotaged into a general declaration that a threat to the peace of the Americas would bring about unspecified consultation. It is this original idea that it is hoped to develop into useful form, putting twenty-one republics on record as to the exact form that their combined resistance would take.

On this and other controversial issues Mr. Hull is well pleased that others take the initiative, since thus there is less chance of questioning the motives of the United States.

Thus far Brazil, which was a stanch ally of the United States at Buenos Aires, appears to be taking little part in the negotiations. It was assumed that her interests would, as usual, lie parallel to those of the United States. The work of reconciling the Argentine and North American points of view seems to have fallen into the hands of honest brokers in the persons of Dr. Castillo Najera and others, who are trying to iron out differences in favor of a general understanding.

As far as can be learned, Dr. Cantilo has not made clear Argentina's objections except on the familiar ground of his country's inseparable economic community of interest with Europe, especially Britain. It is evident that this time, as before, Argentina will strenuously oppose any action tending to set off the Americas as a separate part of the world potentially antagonistic toward Europe.

The United States draft apparently did not go so far as to suggest military arrangements, but was intended to imply absolutely united action on all fronts in the event of non-American menace. Argentina objected to the use of the word "non-American," and the draftsmen have been trying to find a generalized synonym that will not point definitely at Europe.

Dr. Castillo Najera is likely to be chairman of the Committee on Maintenance of Peace, which will handle the most important projects of the conference, and hence his interest is understandable. Should a satisfactory declaration of the kind being sought be evolved, it will probably be introduced to the peace committee in the name of a delegation other than that of the United States, but only after unanimous support has been assured. This technique was followed at the Montevideo and Buenos Aires conferences.

Dr. Castillo Najera at one point informed Mr. Hull that if a convention was insisted upon instead of a simple declaration, Argentina and Uruguay would vote in the negative, as would, probably, Paraguay, Bolivia and Chile. It was decided that a solidarity vote carried by 16 to 5 would have no appreciable effect on world opinion.

Venezuela Offers Security Plan

LIMA, Peru, Dec. 11 (P).—Venezuela laid before the Pan-American

serving notice that minorit, would be given no group of f ers in the Americas and rulin. such internal issues as were against Czecho-Slovakia.

The Venezuelan project con: an elaborate formula for ascert. ing an aggressor, provides for . mediate consultations among American States in the event aggression and proposes supplc mentary accords for assistance.

"The moment demands that w undertake examination of the prol lem of continental security," de clares the Venezuelan plan. "Without exaggerating future dangers which might menace the American countries, and without sowing suspicions founded on events in other parts of the world, for America the moment has arrived to think and work continentally, to unify its action and its methods of defense in the face of emergencies that might arise."

The proposal will be considered by the conference's Committee on Organization of Peace, to which Alfred M. Landon was named as the United States representative today by Secretary of State Cordull Hull.

Around the project may revolve discussion of what procedure the American States will take in regard to President Roosevelt's idea of continental defense.

The Venezuelan proposal says that "the definition of aggression, prevention of aggression and defense against aggression must be the basis of a system of collective assistance in America." Declaring that every attack from without against the existence, integrity, territory or independence of an American State is a threat to American solidarity, the plan defines as an aggressor any State adjudged guilty of the following:

A. Recourse to force in violation of obligations to submit differences to juridical procedure.

B. Declaration of war on one of the signatory States.

C. Invasion by armed forces, without a declaration of war, of the territory of one of the signatory States.

D. Attack with land, naval or aerial forces, without a declaration of war, on the territory, ships or airplanes of any of the signatory States.

E. Naval blockade of the coasts or forts of one of the signatory States.

F. Support given armed bands which from its territory have invaded the territory of one of the signatory States, and refusal, notwithstanding the demand of the State invaded, to adopt on its own territory means in its power to deprive such bands of its protection.

The proposal also declares that in the event of aggression "on the part of a North American State" the signatories will consult on what measures should be taken.

BRAZILIAN DECLARATION

The Brazilian declaration against any minority claim read:

The American republics, wishing to avoid any doubt referring to the conception of national, ethnical, linguistic and religious minorities in the sense given them by treaties after the Great War of 1914-18 and other treaties and international declarations whose provisions placed this matter under the guarantee of the League of Nations;

Having in mind that the system

LIMA BLOC FIGHTS 'SOLIDARITY' PLAN

Fear of Economic Reprisal by Germany Draws Five to Argentina's Side

CUBA BACKS U. S. DRAFT

Insists on Action Even if Hull Drops Project for Sake of Conference Unanimity

12/13/38

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 12.—The possibility of economic reprisals by Germany was indicated in informal discussions by delegates here today to be a leading factor in South American opposition to all proposals before the Pan-American Conference tending to solidify American sentiment or action in a manner that could be interpreted as anti-European.

Brazil and Chile, which carry on a large trade with Germany, have definitely joined the Argentine orbit in opposition to the Central American nations and Cuba, Columbia and Venezuela, who are supporting the idea of the United States to achieve a positive front against the military, economic and ideological invasion of this Hemisphere. Bolivia, Paraguay and Uruguay also may join the do-nothing camp.

Because of the insistence of Secretary of State Cordell Hull that the conference shall consider officially only matters that are unanimously supported, these six countries constitute a bloc sufficiently strong to embarrass seriously any attempt to strengthen the provision of the Buenos Aires [Argentina] pact that any extra-American threat to the peace of any American republic is of concern to all and justifies immediate consultation among them.

Times Wide World

HEADS PEACE GROUP

Dr. Afranio de Mello Franco of Brazil, who has been elected president of the Commission for Organization of Peace of the Pan-American Conference at Lima.

Diez de Medina of Bolivia; vice chairman, Manuel Cordero Reyes of Nicaragua.

Reports—Chairman, Julio Pastor Benitez of Paraguay; vice chairman, Manuel J. Sierra of Mexico.

In an effort to speed up the conference work, the steering committee was summoned late today to meet early tomorrow morning. This committee, consisting of the chairmen of the twenty-one delegations, is the most powerful of the conference.

Chile Has Plan for Peace in Spain

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Dec. 12.—The Chilean delegation to the Lima conference will present a motion proposing a collective effort by the twenty-one American Republics to end the Spanish civil war, it was stated this afternoon at the Foreign Ministry.

It was said the decision to bring the matter up during the conference was adopted after consultation among delegations, which showed opinion favorable.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

among them.

Hull Reticent on U. S. Draft

Mr. Hull is reticent concerning the United States' draft of a unity plan, which started the present discussion, since it was intended only as a memorandum representing the idea of our experts on how to approach the subject. A volunteer committee is still trying to draft a satisfactory declaration, to take the place of the convention Mr. Hull had in mind, but Jose Maria Cantilo, the Argentine Foreign Minister, who is the principal opponent of any action of that sort, left today for Buenos Aires without expressing approval of any version.

The probabilities now are that a solidarity declaration will be based on that portion of Señor Cantilo's speech last Saturday in which he said:

"Each and all of us are ready to maintain and prove this solidarity in the face of danger, regardless of whence it comes and regardless of which State in this part of the world it is whose independence is threatened. For this we do not need any special pacts.

"A pact has already been made in our history. We shall act with one common impulse, wiping out all frontiers and using only one flag, that of liberty and justice."

Whether this is an improvement on the less oratorical and more business-like formula enunciated at Buenos Aires two years ago under less menacing world conditions is a question of debate among many delegates. A spokesman for the Cuban delegation said today that he and others on the positive-action side were determined to press for the original draft of the United States, even if Mr. Hull should prove willing to drop the idea in favor of the Argentine cooperation proposal, as now seems to be the case.

Cubans Irked by Rebuff

The Cubans are aggrieved because Argentine opposition has stymied their pet proposal to have the conference go on record condemning racial persecution. They offered a draft resolution to an executive meeting of the steering committee Saturday, but action was indefinitely deferred.

The Cubans want the conference to declare in a formal resolution "that it repudiates all persecution of a collective character because of racial or religious motives which places a substantial number of human beings in a material situation in which it is impossible for them to live honorably and to carry on their activities within a minimum standard of dignity."

"In making this solemn declaration," their draft reads, "it is implied that the nations of America assume the moral obligation to continue to apply as heretofore the principles of tolerance and respect for human dignity, and an invitation is hereby tendered to all countries not represented at the Eighth

THIS PAGE IS DECLASSIFIED IAW EO 13526

as a memorandum representing the idea of our experts on how to approach the subject. A volunteer committee is still trying to draft a satisfactory declaration, to take the place of the convention Mr. Hull had in mind, but José Maria Cantilo, the Argentine Foreign Minister, who is the principal opponent of any action of that sort, left today for Buenos Aires without expressing approval of any version.

The probabilities now are that a solidarity declaration will be based on that portion of Señor Cantilo's speech last Saturday in which he said:

"Each and all of us are ready to maintain and prove this solidarity in the face of danger, regardless of whence it comes and regardless of which State in this part of the world it is whose independence is threatened. For this we do not need any special pacts.

"A pact has already been made in our history. We shall act with one common impulse, wiping out all frontiers and using only one flag, that of liberty and justice."

Whether this is an improvement on the less oratorical and more business-like formula enunciated at Buenos Aires two years ago under less menacing world conditions is a question of debate among many delegates. A spokesman for the Cuban delegation said today that he and others on the positive-action side were determined to press for the original draft of the United States, even if Mr. Hull should prove willing to drop the idea in favor of the Argentine cooperation proposal, as now seems to be the case.

Cubans Irked by Rebuff

The Cubans are aggrieved because Argentine opposition has stymied their pet proposal to have the conference go on record condemning racial persecution. They offered a draft resolution to an executive meeting of the steering committee Saturday, but action was indefinitely deferred.

The Cubans want the conference to declare in a formal resolution "that it repudiates all persecution of a collective character because of racial or religious motives which places a substantial number of human beings in a material situation in which it is impossible for them to live honorably and to carry on their activities within a minimum standard of dignity."

"In making this solemn declaration," their draft reads, "it is implied that the nations of America assume the moral obligation to continue to apply as heretofore the principles of tolerance and respect for human dignity, and an invitation is hereby tendered to all countries not represented at the Eighth Pan-American Conference to uphold these principles of civilization and cooperation."

Because this resolution is not included among the official agenda, it is necessary to obtain the backing of the steering committee before it can be referred to a committee or considered on the floor.

Opposition of the same kind that is blocking the "solidarity" convention will be used to prevent its coming into the open, for it is one of those things that nobody could vote against, and yet it is not wanted by South Americans, who do not desire to antagonize any European element.

The conference began real work today with organization of the committee that will sift the proposals presented. The committees only elected officers today, but they arranged to meet daily in an effort to finish all reports by Dec. 24 with a view to holding the final session of the conference Dec. 27.

The committee elections resulted as follows:

Committee on Organization of Peace—Chairman, Dr. Afranio de Mello Franco of Brazil; vice chairman, Narciso Garay of Panama.

International Law—Chairman, Roberto Urdaneta Arbalaez of Colombia; vice chairman, Tobias Zuñiga Montufar of Costa Rica.

Civil and Political Rights of Women—Chairman, Juan J. Remos of Cuba; vice chairman, Mrs. Elise F. Musser of the United States.

Intellectual Cooperation—Chairman, Julio Tobar Donoso of Ecuador; vice chairman, Dantes Bellegarde of Haiti.

Pan American Union Between Conferences—Chairman, Eduardo

THE NEW YORK TIMES, WEDNESDAY, DECEMBER 14, 1938.

Secretary Hull's Radio Talk From Lima

LIMA, Peru, Dec. 13 (P).—The following is the text of the address Secretary of State Cordell Hull broadcast to the United States tonight from the Pan-American Conference:

I speak from Lima, beautiful and historic capital of Peru. Here the Eighth International Conference of American States is in session.

It is difficult for us American delegates to find words adequately to express our appreciation for the friendly and hospitable welcome which has been accorded by the government and people of Peru. We have been made to feel like old and trusted friends, and no action of friendship or courtesy has been omitted. The same grace of spirit which shaped the beautiful architecture about us has entered our reception.

We have been mingling with our colleagues and other delegations ever since our arrival. Many of us have been together at previous inter-American conferences and with these we carry forward discussions and friendships already formed, besides having an opportunity of making new friends and thus forming an ever-enlarged circle of men and women in the family of American nations.

This is the basis for confidence and cooperation which facilitates a frank and full exchange of views and the growth of a common policy.

Confidence of Progress

Yesterday there began the work in committees. From now on the duties of the conference will have first call on our time, day and night, seven days a week. I believe we will strengthen and perfect arrangements worked out between us at former conferences and move toward our purposes of international peace, order, economic security and friendly cooperation.

Let me express first the clear impression I already have gained from my conversations with my colleagues of other countries—that there exists between us a measure of moral and spiritual unity far greater than ever before.

This is the foundation of all forms of solidarity. In our measurement and attitude toward contemporary affairs and future prospects there are exhibited broader visions and broader views than sometimes have prevailed in the past. That excessive short-sighted nationalism which always existed to a great or lesser extent seems definitely to have subsided in the face of a grave world situation.

I sense much less rivalry, whether between countries or individuals, than at previous conferences and a much greater sense of common interest and desire. The general spirit of harmony reveals itself in all our preliminary work. A keener and more informed interest than heretofore in the fundamental conditions and problems both in this hemisphere and the outside world gives a greater vitality to our meetings than ever before.

"Augury for Our Capability"

This is a good augury for our capability to deal with problems on the basis of principles developed in our previous meetings, of which there have been two in the last five years. The seventh conference met at Montevideo [Uruguay], in 1933 at a time when the world economic crisis was causing a great social and political instability.

The countries of the Western Hemisphere had not escaped these disturbances. Further, the actual situation prevailing on the American continents when we met at Montevideo was not encouraging. A bitter war was in progress between two American republics. There were serious breaches in unanimity and mutual confidence among us.

Taking the situation as it existed, the Montevideo conference contributed much to a solution of these difficulties. Agreements signed there condemned the use of force as an instrument of national policy and placed the American republics solemnly on record in support of a world order based on law and justice.

They also recorded the intention of these republics to work toward the elimination of excessive barriers to commerce and to seek to develop trade on a basis of equal opportunity, which is the best basis for mutual economic benefit and freedom from arbitrary dictations and discriminations connected with other types of trade agreements.

The situation on the American continents became immeasurably brighter when hostilities in the Chaco ceased in June, 1935, and the Republics of Bolivia and Paraguay initiated peace negotiations at Buenos Aires [Argentina] with the friendly assistance of representatives of six other American republics. This work was successfully completed with signatures in July, 1938, of a treaty of peace and friendship between Paraguay and Bolivia.

"A Challenge to All"

Peaceful settlement of this century-old quarrel is a challenge to all who doubt that the most difficult international disputes are subject to settlement without armed force or other means of violence. It left friendliness and a constructive opportunity where before there was a terrible and cruel struggle.

Encouraging developments at the Chaco peace conference made opportune convocation of a special conference for maintenance of peace at Buenos Aires in December, 1936. Events in other parts of the world brought forcibly to the attention of the American republics the urgent necessity of making even more effective their action to assure maintenance of peace in this hemisphere.

Thus at this conference all our governments found themselves in unanimous agreement regarding this undertaking. Arrangements for dealing with questions and disputes between the American republics were further improved. Of no less importance was the common recognition shown of the fact that any menace from without to the peace of our continents concerns all of us and therefore properly is a subject for consultation and cooperation. This was reflected in the instruments adopted by the conference.

Now, at this meeting at Lima, we have undertaken to discuss implementation of agreements already reached, and to provide further effective measures for consultation and cooperation in all matters of common concern.

The advancement in our relations which I have sketched rests upon a common acceptance of certain fundamental principles for which American nations fought in their stuggles for independence. When, as today in other parts of the world, these fundamental principles are being subordinated to other philosophies or purposes, the American nations understand anew their precious and life-giving quality.

"Inner Spirit of Tolerance"

For the American peoples have chosen a representative government as the basis for their political philosophy and practice. They hold maintenance of and respect for human rights and individual liberties essential to progress of mankind and worthy civilization. They have developed an inner spirit of tolerance of individual toward individual and group towards group, and they know the spirit gives quality to their life and society.

They are keenly aware of the threat to those principles and institutions which has arisen elsewhere in nations holding alien ideas which they seek to impose by force or extend by deception. Unless I mistake the prevailing attitude here, the American nations are determined to defend these institutions and principles of their own choice.

I am absolutely convinced that every one of the American republics desires to live in peace and work in friendly cooperation with every other nation in the world.

We do not seek to impose our form of government or our institutions upon other peoples. We do believe international relations can be conducted on the basis of peace and international law and order, an appreciation of each other's problems, and recognition that the welfare of peoples is the primary concern of governments.

In these beliefs and efforts we remain conscious of the ever-increasing interdependence of all nations. Hence we do not seek a merely regional solution alone, but one broad enough to take full account of those world conditions and problems which materially affect regional welfare.

We are establishing among ourselves a system of relationships which is in accord with our institutions and principles. We believe the principal bases of this system are applicable to relationships among all nations, and we eargerly welcome the cooperation of each and every country in the world in their support.

At later opportunities we will report in clearer detail on specific matters under discussion at our meetings. For tonight let me conclude simply expressing again my confidence that here at Lima we will carry further forward the work of the past.

To that end we must have the continued and increasing support of our peoples, for it is only with their support that our freedom, our individual liberty, and the security of our countries and our institutions can be safeguarded against the possible threat of armed force, anarchy and intolerance.

UNITY DECLARATION AIMED AT GERMANY EMERGING AT LIMA

Curbs on Racial Minorities and Plans for Consultation Suggested as Bases

HULL CITES ALIEN THREAT

Says in Radio Talk Americas Are Determined to Defend Their Chosen Principles

12/14

Secretary Hull's address at Lima Conference Page 16.

By HAROLD B. HINTON
Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 13.—The outline of the form of demonstration of continental solidarity in the face of outside political aggression which the Pan-American conference is likely to make became clearer today. It appeared that it would be aimed almost exclusively at Germany.

Delegates here, as far as can be judged from corridor conversations, favor four steps which might form a pattern less distinct but more widely acceptable than the draft plan Secretary of State Cordell Hull brought to Lima.

The first and most far-seeing proposal is the Brazilian project to have American States guarantee not to accord special status to racial or national minorities within their borders. This obviously is intended to refer to the large and prosperous German colony in Southern Brazil. It looks toward the time when its members might be regarded by Berlin in the same status as the Sudeten Germans.

Would Bar Special Rights

A second proposal is an Argentine resolution whereby American States would agree to prohibit the exercise by residents of their territory of pretended political rights bestowed by their countries of origin. This aimed at such practices as the voting by Germans resident in Latin-American countries in the last German plebiscite.

A third is the Cuban resolution denouncing racial and religious persecution and pledging the Americas always to continue "the principles of tolerance and respect for human dignity." It has been a notable feature of conference meetings that all condemnations of racial, religious or class discrimination have aroused great applause.

The Bolivian delegation has presented a similar project condemning racial discrimination and recommending that American countries open their frontiers to immigration, setting up in opposition to European race persecution the American motto of brotherhood, peace and human concord. Although carefully worded to avoid diplomatic offense, the Bolivian resolution clearly condemns Germany's persecution of Jews, recommending that American republics permit immigration of Jewish refugees.

Consultative Machinery

The fourth step would be something along the lines of the Chilean proposal to afford machinery to put into effect consultation in case of a

Aires pact.

The United States' proposal that the Foreign Ministers of the American republics constitute a permanent consultation committee was thrown out at Buenos Aires, leaving no specified procedure. The Chileans would have each Pan-American conference designate an American capital as the seat of all such consultations until the next conference. The resident diplomatic corps of that city would be a consultative committee, if such a need arose.

This, in additon to tending to stimulate discussion of this topic every five years when Pan-American conferences meet, would, its sponsors believe, break down objections that all interim activities center in Washington.

Secretary Hull and other United States delegates have not commented on these or other concrete proposals. The Secretary is busy seeing other delegates, circulating memoranda and otherwise seeking their views. He will make up his mind on individual proposals only after he has sounded out the situation thoroughly.

What projects the United States delegates brought in draft form are intended only as bases for discussion. Any reasonable modifications will be acceptable.

Mr. Hull is reasonably confident of the satisfactory outcome of this conference. He has noted greater trust and confidence among delegates than at previous Pan-American conferences, he said in a broadcast tonight.

"In our measurement of and atti-

Continued From Page One

tude toward contemporary affairs and future prospects," he said, "there are exhibited broader visions and broader views than sometimes prevailed in the past."

Mr. Hull has always been a believer that the intangibles of these conferences are of greater value than signed documents. He attaches the greatest importance to the friendships and understandings made between men directing the policies of their respective countries.

"I sense much less rivalry, whether between countries or individuals," he declared, "than in previous conferences, and a much greater sense of common interest and desire. A general spirit of harmony reveals itself in all our preliminary work. A keener and more informed interest than heretofore in fundamental conditions and problems, both in this Hemisphere and in the outside world, gives greater vitality to our meetings than ever before."

He repeated his warning against "the threat to these principles of institutions which have arisen elsewhere in nations holding alien ideals which they seek to impose by force or extend by deception."

No Wish to Impose Our Forms

Mr. Hull emphasized that the American republics were not seeking to impose their form of government and other institutions on other nations.

He has sensed the undoubted sentiment of a vast majority of the delegates here that resistance against political aggression is desirable and possible. Many of them, especially South American States, do not follow him in the fields of resistance to economic and possibly military aggression, believing the first is unbeatable and the second is not an immediate menace; but he is on sure ground in opposing political infiltration.

All the United States delegates have been struck with the sincere abhorrence of nazi political philosophy on the part of their colleagues from other American States, and they feel that this sentiment may override the dictates of prudence in certain delegations in the final analysis if precautions stay in the political field. Also generalized declarations of the kind that most of them have in mind make popular political ammunition for various home fronts.

ALIEN CLAIMS ISSUE VEXES LIMA PARLEY

Chilean Threatens Fight on the Conference Floor to Deny Foreigners Special Treatment

U. S. DELEGATES WORRIED

Effort Likely in Subcommittee to Modify Proposal on Diplomatic Protection

By HAROLD B. HINTON
Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 14.—Serious work started today at the Pan-American Conference on the drafting of a convention concerning pecuniary claims by American States against other States on behalf of their nationals, with the promise that this would become the most controversial intra-American subject discussed.

A proposal by experts that foreigners should not be entitled to the diplomatic protection of their governments except in cases of a denial of justice or violation of international duty is now in the hands of a subcommittee named by the committee on international law on which Professor Charles G. Fenwick and Green H. Hackworth, legal adviser to the State Department, are the American representatives.

Alberto Cruchaga Ossa, legal counselor to the Chilean Foreign Ministry, who is a member of the experts' commission formulated the recommendation, has told fellow members of the subcommittee that he intends to carry the fight he lost among the experts to the floor of the conference and has the support of the Chilean delegation.

The subcommittee hopes to evolve a formula to meet his objections and at the same time those of the United States, which as yet have not been formally expressed. The subcommittee's labors will take the rest of the week, so that the fireworks, if any, are not expected before next week.

What Cruchaga Wants

Señor Cruchaga wants an agreement that foreigners cannot expect better treatment than domestic nationals no matter what the circumstances.

The United States delegates have been cautioned not to express their views on any given topic, but it is apparent that Señor Cruchaga's proposal and even the recommendation of the committee of experts are viewed with grave concern.

It is expected that an effort will be made to qualify the denial of justice clause to include injustice on the part of any judicial or administrative body. It also will be attempted to draft language that will not hinder the employment of diplomatic good offices as traditionally exercised, even when the subject might be of commercial interest to an individual or corporation.

The United States delegates, as always happens on similar expeditions to Latin America, have been exposed to stories of hardships and allegedly unjust treatment of North American business men in the field.

The delegates obviously do not have the time or facilities to investigate the stories or hear the other side, but they are naturally concerned that their country's commercial representatives in this part of the world feel they have been badly treated.

To Study Projects Closely

Under these circumstances they are prepared to examine closely any project, even under the guise of codification of international law, that would tend to limit peaceful, persuasive governmental action on behalf of hard-pressed nationals who have a prima facie case.

Against this they balance the political consideration that the United States, if it is prepared to deal with the Latin American nations on a basis of equal sovereignty, must be prepared to accord them the same rights as it claims for itself.

It is hoped to shape a satisfactory compromise in committee, for open discussion of such a delicate subject on the floor of that conference would be to invite recriminations that would shatter the demonstration of unanimity Secretary of State Cordell Hull is so anxious to offer an Old World torn by dissension.

U. S. PLAN MERGES EIGHT PEACE PACTS

Proposal Presented at Lima After Months of Study by Washington Experts

SPEEDS END OF DISPUTES

'Preventive' Bodies Set Up, and Signatories Would Agree to Defer Military Steps

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 15.—The United States delegation offered the eighth Pan-American conference today its major contribution toward preservation of peace in this hemisphere. The proposal took the form of a new treaty embodying the principles of eight separate pacts now in existence.

The draft was worked out by experts headed by Green Hackworth of the State Department on the voyage to Peru. It represents many months of study of the best methods to combine the best features of all the current inter-American peace agreements.

Until today it was uncertain that the United States would formally present this draft as an official project. Secretary of State Cordell Hull had it prepared as a basis for discussion with the idea of presenting it, if agreeable to the legal experts of other delegations.

It is the United States' idea that the present situation might operate to aid an aggressor nation by permitting invocation in the guise of seeking peace of that particular part of the pact machinery that would produce the greatest delay and obstruction.

The measures from which the leading principles were extracted are the following: Gondra Treaty of 1923, Kellogg-Briand Pact of 1928, Inter-American Conciliation Pact of 1929, Inter-American Arbitration Pact of 1929, Saavedra Lamas Treaty of 1933, Convention on the Rights and Duties of States of 1933, Treaty for the Prevention of Controversies of 1936 and Treaty on Good Offices and Mediation of 1936.

The United States' draft would establish permanent bilateral mixed commissions of the signatory governments to study the causes of future controversies with a view to eliminating them between the nations they represent and to propose additional measures, treaties, etc., to promote relations between themselves.

The contracting parties would renounce war as an instrument of national policy, agreeing that the "settlement or solution of all disputes or controversies between them of whatever origin, shall never be sought except by pacific means."

We would seek arrangament of difficulties first by diplomatic channels and then would resort to a permanent commission of investigation and conciliation, of which three would be established, one in Washington, one in Montevideo, Uruguay, and one in Bogota, Colombia.

Signatory States would agree not to begin mobilization or concentration of troops or to engage in any hostile actions for six months after the conciliation commission had proposed a basis of settlement.

The prentive commissions would be made up of the three senior diplomats in point of view of service accredited to the capitals named whose nations were not parties to the dispute. This peace machinery is new.

The commissions could operate on their own motion or at the request of one party, or two or more parties where the controversy was multilateral. Their first duty would be to determine "whether a dispute or conflict exists which does not promise a solution through diplomatic channels and which endangers peace between the parties and thus the peace of the American continents."

Where such a situation was adjudged to exist, the dispute would be referred to a commissio nof investigation and conciliation made up of five members, all American nationels, drawn from a panel of two nationals from each contracting government.

The commission would report within ninety days, and its findings would serve as a basis for further litigation, if any.

If the parties were unable to be reconciled by this commission, the peace threat would be sufficiently important to cause consultation among al' the signatories, as provided in the Buenos Aires pact.

The parties, of course, could agree to submit their dispute to the equity decision of the Chief Executive of some American State, to arbitration or to the international court. Otherwise the contracting States would offer their good offices by way of mediation.

If that failed the parties would submit to arbitration their differences, except "those which are within the domestic jurisdiction of any of the parties to the dispute and not controlled by international law and those which affect the interest or refer to the action of State not a party to this treaty."

Each party would select two arbitrators who could choose a fifth. The decision of the arbitrators would be definitive and without appeal.

The draft proposes that all existing treaties be voided except the Kellogg-Briand Pact and by Convention on the Rights and Duties of States.

The usual termination clauses are included, except that "denunciation shall not affect any pending proceedings instituted before notice of denunciation is given."

The United States delegation also introduced today recommendations that the treasuries of American States arrange periodic informal meetings to discuss subjects of mutual interest; that the republics facilitate vacation courses and exchange of teachers and students; that the governing board of the Pan American Union arrange exchanges of art, literature and dramatic productions; that American universities give reciprocal recognition of each other's degrees; that all American republics fittingly celebrate the 400th anniversary of Francisco Vasquez de Coronado in 1940; that attention be called to the World Federation of Education Associations meeting at Rio de Janeiro, Brazil, next August; that the American republics take steps to preserve historic sites and wild life, and that these States ratify the Convention for the Promotion of Inter-American Cultural Relations.

HULL TRADE POLICY IS ADOPTED AT LIMA FOR ALL AMERICAS

Signatories Pledge End of Restrictions on Commerce Other Than by Tariffs

ALIEN INTERESTS ISSUE UP

Mexico Urges Limitation on Protection of Nationals in Business in Other Lands

12/18

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 16.—The eighth Pan-American conference took its first conclusive action today, unanimously adopting a resolution intended to commit the Americas to liberal trade practices in their dealings among themselves and with the rest of the world.

With this business transacted, the gathering is likely to emerge from the stage of speech-making that always characterizes its first week. With only eight working days left, if the conference is to adjourn as planned on Dec. 28, Secretary of State Cordell Hull and other delegation leaders are urging their colleagues on committees and subcommittees to hasten their labors so the conference can begin acting on their recommendations.

The economic resolution passed today will probably be the most important action in that field. It consists of a recitation of the bad effects on world economy of restriction and diversion of international commerce, reiterating the sentiment at the previous two Pan-American conferences, where Secretary Hull obtained declarations in support of his trade theories.

Hull's Principles Embodied

The recommendations embodied Secretary Hull's favorite principles of the economic basis for permanently peaceful relations among nations. The resolution was actually drafted by the United States delegation before leaving Washington, but the Secretary of State preferred to his usual technique of getting all delegations united before inroducing the project to assure its unanimous passage at the plenary session.

Mr. Hull concurs in the language of the resolution that experience has shown that reasonable tariffs are less restrictive on exchanges of goods and services in international commerce than quotas, embargoes, exchange control, import licenses and other devices adopted after the World War.

South American countries have tired of all these devices, and Brazil, Chile and others are even now enlarging economic relations with Germany via the barter route. These circumstances make more interesting Mr. Hull's success in winning adherence to his declaration of old-fashioned liberal principles.

On the practical side time alone will tell what the declaration means. At two previous Pan-American conferences Mr. Hull has been able to persuade delegates to sign such a declaration of faith, but their home governments have proved hesitant to put the principles into effect legislatively.

At a matter of fact the trend has been away from these principles

since the first declaration was adopted at Montevideo, Uruguay, five years ago. The United States program of reciprocal trade agreements with Latin America is at a standstill at present because countries with whom pacts might be concluded find themselves unable, because of prior commitments, to assure most-favored-nation treatment, upon which Mr. Hull insists. In particular negotiations with Argentina and Uruguay are held up because of discriminatory practices in connection with official exchange control.

Program Is World Wide

The present resolution takes up the problem of administrative formalities connected with importations, which are often as restrictive as actual laws. It commits the Americas to vigorous pursuit of a trade agreements program with its extension to the whole world as quickly as other nations can be persuaded to join.

Reports are current that at least one delegation, and perhaps others, will register reservations to the economic resolution when the time comes to sign the final act of the conference. Such reservations, if they materalize, would be intended to take out the sting, as far as they are concerned, toward customers that prefer other ways of doing business, but leaving them subscribing to the principle that Mr. Hull's way is the best and the ideal to be approached.

Nothing of this kind was displayed today, as the resolution passed without a dissenting voice after only pro forma remarks by a few delegates. It was rushed through the steering committee and the economic committee this morning so as to be ready for action at this afternoon's plenary session.

Dr. Francisco Castilo Najera of Mexico in his first speech of the conference recommended that a special conference be held soon to take up the vexing question of governmental protection of nationals doing business in foreign countries. He said the present practice sprang from the instinct of clan or tribe to help its sons do well when he left home. But he held it must be examined anew if America wished to give effect to "authentic, not theoretical equality of States."

The Mexican delegates also asked that "justice be accorded to American women," who constitute more than half the population of this hemisphere. Most of his discourse was a discussion of democracy in the contemporary world. He drew the comfort that "the triumphs of brute force are not definitive, and when human evolution encounters a check not in the spirit of the century, a healthful crisis produced itself at a convenient moment, thanks to unknown laws."

Dr. Castillo Najera's speech was studded with medical figures. Speaking of the historical evolution of public conscience, he said such events as the dismemberment of Poland and the violation of Belgium induced "lesions of the soul" of mankind. He felt confident that the Americans would follow the Drummond law, a corellary to the Darwinian theory, from which the fight for individual preservation tends to become a movement toward the safety of collectivity.

"Future evidences of the tragedy of barbarism such as are visible on the horizon of other skies shall not destroy the treasures of civilization without eclipse of progress, without interruption of the unending march of humanity toward eternal perfection," he said.

The conference, on the motion of the Mexican delegation, passed a resolution commending Bolivia and Paraguay on the termination of their Chaco war and praising the successful efforts of the mediatory powers, Argentina, Brazil, Cuba, Uruguay and the United States.

TEXT OF TRADE RESOLUTION

Following is the text of the resolution on removal of trade barriers adopted by the Pan-American Conference as broadcast from Lima yesterday by Adolf A. Berle Jr. over a NBC network:

Considering that the full economic development of nations requires the greatest possible volume of mutually profitable international trade and that such a volume of trade cannot be developed while excessive barriers exist, whether in the form of high tariffs, quotas, licenses, exchange returns and other types of restrictive methods of administering exchange and monetary policy which impair the maintenance of complete equality of commercial opportunity as between their foreign supplies, and

Considering that all such obstacles to trade create unemployment, lower standards of living, limit opportunities for economic advancement, obstruct the fulfillment of large social programs, direct trade in uneconomic channels and tend to create international friction and ill will, and

Considering that the American republics have at previous conferences expressed their support of measures intended to grant further increases in and to bring about the persistent elimination of unreasonable and excessive barriers of all kinds to international trade.

Considering these things, the eighth international conference of American States resolves:

1. To reaffirm the declarations of the Seventh International Conference at Montevideo and the Conference for Maintenance of Peace at Buenos Aires, calling upon the American governments to reduce to the greatest extent found possible, all existing types of restrictions upon international trade, and;

2. To endorse the negotiation of trade agreements embodying the principles of equality of treatment as the most beneficial and effective method of extending and facilitating international trade. And the conference recommends

3. That the governments of the American republics substitute as rapidly as possible reasonable tariffs in lieu of other forms of trade restrictions inasmuch as experience has shown that such tariffs tend in general to be less restrictive and more susceptible of administration on the basis of most-favored-nation treatment than are any of the other forms of control over trade, and

Second, that they reduce, by mutual agreement or otherwise, administrative and technical formalities in connection with the importation of goods to the minimum required for the adequate enforcement of customs laws.

Third, that they proceed as vigorously as possible with the negotiation of trade agreements embodying the principle of non-discrimination; and.

Fourth, that they make every effort by whatever appropriate means are open to each of them, to encourage other nations to adopt in the conduct of their commercial policy the methods recommended above.

LIMA, Peru, Dec. 16 (AP).—For a mutual defense measure, Secretary of State Cordell Hull has definitely ruled out the possibility of anything in the nature of a Pan-American league of nations or a military pact.

Despite informal objections by some delegates to the Pan-American conference to some of the ideas brought to Lima by Mr. Hull, such as a pact for continental defense, the Secretary of State still believes all nations represented are disposed to work together against a military or any other kind of threat.

He has reminded delegates that their nations agreed in 1936 at the Buenos Aires [Argentina] inter-American conference that any force or threat of force would be a matter of concern to all and that they should confer immediately in such an eventuality.

Among other conference business today was the introduction of a Cuban plan to bring about an armistice in the Spanish civil war and mediate the conflict through a committee of American diplomatic leaders. While Dr. Francisco Castillo Najera of Mexico, this evening's speaker, strongly supported the measure other delegates objected on the ground that it constituted interference in European affairs.

The steering committee decided that heads of the delegations should consult outside the conference as to the admissibility of the plan.

ISOLATION OF AMERICAS IS OPPOSED AT LIMA

Display of Complete Unity Hampered By the Unwillingness of Some To Antagonize Germany

12/18/37

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 17.—The picture of the American republics as a tranquil oasis in a troubled world which the eighth Pan-American Conference hoped to create will be painted in paler colors than Secretary of State Cordell Hull and his colleagues want, but stronger than the Argentinians, Chileans, Brazilians, Uruguayans, Paraguayans and Bolivians originally desired, according to present prospects. As in most gatherings of men, the results will mirror compromises and conflicting ideas.

Secretary Hull insists that only unanimous action must be taken in order to impress the outside world with the unity of objectives and purposes of the twenty-one American republics. Just as a chain is only as strong as its weakest link, unanimous conference actions are only as positive as the most dissident member. The United States in the desire to achieve a concrete program and solidify the Americas against possible military, political and economic aggression from outside sources has the warm support of Mexico, Cuba, Colombia, Venezuela and the Central Americas, but this is not enough, as most of the delegates agree that any Pan-American Conference action adopted by a vote of fifteen to six or even less than nearly unanimous would be unimpressive in the eyes of the dictators, who say democracies cannot function because of too much talk.

Shock From Germany

However diluted may be the final demonstration of American solidarity, it will be apparent that it is aimed principally at Germany. The resurgence of racial and religious persecutions has shocked Latin America as much as the United States.

The problems of the conference divide themselves into those concerning the common relations of the Western Hemisphere with the rest of the world and those regulating the relations of the republics among themselves. In the field of foreign relations it is becoming more and more apparent that the only common ground now existing is the determination to resist the infiltration of political concepts re-

way road. There are those among the American advisers who believe this is inevitable, regarding its price as worth while to pay in the interest of United States security should world disorder increase.

Others, and their ranks include many North American business men in the Latin-American field, believe such a development totally unnecessary and easily forestalled by a show of firmness on the part of the United States Government on questions concerning the validity of governmental contracts, pledges and the like. A symptom of the delicacy of this subject was the complicated discussion aroused by the report of a committee of experts on the codification of international law on the question of pecuniary claims.

Rights of Private Investor

Over this relatively minor aspect of the problem rages a storm of controversy involving the rights and privileges of the private investor seeking business in foreign countries. The degree of protection which his own government can extend to him has always been in dispute since foreign capital began to enter Latin America, just as in China and other parts of the world. The shades of opinion run from the extreme Left, which insists that the foreigner can expect no better treatment than domestic nationals under any circumstances, to the extreme Right, which would place the foreign investor in a privileged status immune to the sometimes whimsical changes of policy accompanying the volatile governments of Latin America. Mr. Hull is trying to steer a middle course, with the usual attendant difficulties.

Much has been said of Italo-German influences trying to sabotage the Pan American Conference's efforts to attain solidarity, and it may be true, but the reasons for the lack of unanimity of viewpoint lie closer to home.

U. S. and Argentina

It is difficult to see when Argentina and the United States will be able to conciliate their competitive economies sufficiently to view all problems alike, much less the various shades lying geographically, economically and philosophically in between. In the practical viewpoint of the present gathering, it is not

... Germany. The resurgence of racial and religious persecutions has shocked Latin America as much as the United States.

The problems of the conference divide themselves into those concerning the common relations of the Western Hemisphere with the rest of the world and those regulating the relations of the republics among themselves. In the field of foreign relations it is becoming more and more apparent that the only common ground now existing is the determination to resist the infiltration of political concepts regarded as contrary to the ideals on which the independence and national life of all the nations represented here were founded. It is only the method of expressing this community of interest and the determination to perpetuate it that is worrying the delegates now. Nobody denies its existence or desirability.

The Argentinians and their allies, however, are unwilling to have this common meeting ground staked off in a manner appearing to exclude the Old World. In their countries there exists no such feeling of complete isolation which is the background of public opinion in the United States.

Feeling of Kinship

Despite the fact that the Anschluss, the Munich agreement, the steady German progress eastward, the Franco-Italian Mediterranean crisis and other manifestations have completely changed the political and economic status of Europe, Latin-American countries generally maintain a feeling of close kinship with the continent from which they sprang. Their statesmen are willing to break with the political ideas of certain existing regimes just as they did with those of Spain and Portugal more than a century ago, but they are unwilling even to start to cut themselves off as so many North Americans seem to desire.

Whatever ideas Mr. Hull may have had while traveling to Lima concerning combined military and economic defense—and these still have not been made public—he soon realized that it was impossible to translate them into solid form in the language of this Pan-American Conference. It is too soon after the world-shaking events of the past ten months for the Latin Americans to make up their minds on what they mean to them.

Barter Seen as Only Method

The barter economy which has brought Germany to such a prominent place in foreign trade in this hemisphere strikes them as the only method offered to dispose of their surpluses of raw materials. If they find a better hole they will go to it, but they see little prospect in the world where the general expansion of international exchanges of goods and services is likely to be stifled by restrictions of various kinds for a generation to come.

The betterment of inter-American economic relations is the subject dearest to Mr. Hull's heart; time alone will tell if the resolution, adopted yesterday, in favor of more liberal trade practices will prove of importance.

Thus only the political sphere offers a promising field for mutual defense. Little attention has as yet been turned toward the problems of inter-American relations, but these offer as thorny a path as external affairs. A large question mark hangs over the Pan-American Conference when this domain is entered, symbolizing speculation as to whether the Roosevelt-Hull "good neighbor" policy toward Latin America must increasingly become a one-

man influences trying to sabotage the Pan American Conference's efforts to attain solidarity, and it may be true, but the reasons for the lack of unanimity of viewpoint lie closer to home.

U. S. and Argentina

It is difficult to see when Argentina and the United States will be able to conciliate their competitive economies sufficiently to view all problems alike, much less the various shades lying geographically, economically and philosophically in between. In the practical viewpoint of the present gathering, it is not difficult to understand how such countries as Brazil and Chile, which are increasing their economic relations with Germany under the conditions mentioned, hesitate to place themselves on record as too inalterably opposed to anything German, fearing possible economic reprisals.

For all its desire to immunize the Americas against totalitarian infection, the United States is unable to offer to buy goods that Germany might boycott. This may be a short-sighted view, since Germany is becoming less and less dependent on Latin America for raw materials as the "Drang nach Osten" brings rich supply sources into its orbit, but it is a potent influence at this writing.

In Broadcast at Lima He Warns That Totalitarian Powers Must Not Expect Change

ASSAILS PROPAGANDA WAR

Would Be 'Blunder to Mistake Differences for Disunity,' He Tells Aggressors

12/19/38

The text of Landon's address at Lima Conference Page 2.

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 18.—The outside world need not believe that the United States will permit any foreign government to gain a foothold in this hemisphere, whether a Democrat or a Republican occupies the White House, Alfred M. Landon, former Presidential candidate, said tonight in a radio address carried by the Columbia Broadcasting System.

The second United States delegate to the Lima conference used most of his time on the air to warn the totalitarian states, in his capacity as head of the Republican party, that they must not expect any change in the policy of the United States in this regard. He recalled that the United States had pursued the same policy "for over a century regardless of election results."

He found that representatives of the other American republics gathered at the Pan-American Conference desired to maintain the same independence for the Western World.

He said that the occasion for his warning that the Republicans were committed to the same line of conduct respecting Pan-American policy was prompted by the fact that "agents of the totalitarian powers are busy spreading propaganda all over Central and South America to the effect that these countries cannot count on the continuity of the policy of the United States."

United Against Aggression

"We Americans have had our family disputes," Mr. Landon continued, "and may continue to have them, but let me say that any one would be making a great blunder to mistake these differences for disunity, for in the end we will always unite against any outside aggressor."

The events in Central Europe, the former Governor said, show the effectiveness of new methods of penetration and control used for political purposes. He added that communism, nazism and fascism were now waging vigorous and aggressive campaigns to gain positions of influence in the Western Hemisphere.

"In this war," he said, "many instruments are employed: propaganda, arousing the prejudices of particular groups, and sometimes the use of purposeful economic arrangements. That these are the instruments instead of bayonets does

not make it any less real and dangerous to the democracies.

"What many people do not appreciate is that commerce under completely controlled arrangements has potential meaning and effects far different from those of the ordinary private commercial arrangements to which we in the United States are accustomed. Each day drives that fact home more clearly and compels our attention.

Occasion for Conflict

"Those controlled States can and many times do disregard private profit calculations and even long-run economic benefits in their efforts to extend their political influence or control. This tends in that way to increase the possible area and occasion of diplomatic conflict.

"The duty of leadership in the maintenance of democracy plainly devolves in a large measure upon us. We must fulfill this leadership vigorously and fearlessly. I think we can be confident in the long run that neither communism nor Nazism is going to succeed anywhere in this hemisphere. The spirit of liberty is too strong.

"Nevertheless, this struggle of fascism and communism is a matter of great moment to us. Unless we in the United States have been become so soft that we no longer are concerned as to whether other countries get a foothold in this hemisphere, the time has come when in common with other American republics we must take account of these activities in a serious and practical way. This means going beyond mere words and gestures."

Mr. Landon apparently found it untactful to add that the distrust of the continuity of American policy as contained in the Good Neighbor doctrine is found within this hemisphere as well as without it. A consoderable body of Latin-American opinion regards this declaration as a purely personal matter with President Roosevelt and Secretary of State Cordell Hull to be changed as soon as the opposition is returned to office.

Mr. Landon desired to lay this ghost comphletely, which was the principal reason that he consented to serve on the American delegation to the conference.

Praise Given by Capper

TOPEKA, Kan., Dec. 18 (AP).—Senator Arthur Capper, Republican of Kansas, said in a radio address today that Alfred M. Landon's speech from the Pan-American Conference at Lima reflected the sentiment of the American people.

"It is my opinion that former Governor Landon made a worthwhile contribution to the cause of solidarity in the Western Hemisphere," Senator Capper said.

"He served notice on the Old World that the Western Hemisphere can be counted on to resist unitedly and to the uttermost any attempts to establish, enforce or maintain policies toward any portion of the Western Hemisphere that would be inimical to the interests of the American continents."

Mr. Landon's tribute to the energy, perseverance and patriotism of Secretary of State Cordell Hull is well deserved, Senator Capper said.

No Subterfuge, Says Pittman

WASHINGTON, Dec. 18 (AP).—Senator Key Pittman, Democrat of Nevada, who is chairman of the Senate Foreign Relations Committee, said tonight that the address of Alfred M. Landon, a member of United States delegation to the Pan-American Conference at Lima, Peru, was "typical of American character."

Senator Pittman said that the speech was "imbued with that patriotism which marks our citizens when dealing with all vital questions particularly with regard to our neighbors' problems. There was neither subterfuge nor fear in his statements."

ARGENTINES AWAIT SOLIDARITY ORDERS

Action at Lima Held Up by Their Indecision—Bloc of 13 Demands Strong Stand

12/20/38

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 19.—Efforts to break the deadlock on the declaration of solidarity by the Americas in the face of external aggression continued today at the Pan-American conference, but without apparent development to a late hour tonight.

Unofficial soundings continued, but no meeting was held because the Argentine delegation had not received new instructions from Buenos Aires, for which it asked Saturday. Late this afternoon Foreign Minister Carlos Concha of Peru called on Secretary of State Cordell Hull at his private office in the Bolivar Hotel. They discussed the situation for half an hour but nothing was said on either side afterward.

As was decided at Saturday night's meeting of the heads of nine delegations, Dr. Concha, as president of the conference, and Afranio de Mello Franco of Brazil as chairman of the Committee on Organization of Peace, have taken charge of reconciling the opposing views. They will attempt to reduce these in written terms to the strongest statement of Pan-American solidarity that can be reached with unanimous consent.

13 Nations Want a Strong Stand

Meantime a bloc representing thirteen nations has been meeting daily under the chairmanship of Dr. Francisco Castillo Najera of Mexico, consulting on the strategy to be employed by those wishing stronger action than Argentina, Brazil and Chile desire or than the United States appears to want or insist upon. These countries are Cuba, Mexico, Ecuador, Venezuela, Colombia, Panama, Haiti, the Dominican Republic, Costa Rica, Honduras, Nicaragua, El Salvador and Guatemala.

They spent the day drafting a declaration incorporating items on which complete agreement is to be the basis of elaboration as circumstances permit. Their original skeleton draft will obviously contain only the most harmless generalities, but will be the starting point when at their next serious meeting with the Argentines.

Another important United States project concerning unification and simplication of eight existing peace pacts affecting the Americas started toward oblivion today. A subcommittee of the Committee on Organization of Peace wanted to recommend the United States project, along with the Mexican peace code and other proposals to be sent to the Pan American Union for further study for possible action at the next conference, five years hence.

Due to the strenuous efforts of Green Hackworth of the United States Department of State, the subcommittee held up its recommendations to give him time to consult Secretary Hull.

While Mr. Hull does not insist on adoption of the United States pact verbatim, it is doubtful if he would favor postponing action for five years with the world in its present state. It is unlikely, however, that the United States delegation would put up a battle for this if assured that progress was being made toward a satisfactory solidarity declaration.

Hull Deplores Stress on Rift

While withholding comment on that situation, Mr. Hull, it is understood, deplores the tendency to represent the understandable struggle of ideas as to how desirable solidarity is and how far it can be practicably expressed in writing as a struggle between men and nations.

In this respect the United States delegation is trying to prevent labeling the Argentines the "bad boys" of the conference, especially in the eyes of the bloc of thirteen that wants to thresh the matter out to the finish and compel the Argentines and others to say why they are unwilling to act with solidarity at all times in all circumstances.

A glance at the map will show why these thirteen are more interested in advance agreements of solidarity on the part of the Americas, since some or all of them are most likely to be the battlegrounds of any military aggression against this hemisphere, presuming that the first contest would be for a Pan-America canal.

While no delegate mentions military aggression as an immediate possibility or as a consideration that should sway this conference, it is obvious that is the thought in the backs of their minds. The same vague apprehension of what the future may bring prevents the Argentines, Brazilians and Chileans from showing as much enthusiasm in tying themselves to any step even as mild as a declaration that would represent a blank check to other republics to become involved in foreign adventures that might bring military aggression.

U. S. Delegates Are Cautious

Even those of the United States delegation who feel or believe their path will parallel Great Britain's in any conceivable development are unwilling to say so in advance, feeling that liberty of judgment and ability to decide on the basis of one's own national interests must be preserved at all costs.

Viewing it in this light, it is easy to understand Mr. Hull's insistence that the conference go only as far as all can agree. He is particularly anxious that there shall develop in this hemisphere no minorities feeling themselves cut off from the rest. He wishes above all to prevent the growth of ill-will and resentments among the men present here, all of whom will return to responsible posts in their own countries and most of whom will continue to deal with each other by correspondence.

The practical difficulty the Argentines face is that Foreign Minister José Maria Cantilo has not reached Buenos Aires, being now somewhere in the vicinity of Babiloche, on the edge of the Patagonian Desert, resting. Therefore definite instructions to replace those he left with his delegation last Monday cannot be received for a day or two longer. In the meantime everything will remain at a standstill here, as far as the solidarity issue goes.

ARGENTINES REJECT SOLIDARITY DRAFT

Refuse to Alter Position at Lima—Hull Still Hopes for a Unanimous Stand

By HAROLD B. HINTON
Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 20.—The Argentine delegates to the Pan-American conference announced today, after talking by telephone with the Foreign Office at Buenos Aires last night, that they were unable to alter their position opposing any sweeping declaration of Pan-American solidarity in the face of extra-American aggression.

The conference mediators on this subject, Foreign Minister Carlos Concha of Peru and Dr. Afranio de Mello Franco of Brazil, conveyed this information to Secretary of State Cordell Hull. The latter declared later that the situation was "developing favorably" and that he might have some announcement to make tomorrow.

The deadlock on the conference's most important business has everything virtually at a standstill. Committees and subcommittees are proceeding with the consideration of only minor and relatively uncontroversial matters.

The Committee on Organization of Peace will meet tomorrow morning. It will take up only small subects, as the stage is by no means set to risk a general debate on solidarity.

U. S. Delegates Still Hopeful

Sentiment in the United States delegation is still officially optimistic. It is asserted something will be evolved that will convey to the world the impression that the Americas will act as a unit in case of foreign military, economic or political aggression. The language and method of presenting this idea have never concerned Mr. Hull deeply.

Other delegations are less cheerful, although obviously none yet considers the battle lost. Sources close to the Argentine Foreign Office, however, insist that only unsubstantial concessions can be offered.

The Argentines are represented as [illegible] as any one else in declaring unity of purpose concerning preservation of peace among the twenty-one republics. This would include consultative machinery to implement the Buenos Aires pact of 1936 as long as the

The language and method of presenting this idea have never concerned Mr. Hull deeply.

Other delegations are less cheerful, although obviously none yet considers the battle lost. Sources close to the Argentine Foreign Office, however, insist that only unsubstantial concessions can be offered.

The Argentines are represented as willing to go as far as any one else in declaring unity of purpose concerning preservation of peace among the twenty-one republics. This would include consultative machinery to implement the Buenos Aires pact of 1936 as long as the designated body had no jurisdiction over relations outside this hemisphere. But they have apparently reaffirmed their position that they cannot be parties to any convention, declaration or other instrument that even mentions aggression from outside.

The United States proposal to unite in a single instrument the eight peace pacts affecting the Americas received its final coup de grace today. A subcommittee voted definitely to refer it, with other projects of a similar nature, to the Pan American Union for further study.

Opinion is unanimous outside the United States delegation that Green Hackworth of the State Department made no serious effort to oppose this action as a member of the subcommittee. When the report is submitted to the full committee, Mr. Hackworth will attach a memorandum setting forth the United States' reasons for urging action at this tie and will let the matter go at that, it is stated.

The conference will hold it third plenary session tomorrow afternoon to give formal approval to what few projects have been reported out of committees. There will be a special recess at which the Inter-American Commission of Women and the Peoples Mandate for Peace Committee will be heard.

One Project Ready for Vote

LIMA, Peru, Dec. 20 (AP).—A resolution against recognition of territory gained by force in the Western Hemisphere was drafted today and headed for automatic approval by the twenty-one nations represented in the Pan-American conference.

A subcommittee of the Committee for Organization of Peace approved a draft of the measure, amalgamating projects submitted by Brazil, Argentina, Bolivia and Honduras with existing declarations against such recognition. The draft was passed on to the parent committee for reading before a plenary session of the conference, possibly tomorrow. It is expected to receive automatic approval.

It became known that three separate drafts of a resolution on continental solidarity and defense were developed yesterday and this morning by Dr. Afranio de Mello Franco, chairman of the Brazilian delegation, and Dr. Carlos Concha of Peru, conference chairman, after they sounded out other delegations.

The three versions of the proposal differed slightly in wording because of difficulty over greeing as to the meaning of certain phrases and words—such as whether the Spanish word "seguridad" means security or safety.

One draft, titled "The Declaration of Lima," drew a distinction between aggression from outside the Americas and aggression from within.

In the first case, in event of attack by a non-American nation upon an American nation, other nations of the hemisphere could come to the assistance of the nation attacked without being asked. This is the way the Monroe Doctrine is supposed to operate, with the United States alone assuming the role of the assisting power, however.

In the second case, aggression by an American power upon another American nation, the country attacked would first have to request aid before other American nations would be obliged by the declaration to assist her.

One of the United States delegates said that, whatever draft finally was accepted, the measure would be certain to represent an effective merger of the ideas of several nations and would not be the project of any one nation.

Members of the Washington delegation pointed out that the resolution on non recognition of territory gained by force would not tie the hands of the White House or State Department on territories conquered by Japan and Italy if the future should make such recognition expedient. If it had been made applicable to the whole world, it would have forbidden perhaps recognition of such acquisitions as Sudetenland by Germany.

The measure covers territory gained in any of three ways: by force, threat of force or undue pressure or by other methods.

The subcommittee on coordination of instruments of peace decided to merge Argentine and Chilean projects for improving the system of consultation among American republics.

ARGENTINA OFFERS OWN UNITY PLAN; BARS MAJORITY'S

Would Merely Say a Foreign Menace 'Affects Interests of All' Americas

OTHERS ASK FIRM PHRASE

Want Unequivocal Statement of United Resistance to Threat to Any of Them

12/22/38

By HAROLD B. HI[illegible]

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 21.—Controversy over the Pan-American conference's solidarity declaration narrowed tonight to two proposals. These represented on the one side the wishes of a large majority of the delegations here, and on the other side Argentina's ideas.

The text of the joint draft combining most of the delegations' wishes has not yet been made public. The Argentines, however, gave out a copy of the only declaration their government has authorized them to sign.

As far as can be learned, the joint draft is much more specific than the Argentine proposal, although it does contain concessions to Buenos Aires' viewpoint.

If the majority view carries, the American republics will declare in unmistakable terms their absolute determination to band together against any act or threat of force against any nation of this hemis-

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

phere. They will agree to make common cause and proceed with consultation as provided in the Buenos Aires pact of 1936. Such consultation may be initiated by any American republic.

Alliance Feature Opposed

It is understood that the Argentines have objected that this form of declaration is tantamount to a military alliance. The draftors accordingly, are preparing an additional clause to the effect that combined resistance against armed invasion shall not be construed as an offensive or defensive alliance in the ordinary sense. To this also Argentina is reported to object, arguing that it would amount in fact to the same thing.

Where political interference and propaganda from outside nations are concerned the joint draft would have the republics agree to consult only upon the initiative of the threatened state. It would define such political or cultural aggression as an act by a state or by unofficial organizations having the support of any outside state, provided such activities tend to subvert national institutions.

Compromise Still Sought

Dr. Carlos Concha, Peruvian Foreign Minister ana chairman of the conference, and Dr. Afranio de Mello Franco of Brazil, chairman of the Committee on Organization for Peace, are still trying to reconcile the differences between the Argentines and other delegations.

Several of the more outspoken delegates are openly advocating bringing the joint proposal to a vote on Saturday, letting the Argentines abstain if necessary. However, every effort will be made between now and then to obtain a unanimous adherence to a final declaration for its obvious political and psychological effect.

Secretary of State Cordell Hull and other United States delegates declined to discuss the situation at this stage.

The corridors of Peru's Congressional Palace was filled with whispering delegates during today's

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

plenary session. Every one realizes now that a solidarity declaration wil far outweigh anything else this conference can accomplish.

Omits Essential Points

The proposed Argentine declaration omits several essential points of the United States' draft for a "Declaration of Lima."

The United States' draft, for instance, declares that every action directed toward alteration of peace or independence "is certain to provoke spontaneous and common reaction." The Argentine draft substitutes "affects the common interests of them all."

The Argentine draft omits reaffirmation of continental solidarity, and determination to collaborate in universal re-establishment of the principles upon which that solidarity is based, as provided in the United States' draft.

The Argentine position on this point is tha tsuch a declaration already stands in the conventions signed at Buenos Aires in 1936 and it is not necessary to repeat it. Argentina, however, has never ratified the treaties signed at Buenos Aires, except for the Saavedra Lamas peace pact.

The Argentine draft avoids the declaration proposed by the United States that in case of a threat all American States will resist. The Argentines are willing merely to declare that in such case the American States will proclaim "their common concern and their determination to make their solidarity effective through consultative machinery."

Whereas the United States' draft provides for a meeting of Ministers of Foreign Affairs every two years, Argentina's draft proposes that such meetings take place whenever the Ministers deem it advisable.

ARGENTINE PROPOSAL

Following is a translation of the text of the Argentine project on continental solidarity as officially approved by the Argentine Government and given out this afternoon by the Argentine delegation:

Eighth International Conference of American States:

Whereas, the peoples of America have achieved spiritual unity through similarity of their democratic institutions, their unshakable will for peace, their profound sentiment of humanity and tolerance and through their absolute adherence to the principles of international law, of the equal sovereignty of States and of individual liberty without religious or racial prejudice;

Whereas, on the basis of such principles and will they seek and defend the peace of the Continent and work together in the cause of universal concord;

Whereas, natural solidarity exists among the American republics by virtue of which every action directed toward the alteration of peace or the independence which they enjoy affects the common interests of them all;

Whereas, the Inter-American Conference for the Maintenance of Peace held in Buenos Aires approved on Dec. 21, 1936, a declaration of principles of inter-American solidarity and cooperation;

The governments of the American republics declare:

First, that, faithful to the democratic principles inherent in their institutional regime and their absolute sovereignty, they reaffirm their decided will to maintain and defend those principles against all outside intervention of activity.

Present Treaties Cited

Second, that in case the peace, security or territorial integrity of any American republic is threatened by acts of force of any nature or origin on the part of a continental or extracontinental power they proclaim their common concern and their determination to make their solidarity effective by coordinating their respective sovereign wills through the procedure of consultation established by existing treaties and declarations of inter-American conferences, using the means which the circumstances in each case make advisable.

It is understood that the governments of the American republics will act independently in their

Delegates Unanimously Adopt Cuban Project in Slightly Weakened Form

12/23, 38 - Pan Am

By The Associated Press.

LIMA, Peru, Dec. 22. — The twenty-one republics of the Western Hemisphere proclaimed tonight their "decision to maintain and to defend" their continental solidarity "against all foreign intervention or activities."

Persecution Condemned

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 22.—The American republics declared today at a plenary session of the Pan-American conference their conviction that "all persecutions from racial or religious motives which place a number of human beings in the impossibility of obtaining a decent livelihood are contrary to all its politics and juridical rules."

The resolution finally adopted was a slightly weakened version of the Cuban project introduced at the beginning of the conference. For obvious reasons there were no dissenting votes either in committee or at the plenary session.

"Democratic conceptions of the State," said the declaration, "guarantee to all individuals the essential conditions for development of their legitimate activities on a dignified basis. * * * Said principle of human solidarity shall always apply."

Second Such Gesture

This is the second gesture the conference has made directed specifically against the totalitarian systems of Europe. The first was an economic resolution pledging maintenance of liberal foreign trade policies.

With the expected declaration of solidarity of the Americas against external aggression, these will probably complete the pattern the Western Hemisphere wants to present to a changing world at this stage.

The conference voted fresh adherence to the policy of non-recognition of territory acquired by force. The debates surrounding its consideration in committee showed that it was aimed chiefly at situations outside the Americas.

Late this afternoon the secretary general of the conference sent to all delegations the text of a new project for a declaration of continental solidarity upon which it is hoped to obtain unanimous agreement.

This is the fourth draft for a proposed "Declaration of Lima" that the delegates have studied since the conference began. It was drawn up today in the course of several private conferences among half a dozen delegations. If it is finally approved, it will come before the delegates as a conference project, not as a proposal of any one delegation.

The conference voted fresh adherence to the policy of non-recognition of territory acquired by force. The debates surrounding its consideration in committee showed that it was aimed chiefly at situations outside the Americas.

Late this afternoon the secretary general of the conference sent to all delegations the text of a new project for a declaration of continental solidarity upon which it is hoped to obtain unanimous agreement.

This is the fourth draft for a proposed "Declaration of Lima" that the delegates have studied since the conference began. It was drawn up today in the course of several private conferences among half a dozen delegations. If it is finally approved, it will come before the delegates as a conference project, not as a proposal of any one delegation.

A spokesman for one delegation which participated in today's drafting said the Argentine delegates had made many concessions since its original project and had gone a long way toward the point at which it is hoped their viewpoint would merge with that of other delegations who wanted to go further than Argentina was willing to go.

It was hoped tonight, therefore, that the Argentines would see their way clear to signing the new draft. They asked Buenos Aires tonight for further instructions.

The fact that Argentina has taken the leadership at the Pan-American Conference on a viewpoint toward continental solidarity that differs from the viewpoint of the United States should not be interpreted as indicating any unfriendliness toward the United States, according to members of the Argentine delegation.

A spokesman for the Argentine delegation told this correspondent that the difference is merely one of how far the two countries are willing on the question of binding themselves today to take a certain prescribed attitude toward conflicts that may arise in the future under circumstances that cannot possibly be known now. This spokesman explained the Argentine viewpoint as follows:

"Any one who knows history knows that American solidarity always has been one of the most important foundations of Argentina's foreign policy.

Stands in Past Cited

"There have been a half dozen occasions in our history when American nations have found it desirable or necessary to stand together. On all those occasions Argentina has been one of the first to take a firm stand, which proved her adhesion to the principle of American solidarity. It is certain that whenever in the future American nations find it desirable to stand together Argentina will be with them.

"But we cannot take any action at this conference that will tie our hands as to how we shall express our continental solidarity in some crisis several years from now. Our position at this conference does not mean any breaking down in the very strong friendship that has bound us to the United States ever since the inauguration of President Roosevelt's good neighbor policy. Would not we be fools to cut ourselves off from the great democracy of the north, with which we have so many things in common?

"We now have an American naval mission organizing our naval war college at Buenos Aires. We have a large commission of United States Army fliers instructing our Air Corps. Our relations with the United States are more cordial than ever before. We are sure that the United States is not going to misinterpret our insistence to follow at this time a policy that the United States has always followed in its foreign relations—freedom of action to decide how to handle a situation when and if it arises.

"We are perfectly willing to join all other delegations now here in the strongest possible declaration of American solidarity. We are objecting only to signing any agreement that we will take only one prearranged line of action in some crisis that may arise ten years from now. The American and Argentine delegations have consulted daily, sometimes almost hourly, between ourselves and also with all other delegations in an attempt to bring our different viewpoints as close together as possible.

Delegation Still Hopeful

"We are still hopeful that it will be possible to reach a complete agreement on a declaration that all delegations will sign. But if we do not succeed in doing this it does not mean any political difference with the United States nor anything else that could affect our present very satisfactory and happy relations."

As regards the Argentine spokesman's statement that Argentina always has and probably always will take an immediate and categorical attitude on any question involving American solidarity, it is recalled that as recently as two years ago Argentina pledged to use its army and navy to assist a neighboring country if assistance was required.

During the incident growing out of the United States project to lease destroyers to Brazil, Dr. Carlos Saavedra Lamas, then the Foreign Minister of Argentina, gave out a statement of the Argentine position in which he said that Brazil must know very well that if it were threatened with attack by a non-American country it could depend on Argentina rushing its entire armed force to assist in repelling the invaders.

LIMA, Peru, Dec. 24.—The Eighth Pan-American Conference crowned its labors today with the unanimous announcement that the republics of the Western Hemisphere intend to make common cause in the face of a threat to the peace, security or territorial integrity of any one of them whatever may be the nature of the acts deemed threatening.

This document, known as the Declaration of Lima, will stand, if the hopes of the sponsors are realized, as a warning to totalitarian or other non-American States that the western republics will close ranks if menaced by military, economic, political or cultural aggression.

Secretary of State Cordell Hull took the floor to hail the declaration as evidence of an unprecedented feeling of solidarity and as recognition that American institutions and the absolute sovereignty of each American nation were necessary for every republic in this hemisphere.

He asked those who were inclined to belittle the results of the conference to lift their eyes and look at the political turmoil, strife and poverty that curse so many parts of the world and to contrast such conditions with the solidarity of the Americas as exemplified at Lima during the last fortnight.

Democratic Spirit Stressed

Mr. Hull pointed out that the last decade has proved that clarity and steadiness of spirit and will count more than declarations and agreements in urging the delegates to return to their homes determined that their countries make full contributions to their declarations. This was a polite reminder that in the past high-sounding resolutions, even treaties of Pan-American conferences, have not been translated into domestic legislation in a majority of cases.

He stressed that the principles of democracy, tolerance and equality, that the American republics practice in their relations with each other, be equally applicable to the whole world and that the new world was not cutting itself off from any other portion by proclaiming adherence to these basic tenets.

The book of history is never closed, the Secretary of State said, and the Americas may hope for a universal system of order under international law, where force was not needed just as force was not needed to maintain friendly relations between the sovereignties represented at the Pan American Conference.

Landon Congratulates Parley

Toward the end of the session Alfred M. Landon added his congratulations to the conference, assuring the delegates that the United States policy of cooperation, mutual advancement and security of the Americas would be continued irrespective of the political party in office. He deplored the emotional and physical disturbances in certain parts of the world, which he likened to a hurricane, of which no man knows the course.

The steps that the American republics are now taking, he said, should contribute toward making the future of the Americas one of security, not tragedy. They are seeking passage through the present difficulties without conflict or war, Mr. Landon declared, and to that end they wish to turn aside any influence disturbing their peace, creating dissession among them or confusing their national life.

Starting nearly two hours after the scheduled meeting time because the heads of delegations were detained at the meeting of the steering committee, the opening bell saw every seat on the floor and galleries occupied. After the secretary had read the solidarity declaration and had commended the conference's favorable action unanimously by the twenty-one chief delegates, the Argentines started a demonstration, applauding and standing in their places.

Other Delegates Join In

The other delegates rose until finally the entire hall, including the galleries, was filled with standing, cheering men and women. Whatever the Declaration of Lima may mean to the outside world it meant great relief and gratification to the men who have been laboring on its composition for more than two weeks. When Mr. Hull rose to speak he drew prolonged applause, for most of the delegates present knew how largely his patience, skill and ability as a negotiator had contributed to the final result voted tonight.

The next speaker was Alfranio de Mello Franco, head of the Brazilian delegation. On the way to the rostrum as he passed Mr. Hull's seat he stopped and shook Mr. Hull's hand and congratulated him, whereupon there was another outburst of enthusiastic applause for the Secretary of State. Mr. de Mello Franco spoke along the lines of the formal statement that the Brazilian delegation had given out earlier in

The other delegates rose until finally the entire hall, including the galleries, was filled with standing, cheering men and women. Whatever the Declaration of Lima may mean to the outside world it meant great relief and gratification to the men who have been laboring on its composition for more than two weeks. When Mr. Hull rose to speak he drew prolonged applause, for most of the delegates present knew how largely his patience, skill and ability as a negotiator had contributed to the final result voted tonight.

The next speaker was Alfranio de Mello Franco, head of the Brazilian delegation. On the way to the rostrum as he passed Mr. Hull's seat he stopped and shook Mr. Hull's hand and congratulated him, whereupon there was another outburst of enthusiastic applause for the Secretary of State. Mr. de Mello Franco spoke along the lines of the formal statement that the Brazilian delegation had given out earlier in the day, saying that Brazil wanted a stronger declaration, but having asked for a stronger one could not decline a weaker one, even though not entirely satisfactory.

Spirit of Declaration Cited

He said, however, that the real contents of the declaration would be found in its spirit, that in effect it really means an agreement by the American countries to come to the mutual assistance of each other whenever their institutions were threatened. He said that peace provided a better machinery for achieving peace than does force.

Today's two plenary sessions were intended to complete the business of the conference and the delegates hope to meet only once again, on Tuesday, to hear a few valedictory speeches and to sign the final act setting forth the conference's conclusion.

The morning session was largely routine. The fireworks were reserved for the meeting late this afternoon. The delegates passed thirty-six projects dealing with cultural relations, approved a series of technical conferences in the near future and named Bogota as the seat of the ninth Pan-American conference to be held in 1943.

As the result of the various measures approved at Lima the Americas have resolved to uphold their political independence by the consultative method, provided for a declaration of economic independeenc by Secretary of State Cordell Hull's resolution endorsing liberal trade practices as opposed to the barter method, provided for their cultural independence by banning racial and religious persecution, special rights for minorities and the exercise by foreigners of political rights conferred by the country of origin.

The conference has also inaugurated annual conferences of the American finance ministers, which might become highly useful organization to stabilize Pan-American currencies. The first of these meetings will be held shortly in Guatemala. It has encourage the exchange of music, books, pictures, students, profesors and other projects to aid inter-American understanding. It has attempted to standardize consular invoices, im-

110 PROJECTS VOTED BY PARLEY AT LIMA

Picture of Unity Is Presented to Foreign Observers as Synthesis of Efforts

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 25.—The projects approved by the Pan-American conference numbered 110, a check by the United States delegation showed today. In thirteen working days the gathering studied and approved that number of resolutions, declarations or recommendations while no treaties, conventions or protocols were adopted.

A mere statistical analysis does not give an idea of the wide range of subjects covered. Perhaps the extremes are represented by the Declaration of Lima, which is intended to construct a Pan-America front against foreign interferer with the status quo, and the thorization of a contest to find appropriate hymn to peace.

In between, the conference made all sorts of recommendations covering women's rights, freedom of association and freedom of expression for workers, preservation of wildlife and beauties of nature and inter-American copyright. It gave its blessing to a number of technical meetings such as the Inter-American Penal Conference.

How Conferences Work

That is the way that Pan-American conference work. The delegates arrive, enthused over particular ideas that they or their governments want advanced by concerted action of all the republics. Quickly they discover that others have different or perhaps opposed notions, no matter how apparently uncontroversial is the subject. The subcommittees then become verbal battlegrounds from which the victors emerge with the tattered remnants of their pet projects and on

THIS PAGE IS UNCALSSIFIED

these the conference stamps its approval.

Secretary of State Cordell Hull made no comment today on the results of the conference, saying that he had expressed his estimate of its achievements in last night's speech. He spent a quiet day with a motor ride and a visit to several museums.

Eighteen members of the delegation staff labored collecting the English texts of the projects in preparation for their signature as the final act of the conference on Tuesday.

From their tabulation it was apparent that the Pan-American Conference had attempted to construct a protective shell against political change from foreign sources through the solidarity declaration, the condemnation of racial and religious prosecution and the denial of political rights to minorities collectively organized.

Field Widened

With the Chileans abstaining conference widened the field consultation provided in the solidarity declaration by a separate authorization of consultation in case of an economic or cultural crisis, which might mean anything. The Mexicans, however, seeing a possibly embarrassing trend, proposed, and succeeded in having passed a motion that such consultation should never contravene the existing non-intervention pacts.

These and other details, however, hardly detracted from the main outlines of the picture that the delegates intended to paint. This was that the conference should represent a view of the united Americas to foreign eyes that have been hunting some other impression.

The United States delegates celebrated a tropical Christmas in a leisurely manner, induced by the high temperature, brilliant sun and gorgeous flowers.

Several staff members saw their first bull fight and returned from it with mixed emotions. The Lima authorities had arranged a special Corrida for Christmas, importing Victoriana de la Serna from Spain as the star matador.

Others profited by the quiet day to have lunch at the Country Club or other outlying resorts. Some swam, while others inspected the Pachacamac Inca ruins near Lima. These the government has recently put into condition to give a good idea of pre-Spanish civilization.

"SOLIDARITY" AT LIMA

From this distance, at least, it seems that the Pan-American Conference at Lima has become involved in an unnecessary deadlock. The question at issue is whether the conference shall proclaim a doctrine of continental "solidarity" in the face of threats of external aggression, and if so in what words. Here the Argentinians make it clear they do not wish to go so far as we do, and we in turn do not wish to go so far as Ecuador and Venezuela and a number of other nations wish to go. The question is of some importance from the point of view of sentiment and prestige; but it is of less importance so far as any immediate danger is concerned. The only two non-American Powers which now have a foothold in Latin America are democratic France and democratic England, neither of which can be suspected of desiring fresh conquests in this hemisphere. As for the aggressive totalitarian nations: they would need not only to acquire air bases much closer to the South American coastline than any bases which exist today, but also sea power with which to consolidate any gains achieved by striking through the air.

The possibility of their acquiring such bases and such power is no doubt something for us to think about and plan to meet. But at this moment the real danger to the solidarity of the American nations is not an external danger, but an internal danger. It lurks in the possibility that strong minority groups of Germans or Italians or Japanese in some of the South American countries will attempt to form a state-within-a-state. It also lurks in the possibility of an open quarrel between the American nations themselves over some question of property rights on which they do not see eye to eye, as the United States and México do not now see eye to eye in the matter of land seizures. These are the real dangers to "solidarity" in the Western Hemisphere, and they are the dangers which the delegates at Lima ought to be thinking about.

The Brazilian delegation has brought forward a plan which could readily be made an instrument for dealing in an effective way with the first of these two problems, since it begins with the proposal that all the American nations guarantee not to accord special status of any kind to racial or national minorities within their borders. But not even a beginning has been made, so far as the record shows, in dealing with the second problem: the question of how to stimulate the investment of idle North American capital in the South American nations which so badly need it and how to assure this capital that its rights will be respected when it is used constructively. Perhaps some progress is being made behind the scenes in dealing with these questions. There is every reason to hope so.

AGREEMENT AT LIMA

When the Eighth Pan-American Conference adjourns tomorrow at Lima it will leave behind it a far more impressive record of achievement than seemed likely to be the case a week ago. At that time the conference was deadlocked over the drafting of a resolution expressing the "solidarity" of the twenty-one American republics. The question at issue here, however, was plainly one of method rather than of purpose, for while the chief opposition to a strong resolution came from the Argentine Government, no government represented at Lima had stated in stronger terms its faith in the principles of Pan-Americanism. It was the Argentine Foreign Minister who declared that "American solidarity is a fact that nobody can or will doubt. We are prepared to repel * * * anything that implies a threat to the American order, any introduction of men or ideas that reflect and tend to establish in our land and in our spirits ideas foreign to our idiosyncrasies, ideals in opposition to ours, regimes against our liberties, theories dangerous to the social and moral peace of our people, political fanaticisms and fetichisms which cannot prosper under the skies of America."

The resolution upon which unanimous agreement was ultimately obtained is a resolution drawn in the spirit of this statement. To be known henceforth as the Declaration of Lima, it reaffirms the loyalty of the American nations to their own republican institutions, proclaims "their common concern" in the presence of new dangers and pledges them, in the event that the peace or security or territorial integrity of any one of them is threatened, "to make effective their solidarity, coordinating their respective sovereign wills by means of the procedure of consultation * * * using measures that in each

THIS PAGE IS UNCALSSIFIED

case circumstances may make advisable."

This is a plain notice that the American nations recognize an identity of interest, but it is by no means the only evidence of such recognition furnished by the Lima Conference. Other resolutions were adopted which are in some ways of even larger importance, since they deal with more immediate issues. The conference unanimously agreed to recommend to the governments of all twenty-one republics the enactment of legislation denying special rights to minority groups or the exercise by foreigners of political rights conferred by the countries of their origin. By this action it served notice that the American nations are on guard against any attempt by German or Italian or Japanese groups in any of the South American countries to form a state-within-a-state. The conference also adopted a resolution endorsing Secretary Hull's liberal trade policies, as opposed to Germany's barter system, and declared itself against all such "persecutions from racial or religious motives" as the totalitarian states have instituted.

It is necessary to recognize, of course, that these resolutions will remain mere words until they are translated into action by the various governments concerned. It is also necessary to recognize that even in the sphere of words there were certain pressing problems—the question of foreign property rights, for example—whose consideration had to be postponed until another meeting. Nevertheless, it is clear beyond all doubt that the Eighth Pan-American Conference achieved its main purposes. It has greatly strengthened the ties that bind the nations of this hemisphere and brought them into closer harmony as co-equal partners in the defense of the common interests of the Western World.

PRESIDENT PLEASED WITH LIMA SUCCESS

Roosevelt Says Delegation Accomplished Purpose at Pan-American Parley

NAZIS SEE DEFEAT FOR US

Say South Americans Showed Fear—French Papers Find Victory for Democracy

ROOSEVELT HAILS SUCCESS

Says U. S. Accomplished Aims at Lima—Reich Sees Failure

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 27.—President Roosevelt today termed the Pan-American Conference at Lima, Peru, a great success.

His comment, which under White House rules could not be quoted directly, was brought forth by a question as to his opinion of the results of the conference in the light of comment in some quarters that it had failed.

It did not fail, Mr. Roosevelt said, but rather it was a great success. The American delegation, headed by Secretary of State Cordell Hull, accomplished what it went to Lima to do, he went on. In his viewpoint the accomplishment of that object was a great success.

Previously Sumner Welles, Acting Secretary of State, expressed a similar view. Speaking informally and extemporaneously at his press conference, he expressed satisfaction over the success of the Lima conference.

Achievements of very great significance had been obtained, he said, by the best method possible—the American method of talking things over in a friendly way so as to find a meeting ground of minds. Theh great significance, he added, is that all action taken was unanimous.

He mentioned as of outstanding importance the Declaration of Lima for hemispherical solidarity, the Declaration of American Principles for peaceful relations and the Inter-American Declaration in regard to trade policy.

VIEWS ON LIMA VARY IN LATIN AMERICA

Consensus Is That Parley Served a Clear Warning on Totalitarian States

MEXICAN PAPER SKEPTICAL

Sees Greatest Gain in United States' Recognition of Equality of Nations

12/29/38

BUENOS AIRES, Argentina, Dec. 28 (AP).—A considerable portion of the public and press of leading South American capitals has expressed the belief that the eighth Pan-American Conference, which closed at Lima, Peru, yesterday, served an unmistakable warning on Germany, Italy and Japan to keep out of the Western Hemisphere.

Many representative newspapers and public figures have indicated,

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

WASHINGTON, Dec. 27 (AP).—The Brazilian Ambassador, Mario Pimentel Brandao, said today the results of the Lima conference were "far better than many persons had expected."

French Press Hails Success

PARIS, Dec. 27 (AP).—The French press today unanimously hailed the Pan-American conference at Lima, Peru, as a "victory for democracy."

The Journeé Industrielle, which reflects the interests of big business and industry, called the Lima declaration of solidarity a "triumph of the democratic idea."

"A new league of nations is born in America," the newspaper said.

The Rightist newspaper Petit Journal expressed the hope that the conference would lead the United States to state "clearly and firmly" that Washington would side with Great Britain and France if they should be attacked by dictatorships.

The Communist Deputy Gabriel Peri wrote that the Lima declaration constituted a "bitter defeat for supporters of the Munich agreement" of Sept. 29.

Berlin Press Sees Blow to U. S.

BERLIN, Dec. 27 (AP).—The Berlin Nachtausgabe today led a chorus of Nazi afternoon newspapers representing the Pan-American conference at Lima, Peru, as a failure for the United States.

Under such headlines as "The dollar rolled in vain" and "Roosevelt had bad luck at Lima," this Nazi organ declared:

"Roosevelt, in closest collaboration with certain Jewish banks of New York, for years has been pursuing a policy of conquering South America with dollars. In Lima, however, Roosevelt had bad luck. He had worked on South America with strong financial means.

"Roosevelt, however, ran up against unexpected resistance. He could not even scare the South American States with the alleged 'Nazi danger.'

"Roosevelt went completely into the camp of the Jews, of money democracy, of the imperialistic conquest of South America."

Propaganda Minister Joseph Goebbels's newspaper, the Angriff, declared that "the Lima failure is extremely embarrassing but has a sobering effect on the United States."

"The United States' frontal attack failed on account of the resistance organized especially by Argentina," it added.

"Washington went to Lima with a large program and the gentlemen from Washington are now returning more than disappointed," commented the Berliner Zeitung am Mittag.

"They had believed they could return with 'a league of American nations,' with an inter-American court of justice and a military alliance of Latin America and the United States.

"One point was overlooked: South

however, that they fail to see any threat of armed invasion from those quarters. Therefore they are not inclined to favor a military alliance with the United States, which they fear might draw them into a major war.

Important newspapers like the Nacion, the Prensa and the Critica of Buenos Aires, the Noite of Rio de Janeiro, Brazil, and others of Santiago, Chile, and Montevideo, Uruguay, despite a few discordant notes, agreed on the principle of continental solidarity against aggression as reached at Lima. Still there was some disagreement whether the expression itself—The Declaration of Lima—was a strong enough repudiation of totalitarianism.

Foreign Minister José Maria Cantilo of Argentina objected to one newspaper's view that his opposition to a binding Pan-American alliance system had given the totalitarian powers a chance to assert the principle of continental solidarity was a failure.

"Whoever reads my speech before the conference Dec. 10 will find little enough basis for such a claim," the Minister retorted.

Nevertheless the Critica, with a circulation of more than 600,000, regretted the failure of the Lima conference openly to condemn military dictatorships in Europe and Asia.

The conservative Nacion, on the other hand, held that nations of South America like Argentina could not afford to turn their backs on Germany and Italy, with whom they maintain close commercial ties and from whom they receive many immigrants.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

America has long since outgrown the children's shoes which Washington still assumes the 'sister republics' are wearing.

"As a result, nothing but a vague declaration resulted which centered about the demonstrative emphasis upon South America's independence."

Wireless to THE NEW YORK TIMES.

BERLIN, Dec. 27.—Relative pleasure was expressed in German circles today over the outcome of the Lima conference, and its work is viewed as a rebuke to the speculations of "certain Washington groups and a defeat for the United States generally."

The conference, it is contended here, suggests that South American nations do not see eye to eye with the United States on what is termed an all-too- orthodox interpretation of the Monroe Doctrine. The attitude of the South American States is accepted as an unmistakable indication that they fear they may be coaxed into an anti-German bloc, political and economic.

To that extent the anti-German statements of Harold L. Ickes, Secretary of the Interior; Senator Key Pittman and otheh American leaders areb elieved to have reacted on their authors. At any rate informed quarters here take it for granted that South Americans will refuse to be "hoodwinked" by a German aggression bogey and other anti-German propaganda.

Attention is also directed to an aspect of the Pan American problem that is held here to be generally overlooked in the United States—namely, consideration of the determination of other European nations, principally Britain, France and Italy, to develop and conserve their South American economic interests quite as resolutely as Germany. Furthermore, it is contended the South American States at Lima also desired to voice their opposition to what is here termed an attempt at political and economic domination exceeding the limits of benevolent paternals.

The Monroe Doctrine, as interpreted here, does not envisage a situation in which South American States would be expected, because of moral considerations or as an accommodation to the United States, to sacrifice economic or friendly relations with European powers. The anti-German campaign in the United States, it is asserted here, could not, therefore, fail to react on the Lima deliberations, the results of which impressed German quarters as a diplomatic as well as moral defeat for American diplomacy.

The German press believes United States aspirations have been thwarted and "when Secretary of State Cordell Hull returns to Washing-

Representative opinion, expressed in large public meetings of the leading political parties in Buenos Aires, Montevideo and Santiago, ranged between these two points of view.

Mexican Paper Skeptical

Wireless to THE NEW YORK TIMES.

MEXICO CITY, Dec. 28.—The newspaper Universal points out editorially that almost three-quarters of the Declaration of Lima is intended to reinforce the non-intervention principle approved at Montevideo, Uruguay, five years ago. This, it asserts, shows that the main efforts of the United States delegation were aimed at indorsing with the maximum guarantees possible the Good Neighbor policy, based on acknowledgment of equality and reciprocal respect among the American nations.

The United States, it adds, must have realized that no community ideals or interests were possible unless full confidence prevailed among all. This the paper held to explain reiterated statements in the Declaration of Lima of the decision not to interfere in the internal politics of weak nations.

Under the headline "Useless Congress" the Excelsior admits Secretary of State Cordell Hull's diplomatic ability to avoid complete failure in the United States's efforts but insists that for President Roosevelt's proposals there were finally substituted vague sentences signifying only courtesy toward the United States.

Vatican Paper Laudatory

VATICAN CITY, Dec. 28 (AP).—The Osservatore Romano, Vatican newspaper, said today that the Pan-American Conference's declaration of "spiritual unity" and 'equality among nations and individuals without prejudice to race and religion" would live in the history of civilization.

The newspaper's comment on the meeting just concluded at Lima, Peru, written by its director, Count Giuseppe della Torre, was in contrast with declarations of the fascist press that the conference was a failure. After noting that some commentators had said the conference was "shipwrecked," the Osservatore said:

"It may be that such a conclusion reflects prejudice and artifice rather than reality: A vast program may have been imputed and anticipated in order that it might afterward be said that it melted away while crossing the equator from North to South."

Outcome "Alarms No One"

BERLIN, Dec. 28 (AP).—The German Foreign Office mouthpiece, the Diplomatische Korrespondenz, asserted today that the United States had failed at the Pan-American Conference in Lima, Peru, and that the outcome "alarms no one."

"The Lima resolution alarms no one. There is, indeed, no country so foolish as to attempt what the American States declare they will not tolerate."

ARGENTINE FAVORS CONSULTATION IDEA

Foreign Minister Holds Time to Confer Is When Some Actual Threat Arises

DOUBTS 'NAPOLEONIC ERA'

Cantilo's Views Are Set Forth by Radio Representative on Basis of Interview

A statement from José María Cantilo, Foreign Minister of Argentina, explaining why his nation was opposed to the attitude of the United States at the International Conference of American States at Lima, Peru, was broadcast last night over the Columbia Broadcasting System network.

The Foreign Minister was quoted as stating that he opposed Secretary of State Cordell Hull's suggestion for a Pan-American pact against the totalitarian States of Europe until a nation from the outside "really threatens us." He also suggested that the assumption that outside nations were preparing to attack Latin America might be the very best way to encourage them to carry out such ideas.

Señor Cantilo's statement was reported by Dr. Samuel Guy Inman, Columbia Broadcasting representative, at the conference. Speaking in a short wave hookup from Lima Dr. Inman said he had interviewed the Argentine Minister for ten minutes before Señor Cantilo sailed on his return to Buenos Aires yesterday.

"Mr. Hull seems to get his key from what is happening outside this continent," Dr. Inman quoted Señor Cantilo as having said. "He expresses fear of what Europe or Asia, with their new ideologies, might do to America; so he wants us to arm.

"I get my key from America itself. I say our business is to go forward in building our American life in the American spirit. When a nation from the outside really threatens us, then is the time we are to take decisive and united action to defend ourselves."

Señor Cantilo replied, in answer to a question from his interviewer, that he did not see any immediate threat from totalitarian States and that he did not believe that Chancellor Adolf Hitler of Germany was "starting off on a second Napoleonic era," as suggested by the interviewer.

"What I do think," he was quoted as saying, "is that America ought to stand solidly together for its own development. Our program ought to be drawn, not because we fear an outside enemy, but because we want to make a strong America."

Señor Cantilo pointed out that there were many Italians, Spanish, French, Germans and other Europeans in South America and said that Europe was important as a market for South American nations.

"The United States buys practically nothing from us," he was quoted as saying. "How can we expect to forget all about the people who give life blood to our nation and buy our products?

"We believe in a strong declaration concerning continental unity. Whenever that unity is threatened from the outside continents, then will be the time for us to decide together the steps necessary to defend ourselves."

TREASURY WOULD AID AMERICAS' TIES

Morgenthau Proposal Intended to Lift Trade Barriers

By TURNER CATLEDGE

WASHINGTON, Dec. 17.—Many exporters in the United States no doubt were highly elated over the indication given this week by Secretary Morgenthau that financial steps were being planned to increase the flow of commerce between the Americas.

The Secretary's suggestion that remedies were being concocted at this end for certain difficulties of international exchange confronting some of the Latin-American countries, possibly going to the extent of advancing loans from the United States, could hardly have been anything but welcome news to shippers and their agents, not only of this country but also of the other free-currency nations who have had to see their orders dwindle for sheer want of exchange for remittance back home.

Yet what is planned is no special service to American exporters. If trade, and trade alone, were involved, our business houses might be left to their own devices, with such incidental help as they can obtain from the Bureau of Domestic and Foreign Commerce, just as they have been left during the last few years when, largely for want of suitable exchange and barred from barter by the Hull trade policies, they have witnessed in comparative helplessness the inroads of Germany and Japan upon the growing market of the southern republics.

Practical Limitations

Indeed, there may be immediately definite limits to the Latin-American market, whatever we might do by way of bolstering it with artificial stimulants.

Moreover, if we take a practical view of the situation from our own side, there are limits as to what we can do. For instance, it is extremely doubtful that anything like a United States Government loan for purchase by those countries of United States products could be arranged or even would be sanctioned by Congress or our administrative heads.

In the first place, such a special arrangement would be dangerously near a violation of what might be called the "moral" clauses of the Hull trade agreements. Moreover, it would invite Germany, Italy, Japan and possibly Great Britain to retaliate with such measures as they had at hand.

No. The objective involved is not trade alone. The suggestion made by Mr. Morgenthau this week, or rather the purpose behind it, ties in with the objectives our agents are now forwarding at the Lima conference.

Basically, they are to establish between the United States and Latin America a bond of common interest, a bond composed of trade ties, cultural ties, personal friendships among leaders, and any and all other affinities that might be developed here or in Pan-American conferences, to the end that the Americas will be compelled by sheer mutual self-interest to present a solid front against all aggressions from abroad, be they military, ideological or commercial.

Political Manifestations

In short, Mr. Morgenthau's suggestion, together with the dispatches from Lima and the discussion of our own plans for hemisphere defense, called attention to the modernization, the implementation, even the practical application, of the Monroe Doctrine which are going on today.

By every rule of international intercourse, however, the trade tie is the strongest of those that make up whatever bond we now have or may develop with Latin America. Unfortunately, perhaps, it was one which we had taken too much for granted, realizing as we did that this country consumes by far the largest portion of Latin-American exports.

This assumption was exploded a few months ago when we awoke to find that Germany was challenging our superiority in a number of our neighboring countries and that Japan and Italy obviously were preparing to contest us, too. The new situation was impressed upon us by the assertiveness of German minorities in certain of the countries, particularly in Brazil, and by the outcroppings of anti-republic political manifestations in various places.

Confronted with these things, many of our people became hysterical. Many could see the United States as being rapidly displaced in the trade of the Southern countries, and with every package of German goods they could see a heavy consignment of alien political doctrine. The change in the Brazilian form of government came along a little more than a year ago, seemingly to justify all this fear and hysteria, and today we find the United States generally worked up over our relations, commercial as well as political, with our Latin-American brothers.

No Corner on Trade

If our new agitation over Latin America serves no other purpose, it may enable us to substitute knowledge for the assumptions many of us have had relative to our commercial relations. It was erroneous to take for granted, in the first place, that we had anything like a corner on Latin-American trade to start with, or even that Germany was gaining an entirely new or unnatural position in its markets.

The United States trade with its Southern neighbors has been one marked chiefly by its recent growth. Before the World War, for instance, this country was third as a supplier of the South American continent, being bested by Great Britain and Germany. It is true that even then the United States ranked first as the export market for most of the South American countries, but that was because we wanted and needed the noncompetitive products which they offered us—coffee, cocoa beans, nitrates, copper and the like.

Commercial Myopia

It was another misconception, held by some of our less practical people, that our Southern neighbors owed us any special concessions because of the mere fact that we were neighbors in a hemispherical sense, or that we were in some manner an empire held together by the loosely defined Monroe Doctrine.

It was no doubt due in part to this erroneous idea that some of our exporters were slow to meet competition in those fields as they would have met it at home.

Many observers of the Southern countries have concluded of late that if North American business firms only used the same methods of attracting buyers in Latin America they use at home, they no longer need fear the competition from across the seas; and, further, if they employed more nearly the same methods of advertising they employ here, particularly the programmized radio appeal, the political agitation from the dictator countries would lose its principal audience, to wit, the people who are attracted by entertainment.

But there is a present misapprehension as to our trade position in the highly competitive Latin-American markets which should be noted, if it can be noted without our people relinquishing their diligence. It is the misapprehension that this country is already rapidly losing its place of dominance in that trade area.

Purchases From U. S.

An over-all calculation shows that the Latin-American republics purchased more from the United States in 1937 than from Great Britain, Germany, Italy and Japan combined. The share of the United States amounted to 34.4 per cent, as compared with 14.1 per cent for Germany, 12.6 per cent for Great Britain, 2.7 per cent for Japan and 2.6 per cent for Italy. Meanwhile, the United States was by far the best customer of Latin America, taking 31.1 per cent of the aggregate export of the twenty Southern republics.

Trade figures for the first half of 1938 indicate that this country continues to hold its position and even to gain ground in most of the larger Latin-American markets. There is a likelihood, however, that the statistics for the latter months of the year will be somewhat less favorable to the United States, as the European countries have turned their energies more to developing trade with the Southern half of the Western Hemisphere.

The problem before this government is, therefore, how to increase its dominance in the Latin-American markets, practically in behalf of its export trade, but more fundamentally in the cause of Western solidarity. It is a problem of the first order, due to limitations inherent in our political system and in our peculiar relations with Latin America and to the philosophy of our reciprocal trade policies, which, through their devotion to the theory of the most-favored-nations treatment, are meant for the world as a whole and "theoretically" opposed to special treatment of any kind.

Text of Hull's Speech on Achievements at Lima

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 24.—Following is the text of the address made by Secretary of State Cordell Hull at the plenary session of the Pan-American Conference in Lima tonight, as given out by the State Department:

Mr. President, fellow delegates to the Eighth Inter-American Conference, ladies and gentlemen:

In rising to comment on some of the important achievements of this conference, let me first acknowledge a debt of gratitude to one of our number who has labored tirelessly, day and night, with unfailing courtesy, courage and wisdom. His work has guided all of us. Both for myself, personally, and on behalf of the delegation of the United States, I wish to thank Dr. Carlos Concha, president of the conference, a worthy representative of the continent of the Americas.

We have also had the inestimable privilege of sharing the mature experience and high qualities of a great American statesman, Dr. Afranio de Mello Franco, president of the first commission, whose fine judgment and skill have been of immense value in guiding the proceedings. With the statesmanlike cooperation of these and other delegates we have taken in this conference important steps; their significance will appear even larger as the years go by.

Steady Progress Made

No one familiar with the history of the continent can fail to measure the steady progress which has been made through the years. More than a century ago the watchword of the continent was independence. A dream which had grown for a generation flowered at last, and gave birth to the twenty-one nations here represented, pledged to liberty for the individual and to popular government.

These American republics emerged as the great triumph of human rights, a conquest by idealists of this hemisphere. But the task was not finished. In a second stage there was forged the conception of equality of American States, their absolute right as independent nations, irrespective of military strength, of territorial extent, or of number of population, to speak with equal voice.

Yet, even juridic equality, great though it is as a buttress for States, was not enough. There remained to be strengthened the bond of friendship, of understanding and of fair dealing—the bond of good neighborship.

First we become free; then we acknowledge ourselves equal; then we unite in common friendship.

Critical Situation Faced

As the present conference is meeting, we are all faced with a critical world situation. Economic nationalism is making it more and more difficult for people in every country of the world decently to support themselves and their families; social stability is being threatened throughout the world; treaty obligations and international law are being flagrantly disregarded; the resort to persecution, force and violence are threatening the peoples of the world with the destruction and horrors of armed conflict.

We see doctrines of enmity and hatred disseminated through insidious and subversive propaganda. We know that these influences and dangers still haunt the possible tomorrow. It is against this background that we must protect and measure our accomplishments here in Lima, in particular the economic declaration against unreasonable trade barriers, the declaration of solidarity and unity, and the program of principles which is the basis of peace and cooperation among all nations.

The world situation today gives too much evidence of economic aggression and of the use of economic measures as the instruments of political policy. We have reaffirmed our purpose to guide our commercial relationships by the principle of equal treatment and by the reduction of obstacles to trade, in order to facilitate and expand the exchange of goods, principles to which we should like to give universal application.

Integrity of States

In our conference we have demonstrated our unshakable determination to respect the integrity of individuals and of States, to uphold the sanctity of the pledged word and to make needed changes through the orderly process of consultation in a spirit of mutual accommodation.

The maintenance of peace on the American continent and throughout the world is an absorbing subject of interest to any inter-American conference. The deliberations and declarations of this conference prove that the influence of the American peoples is being thrown into the struggle on the side of international peace, justice and fair dealing, and that our nations stand for measures which have the welfare of peoples and not the interest of dominant governing groups for their objectives.

Let us not minimize the true value of the accomplishments of this conference. The advance made is broad and constructive. Our deliberations have added to our common continental faith, new substantive principles and new procedure of consultation.

These deliberations took form in the declaration in this conference of the principles of the solidarity of America, the Declaration of Lima. Closely associated with it are two vigorous resolutions, one offering sweeping condemnation of racial and religious bigotry and intolerance everywhere; the other condemning in this hemisphere the collective political activity of groups of aliens.

Conception of Solidarity

The conception of solidarity was first brought into concrete existence in this hemisphere in the Anti-War Pact of 1933, a conception great in its possibilities but still undefined. This pact recognized that there were common interests and that the unity of the continent was parallel. At the Buenos Aires Conference of 1936 the method of consultation was adopted, through which solidarity might be expressed.

Today we take a further step. We have spent long and profitable days in intimate exchange of views. We have discussed at length the policies and purposes that animate our governments. We have come to know each other's hearts and minds.

Out of these exchanges has come this declaration, this common formulation of our common policy. We have each and every one of us bent somewhat in form and scope to the will, the judgment and the desire of the rest of us, but our broad purpose has united us. We have sacrificed no fundamentals. This declaration comes in that deep sense from the whole of us.

It can be accurately stated that the declaration which the conference approves today, while not dramatized or amplified as to details, contains the substance of the various other proposals advanced by a number of us during the conference.

Conference Method Used

Its formulation illustrates the use and meaning of the conference method. We have proven our ability to use this method successfully and to find thereby the phrases and instruments suitably expressive of our common aims. I like to think that our achievement is in part due to our training in democratic procedure and our tradition of the democratic forms of government.

We recognize in the declaration of Lima our determination to present a common front against any threats or activities from outside forces designed to impair the peace, security or territorial integrity of any country or to undermine the democratic institutions established in this hemisphere.

We have declared that any such threats would be matters of common concern to all of us and have expressed our determination to make our solidarity effective. We have agreed to coordinate our respective sovereign wills by the procedure of consultation, each country acting independently in its individual capacity as an equal sovereign State.

Beginning with the enunciation of the principle of solidarity in the anti-war pact we have piece by piece built a structure of continental solidarity. We have stated in clear-cut language our determination to maintain and defend our principles against any intervention or outside interference which may threaten us, and we have pledged ourselves to consult with one another if confronted with such threats.

Sovereignty a Necessity

We have taken this action in the recognition that American institutions and the absolute sovereignty of each and every country is a necessity for all of us.

An unprecedented feeling of solidarity has been exhibited by the acts and utterances of each and every delegate, including the visiting Argentine Minister for Foreign Affairs, who echoed the views of all when he said:

"American solidarity, gentlemen, is a fact that nobody can or will doubt. All and each one of us is ready to sustain and prove this solidarity, in the face of any danger which, from whatever source, might threaten the independence or sovereignty of any State of this part of the world. * * * It is not only the piece of land which we would defend in a sacred union. We are prepared to repel with the same tenacity, by means of concordant measures of a preventive character, or by combined direct action, anything that implies a threat to the American order, any introduction of men or ideas that reflect and tend to establish in our land and in our spirits ideas foreign to our idiosyncrasies, ideals in opposition to ours, regimes against our liberties, theories dangerous to the social and moral peace of our people, political fanaticisms and fetishisms which cannot prosper under the skies of America."

Joint Effort Favored

I have here quoted words which were on the lips of all delegates alike from the day of their arrival at the conference. Some even desired a military alliance, which my government has at no time favored.

We have also reaffirmed in this conference our faith in peace and justice for all men by our declaration of a program of principles indispensable to world order and peace. These we proclaim, support and recommend to all nations.

If there be any who have not grasped the achievements of this conference, let me again ask them to lift up their eyes and look at the political turmoil, strife and poverty which curse so many parts of the world and which threaten to cast their baneful influence over the continent of the Americas, and then to look by way of contrast at the solidarity, unity and peaceful objectives proclaimed by this conference.

We have all lived through a decade in which many declarations and agreements have proven of little efficacy. We all know that what counts most is the clarity and steadiness of the spirit and the will that commands and guides us. I am sure that you will all return to your countries, as I shall return to mine, with great assurance as regards the will and the spirit prevailing in the American States, and that all of us are determined that our countries shall continue to make their full contribution to the purpose of our declarations.

Lines of Sympathy

All of us reach out, I know, toward peaceful and fruitful relations with all the rest of the world. Each of us has lines of sympathy and interest that traverse the globe more finely than the lines of latitude and longitude. Our bonds are strong with all who seek peaceful friendship and respect those principles of democracy, tolerance and equality by which we live.

The principles of conduct which we have adopted and are carrying out in our relationships with each other are equally open as a basis of relationship with all other countries. It cannot be fairly said that we are trying to shut ourselves off in a hemisphere of our own; any such effort would be futile.

But it can be fairly said that the principles of conduct upon which the countries of this hemisphere have chosen to stand firm are so broad and essential that all the world may also stand upon them. Speaking for my country, we seek universal recognition and support for them.

Were th[illegible] adopted over all the world, a great fear would end. The young would see their future with more certainty and significance. The old would see their lives with more peaceful satisfaction.

Tasks Ahead Are Plain

The book of history is never closed. Already the tasks ahead are all too plain. We still must seek untrammeled freedom of economic life, so that men and nations freely exchanging the product of their hands and heads can attain their greatest economic well-being. We still need a world in which universally there is recognized the system of order under an international law so much respected that force is not needed, just as force is not needed to maintain the several sovereignties of the friendly nations here represented one against another.

There still is needed the moral crusade whereby the soul of every one, even the humblest of our citizens, may be liberated and raised to its greatest capacity, so that each of the many millions on our continent may find his greatest opportunity to serve his country, his fellow-men and his God.

There are those who think the world is based on force. Here, within this continent, we can confidently deny this. And the course of history shows that noble ideas and spiritual forces in the end have a greater triumph.

Tonight, especially, we can say this, for on this night nearly 2,000 years ago there was born a Son of God who declined force and kingdoms and proclaimed the great lesson of universal love. Without force His kingdom lives today after a lapse of nineteen centuries. It is the principality of peace; the peace which we here hope in a humble measure to help to give by His grace to the continents of the Americas.

Text of the Declaration

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 24.—Following is the text of the "Declaration of Lima" as signed by all twenty-one American delegations today at Lima:

Declaration of the Solidarity of America.

Eighth Inter-American Conference of American States.

Considering:

That the peoples of America have achieved spiritual unity through the similarity of their republican institutions, their unshakeable will for peace, their profound sentiment of humanity and tolerance and through their absolute adherence to the principles of international law, of equal sovereignty of States and of individual liberty without religious or racial prejudices;

That on the basis of such principles and will, they seek and defend the peace of the continent and work together in the cause of universal concord;

That respect for the personality, sovereignty and independence of each American State constitutes the essence of international order sustained by continental solidarity, which historically has found expression in the declarations of the various States, or in agreements that were applied, and sustained by new declarations and by treaties in force;

That the Inter-American Conference for the Maintenance of Peace in Buenos Aires approved on Dec. 21, 1936, a Declaration of Principles of Inter-American Solidarity and Cooperation and approved on Dec. 23, 1936, a protocol of non-intervention:

The governments of the American States declare:

First, that they reaffirm their continental solidarity and their purpose to collaborate in the maintenance of principles upon which said solidarity is based;

Second, that faithful to the above-mentioned principles and to their absolute sovereignty they reaffirm their decision to maintain them and defend them against all foreign intervention or activity that may threaten them;

Third, and in case the peace, security or territorial integrity of any American republic is thus threatened by acts of any nature that may impair them, they proclaim their common concern and their determination to make effective their solidarity, coordinating their respective sovereign wills by means of the procedure of consultation established by the conventions in force and by declarations of inter-American conferences, using measures that in each case circumstances may make advisable.

It is understood that the governments of the American republics will act independently in their individual capacities, recognizing fully their juridical equality as sovereign States.

Fourth, that in order to facilitate the consultations established in this and other American peace instruments, the Ministers of Foreign Affairs of the American republics, when deemed desirable and at the initiative of any one of them, will meet in their several capitals by rotation and without protocolary character.

Each government may, under special circumstances or for special reasons, designate a representative as a substitute for its Minister of Foreign Affairs.

Fifth, this declaration shall be known as the Declaration of Lima.

U.S. DRAWS UP PLAN TO UNITE AMERICAS

Scheme Designed to Conciliate Various Viewpoints of the Delegations at Lima

BIENNIAL MEETINGS URGED

Proposal Sets Up Machinery for Putting Into Effect the Peace Machinery of 1936

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 17.—The interest of the delegates to the Eighth Pan-American Conference was concentrated today in a new project circulated by the American delegation for a declaration on continental solidarity to be known as The Declaration of Lima.

The United States proposal for the declaration has been carefully drafted by the delegation's legal advisers and it is designed to conciliate the various viewpoints that have given rise to the highly controversial situation that has existed on this question ever since the conference opened.

It embraces the principal points of the original American proposal which aroused the opposition of the Argentine delegation. It also takes in the compromise suggestions offered by the Chileans, Mexicans and others. From the legal viewpoint it is designed to set up machinery for putting into effect the consultative provisions of the Convention for the maintenance, preservation and re-establishment of peace signed at Buenos Aires, Dec. 23, 1936.

Controversial Point Retained

The American proposal retains the point that caused Argentine opposition—namely, that in the event the peace of any American country is menaced either from without or within by activities of any kind that might appear to impair national institutions, all American governments would be pledged to make their declared solidarity effective and prepare to resist such a threat.

For this purpose they would co-ordinate their independent wills through the procedure of consultations provided for in already existing agreements.

The impression in well-informed quarters close to the Argentine delegation tonight was that Argentina would not accept the American project.

The impression was rather general in conference quarters that the United States delegation was smarting under the widespread charges that it had surrendered the leadership to Argentina on the question of the solidarity declaration and that its new project indicated a firmer stand on this issue.

Several delegations favoring stronger leadership by the United States delegation said this afternoon that the worst that could happen if the United States decides to force the issue is that Argentina might dissociate herself from the solidarity declaration by abstaining from voting. Several persons close to Secretary of State Cordell Hull insisted that he was still in favor of unanimous consent on whatever was done, and they would not hazard a guess that the Secretary of State was preparing for a showdown with Argentina, which several other powerful delegations want to force.

The convention of 1936 provided that in case the peace of any American country was menaced by aggression from a non-American country the American governments would consult for common defense on the ground that a threat to any one would be a threat to all. The convention did not provide, however, how such consultation should be effected.

The new American project, which was sent out to all delegations last night, provided that the Foreign Ministers of all American republics should meet every two years, except in the year in which there is a Pan-American Conference. The place of the meeting is not specified in the American draft.

Argentina has opposed such meetings of foreign ministers on the ground that some of them were prohibited by their constitutions from leaving the country without permission of Congress.

Alternate May Be Named

The American project attempts to get around the Argentine objection on this point by providing that any country may appoint an alternate in place of its foreign minister. It is also provided that the biennial meeting may be postponed or eliminated altogether whenever the governments so decide.

On the other hand special consultations could be called at any time on the initiative of any American government should the occasion arise. These provisons are preceded by a strong declaration in which the American republics reaffirm their continental solidarity and their will to collaborate. They also pledge themselves to resist any threat either direct or indirect to their peace or safety or to territorial integrity on the part of any non-American State.

Project Clarifies Atmosphere

The new American project served at least to clear the atmosphere by bringing the American position out into the open. While the proposed Declaration of Lima sets up the machinery for consultation the Argentine project omits such machinery with the intention that it be the function of the foreign offices in ordinary diplomatic usage. It is understood that the position of the Argentine delegation on this point is the result of the precise instructions that José Maria Cantilo, Argentine Foreign Minister, left.

The American delegation, however, has made the consultative machinery very elastic in order that Argentina may accept it. The Americans still hope that it will be possible to arrive at an agreement with Argentina regarding the Declaration of Lima.

A comparison of the American and Argentine projects shows them to be in agreement as regards the underlying principle of continental solidarity but not in agreement either as regards the form of that solidarity or the name that shall be given the declaration. The American project carries the strong title Declaration of Lima, while Argentina's draft is, for the Expression of American Consciousness and Solidarity.

In this apparently insignificant difference there is clearly indicated Argentina's policy in favor of replacing treaties and pacts with simple recommendations that are not binding. It is a position of prudence which some applaud and some criticize. Incidentally it follows very closely the policy of the United States in refusing to sign any pact or agreement that is likely to entangle it in European or other non-American conflicts at some uncertain time in the future.

Many delegates from all parts of Latin America are disappointed, however, that Argentina is not prepared to take a firmer stand on purely American questions.

LIMA SESSIONS END ON NOTE OF ACCORD

Concha Stresses Unanimity—Hull Sees Unity Based on 'Trusting Friendships'

Texts of addresses by Hull and other diplomats Page 8.

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 27.—The Americas have reached a new epoch in their evolution toward solidarity, Dr. Carlos Concha, chairman of the Pan-American Conference, told the delegates in formally closing their deliberations tonight.

The Peruvian Foreign Minister lauded the Declaration of Lima, the conference's principal accomplishment, as the result of a meeting of minds united in worship of liberty and unrestricted respect for the ideals and viewpoints of others.

Coming from one of the conference's leading advocates of the strongest and most uncompromising sort of solid front in the Western Hemisphere against all future dangers, known and unknown, Dr. Concha's closing speech showed the effects of second thought on the one-time possibility of omitting the Argentines for the purpose of strengthening the terms of the declaration.

Satisfaction Over Unanimity

This proposal was seriously advanced on several occasions last week when it seemed impossible to obtain the Argentines' adherence to any expression strong enough to satisfy the Left Wing solidarity champions. But United States Secretary of State Cordell Hull, Dr. Afranio de Mello Franco of Brazil and other older heads counseled patience until a final formula was evolved.

Now that the heat of argument has cooled down, every one seems happy that a unanimous statement is on record instead of something adopted by twenty votes to one. That obviously would have been tantamount in a small way to reading Argentina out of the hemisphere.

Dr. Concha explained that the different opinions voiced were merely different shades of the same principles professed by all. Present and future interchanges of ideas on this subject, he added, revolve around the best means of accomplishing a common purpose, not around differences in objectives.

The closing session was called ostensibly to permit the chiefs of delegations sign the official final act, embodying 110 resolutions, declarations and recommendations adopted during the sessions. It really pro-

LIMA LEADERS SEEK TO AGREE ON SPAIN

Heads of Parley Delegations Debate Plans for Mediation of the Civil War

RAIN STILL BARS FIGHTING

Nearly 40 Wounded and Ill American Volunteers to Quit Barcelona Today

Special Cable to THE NEW YORK TIMES

LIMA, Peru, Dec. 17.—The heads of the twenty-one delegations to the Pan-American Conference met unexpectedly today in their capacity as steering committee in an endeavor to reconcile conflicting views regarding Pan-American mediation in the Spanish civil war.

Two projects have been presented, one from Cuba, the other from Argentina. The Cubans would establish an intervention committee composed of one plenipotentiary from each American republic charged to offer good offices to both sides in the conflict.

The Argentines would limit the conference's action to an expression of willingness by the American republics to associate themselves with any effort to reach a peaceful solution of the Spanish conflict.

Secretary of State Cordell Hull apparently still intends to keep his promise to vote for any project on which the twenty other delegations can agree, but the Latin Americans are violently partisan on the Spanish issue. Delegations sympathetic to the opposing sides will think the other is trying to favor its side's enemy.

The Chilean delegation is in a peculiar position because the government it represents favors the Rebels, but the new Administration, which will take office next week, will favor the Loyalists.

THE N

LIMA PARLEY SHUNS MEDIATION IN SPAIN

Steering Committee Kills the Proposal by Cuba After Hull Suggests It Be Postponed

PROJECTS ARE VOTED UPON

Group Backs U. S. Pledge for Action on Pan-American Road and on Aviation Convention

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 19.—The eighth Pan-American Conference will not offer mediation in the Spanish War. The steering committee, composed of the chairmen of the twenty-one delegations, voted 18 to 3 this morning that the Cuban proposal for mediation should not go before the conference.

During the discussion on the project, which had occupied the steering committee for several days, Secretary of State Cordell Hull of the United States suggested that the question be postponed. When Dr. Carlos Concha of Peru, presiding, finally put the question to a vote the project was overwhelmingly defeated.

Since it was a project not covered by the agenda of the conference, the action of the steering committee means that Cuba may not present the question in committee or on the floor.

UNITY OF AMERICAS HULL'S PEACE PLAN

Secretary Believes Example May Head Off Catastrophe Elsewhere in World

EUROPEANS ARE BAFFLED

They Find It Hard to Grasp Our Collective Effort After Shunning of League

By HAROLD B. HINTON

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 26.—European diplomats and observers stationed here have been hard put to it to explain in their dispatches concerning the Pan-American Conference the sudden United States conversion to collective security, although it appears to them to be on a small scale.

Those who have watched the League of Nations function in the past two decades are convinced the United States is now trying belatedly to achieve part of what was offered on a silver platter after the World War. This is the French and British view, as far as it can be ascertained locally.

The totalitarians, of course, see the developments otherwise. They believe the attempt to solidify the Americas is directed exclusively at them and they are probably right so far as solidity has been accomplished. Here, as elsewhere in the world, when discussions have arisen concerning threats to peace, Germany is inevitably mentioned, Italy much less.

Find it Hard to Explain

United States spokesmen find it difficult to explain their domestic public opinion, which apparently back Secretary of State Cordell Hull's efforts to bring about agreement among the American Republics to cling together, and think it can be done.

Mr. Hull regards this as his last Pan-American conference and, therefore, has pushed hard to make the greatest advance toward his goal. He views the hangings-back, objections and disagreements as healthful symptoms of growth of the movement he so ardently espouses.

The fact that unanimous agreement is impossible to achieve immediately illustrates the democratic process, the Secretary of State believes, and is evidence that American solidarity, if ever a reality, will be based on consent, not coercion.

It is understandable that Europeans have difficulty in grasping the fact that a man of Mr. Hull's intelligence and ability can still hold such beliefs in the face of the rapid growth of the opposite tendency in other parts of the world,

LIMA, Peru, Dec. 26.—European diplomats and observers stationed here have been hard put to it to explain in their dispatches concerning the Pan-American Conference the sudden United States conversion to collective security, although it appears to them to be on a small scale.

Those who have watched the League of Nations function in the past two decades are convinced the United States is now trying belatedly to achieve part of what was offered on a silver platter after the World War. This is the French and British view, as far as it can be ascertained locally.

The totalitarians, of course, see the developments otherwise. They believe the attempt to solidify the Americas is directed exclusively at them and they are probably right so far as solidity has been accomplished. Here, as elsewhere in the world, when discussions have arisen concerning threats to peace, Germany is inevitably mentioned, Italy much less.

Find it Hard to Explain

United States spokesmen find it difficult to explain their domestic public opinion, which apparently back Secretary of State Cordell Hull's efforts to bring about agreement among the American Republics to cling together, and think it can be done.

Mr. Hull regards this as his last Pan-American conference and, therefore, has pushed hard to make the greatest advance toward his goal. He views the hangings-back, objections and disagreements as healthful symptoms of growth of the movement he so ardently espouses.

The fact that unanimous agreement is impossible to achieve immediately illustrates the democratic process, the Secretary of State believes, and is evidence that American solidarity, if ever a reality, will be based on consent, not coercion.

It is understandable that Europeans have difficulty in grasping the fact that a man of Mr. Hull's intelligence and ability can still hold such beliefs in the face of the rapid growth of the opposite tendency in other parts of the world, but Mr. Hull is regarded by American delegates as a man of long vision.

Three years after the end of the World War he advocated revision of the colonial mandate system in a manner to afford free access by all nations to the world's raw material supplies, and his suggestion might have avoided the contemporary division of the world into "have" and "have-not" nations.

Mr. Hull had been convinced for six years that the European collective system was doomed. Before his first Pan-American expedition to Montevideo, the Secretary of State felt that regional unity, based on geographical community of interests might yet save the world from the catastrophe toward which it appeared headed.

The experience of the London monetary economic conference taught him it was impossible to search out a solution for any problem when all the world's clashing interests were considered together. The thesis that the Americas could work out a system of decent living together as good neighbors because of a lack of innate antagonisms or irreconcilable conflicts of interest has impressed him as more and more practical with the passage of time.

In time this might become part of a world system, according to Mr. Hull's view, but it is impossible now to get more than a start in that direction by showing others how.

Hull Races Against Time

Reduction of excessive trade barriers between nations has been his lifelong vision, and he still believes developments will prove him right. Discouraged Europeans under the spell of the trend of the last five years cannot look beyond the immediate future. Mr. Hull understands this, and it gives him new determination to make the greatest progress possible in the New World before a possible war or other political earthquake shakes Europe, for he wants the Americas to be prepared to pursue together their collective self-interest, whatever that may prove to be.

The cataclysm may even be avoided if the American example proves successful in the eyes of the war-fearing peoples of the world, he thinks, and in any event this hemisphere would be better prepared to withstand the economic and cultural, if not the territorial shocks that another general war might bring.

Right Step, Says Borah

WASHINGTON, Dec. 26 (AP)—Senator William E. Borah today described the Pan-American conference at Lima as "a step in the right direction."

Mr. Borah, ranking minority member of the Senate Foreign relations Committee, added that the twenty-one nations represented at the conference "have their own national consciousness and national spirit."

"We must travel with them and not undertake to lead them," said the Idaho Senator. "We perhaps expected more from the Lima conference than we had any right to expect, and therefore we should be content with what we got."

LIMA

THE NEW YORK TIMES, TU

CURB ON INVESTORS PROPOSED AT LIMA

Diplomatic Protection Held Due Only When the Local Courts Deny Justice

SHIP IMMUNITY TAKEN UP

Experts Urge Government Craft Engaged in Trade Be Treated as Private Ships

12/13

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 12.—The Pan-American conference today received a recommendation that it adopt the principle that foreign investors in Latin America are not entitled to diplomatic protection except in cases where justice is denied to them by local courts.

The recommendation came from a committee of experts on codification of international law, to which the Buenos Aires [Argentina] and Montevideo [Uruguay] conferences submitted several legal questions for study and report at this conference.

Legal experts also urged that American nations refrain from all future attempts to define an aggressor or to apply sanctions. Committee experts told the conference that defining an aggressor and applying sanctions had proved to be the two most likely means of causing war while preaching peace.

Experts Complete Work

The committee of experts on codification of international law met here two weeks before the conference opened and completed the work they had been conducting by correspondence for the last two years. The report they submitted to the conference today covers seven difficult technical legal points.

On some points the experts recommended adoption of a certain and not a legal question and therefore they were unable to rule on it.

On the matter of pecuniary claims of citizens of one country against the government of another, the experts presented to the conference a draft convention covering three vital points as follows:

"First, the high contracting parties pledge themselves without any reservation not to employ armed force for collection of public debts or contractual debts.

"Secondly, the high contracting parties agree not to intervene diplomatically in support of claims arising out of contract, unless there has been a denial of justice or a infraction of a generally recognized international duty.

"Thirdly, in the event of unjustified repudiation or breach of the terms of a contract (mala fides) and failure to settle the claim by resort to local remedies and diplomatic negotiations, either creditor or debtor may demand and obtain arbitration of the issue of unjustified repudiation or violation (mala fides), denial of justice or infraction of a generally recognized international duty."

Enlarge Drago Doctrine

A resolution of the Buenos Aires conference charged the committee of experts with the formulation of principles with respect to the elimination of force and of diplomatic intervention in the cases of pecuniary claims and other private actions. The experts have enlarged the well-known Drago doctrine, which forebade the use of force for the collection of public loans.

This doctrine made no distinction between good faith and bad faith, but merely sought to prevent the use of armed force for the collection of public debt, as was assumed to be the case in Venezuela in 1902. Its sponsor did not oppose other forms of settlement of debt, nor was he defending bad faith in the non-payment of debt.

The experts now recommend that in the matter of public loans or public debts arbitration should be limited strictly to allegations and prima facie evidence of bad faith, such as international withdrawal of guaranteed security, intentional disregard of priorities, preferences and other essential terms or willful repudiation of debt. The report says

Legal experts also urged that American nations refrain from all future attempts to define an aggressor or to apply sanctions. Committee experts told the conference that defining an aggressor and applying sanctions had proved to be the two most likely means of causing war while preaching peace.

Experts Complete Work

The committee of experts on codification of international law met here two weeks before the conference opened and completed the work they had been conducting by correspondence for the last two years. The report they submitted to the conference today covers seven difficult technical legal points.

On some points the experts recommended adoption of a certain procedure as recognized in the principles of international law for American countries. On other difficult points they recommended further study.

The experts recommended adoption of a convention at this conference waiving immunity for all government-owned vessels engaged in commerce. If this is adopted, all government-owned vessels when engaged in trade will be treated as privately owned merchantmen.

The experts defined as unjust on legal grounds the present immunity of government-owned vessels from the national laws of the countries at whose ports they touch. It recommended that such craft be made liable the same as other vessels under the Brussels convention of 1926.

The experts side-stepped action on one of the most interesting questions proposed at any recent Pan-American conference—that of denying citizenship to certain persons born within a country. Peru has a large Oriental population, mostly Chinese and Japanese, who are not easily assimilable. The experts' proposal did not mention them specifically, but it provided that a country might deny citizenship to any group which, for economic or racial reasons, was not likely to be absorbed easily into the national life.

Parents' Nationality Urged

A proposal before the experts would make the children of such alien residents citizens of the country of their parents. This is radically opposed to the principle of jus solis, by which all Latin-American countries now claim as citizens all persons born on their soil, regardless of the nationality of their parents.

Because the project is of a highly controversial nature, in the absolute impossibility of getting full agreement, the committee of experts submitted a questionnaire to the various national committees on codification, asking for their opinion. In voting in favor of this procedure, one expert remarked that many other conferences could have been saved from failure if they had had some such outside committee to which to pass along responsibility.

The experts presented a draft convention coordinating the conciliation and arbitration treaties.

They sidestepped action on the controversial question of an international court of American justice. This was one of the most important problems passed on to them by the Buenos Aires Conference for the Maintenance of Peace. They held the court offered a political

parties agree not to intervene diplomatically in support of claims arising out of contract, unless there has been a denial of justice or a infraction of a generally recognized international duty.

"Thirdly, in the event of unjustified repudiation or breach of the terms of a contract (mala fides) and failure to settle the claim by resort to local remedies and diplomatic negotiations, either creditor or debtor may demand and obtain arbitration of the issue of unjustified repudiation or violation (mala fides), denial of justice or infraction of a generally recognized international duty."

Enlarge Drago Doctrine

A resolution of the Buenos Aires conference charged the committee of experts with the formulation of principles with respect to the elimination of force and of diplomatic intervention in the cases of pecuniary claims and other private actions. The experts have enlarged the well-known Drago doctrine, which forebade the use of force for the collection of public loans.

This doctrine made no distinction between good faith and bad faith, but merely sought to prevent the use of armed force for the collection of public debt, as was assumed to be the case in Venezuela in 1902. Its sponsor did not oppose other forms of settlement of debt, nor was he defending bad faith in the non-payment of debt.

The experts now recommend that in the matter of public loans or public debts arbitration should be limited strictly to allegations and prima facie evidence of bad faith, such as international withdrawal of guaranteed security, intentional disregard of priorities, preferences and other essential terms or willful repudiation of debt. The report says

CUBA, AT LIMA, ASKS WAR ON ALIEN AIMS

Urges Parley to Take Steps to Combat Dictators' Ideas and Preserve Democracy

TIES WITH U. S. PRAISED

Main Committee Hears Attack on Nazis—Ready to Take Up Plan for American League

By JOHN W. WHITE
Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 13.—With preliminary ceremonies and organization routine out of the way, the Eighth International Conference of American States finally got down to work this morning. Its interest was keenly centered on the committee studying the organization of peace.

Although there is a great volume of important work before the conference on a wide range of subjects, it is certain that the main interest will focus on this committee throughout. The reason is that at its sessions the delegates will air their views on the question of continental defense and prepare for action at a plenary session whatever project is eventually chosen to embody the attitude of the conference toward totalitarian states.

The committee met this morning under the presidency of Dr. Afranio de Mello Franco, Brazil's elder statesman and one of the most universally admired and respected men in South America. One of the largest committees functioning at the conference, it met in the Chamber of Deputies, where the plenary session are also held.

Many "Observers" Attend

Today's session was attended by a large gallery, including many unofficial "observers," who are reporting to foreign governments and to various political and trade associations in the United States and Europe on this committee's work. Dr. de Mello Franco directed the committee's debate in that rich Portuguese that has made him one

veloped into a bitter attack on Germany and he declared that the Americas could not possibly have anything in common with a nation that had returned to customs of the Middle Ages.

Dr. de Mello Franco declared the session terminated when M. Bellegrade sat down. There was a rush of delegates to congratulate him, many embracing him and patting him on the back. This served to show that the delegates were definitely lined up against Germany regardless of all the hopes of Secretary of State Cordell Hull of the United States that it might be possible to avoid such a stand.

Ninty-four projects, reports and proposals covering the conference's twenty-three-point agenda already have been presented. Several delegations still have projects to present. The delegates will have to work intensely every day if they are to get this large volume of business disposed of before the date set for closing the conference.

There are six projects for establishment of an American Court of International Justice, all carried over from previous conferences. Proposals for an American League of Nations have been boiled down to the joint project sponsored by Columbia and the Dominican Republic at the Buenos Aires Conference for the Maintenance of Peace two years.

Aim at Reich Persecution

Bolivia and Cuba have proposed resolutions condemning racial discrimination. Both are clearly designed as condemnations of Germany's persecution of the Jews.

Venezuela has presented three broad and carefully studied projects for strengthening already existing peace machinery. One proposes procedure for conciliation, another suggests methods of arbitration and the third project is for continental security.

The security project includes the highly controversial topic of definition of an aggressor and conflicts with the recommendation of the committee of experts on codification of international law, which has suggested that conference refrain from trying to make such a definition. The Venezuelan plan provides for negotiation of complementary agreements on organization of mutual defense and cooperation in the event of aggression.

The Committee on the Organization of Peace was the only one that actually started its work today. The other committees devoted their sessions to organizing and preparing future procedure.

Cuba Urges World Parley To Spread Lima Lessons

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 13.—Cuba has proposed calling a world economic conference in an attempt to find solutions for world problems by extension to them of the remedies worked out at the Pan-American conference here.

Their project explains that the present economic crisis is world-wide, not regional, and argues that it will be difficult for the American countries to work out any solutions for their problems unless such solutions can be dovetailed into a world solution. It proposes that the world conference be called under the auspices of the Pan American Union.

THIS PAGE IS DECLASSIFIED IAW EO 13526

American States finally got down to work this morning. Its interest was keenly centered on the committee studying the organization of peace.

Although there is a great volume of important work before the conference on a wide range of subjects, it is certain that the main interest will focus on this committee throughout. The reason is that at its sessions the delegates will air their views on the question of continental defense and prepare for action at a plenary session whatever project is eventually chosen to embody the attitude of the conference toward totalitarian states.

The committee met this morning under the presidency of Dr. Afranio de Mello Franco, Brazil's elder statesman and one of the most universally admired and respected men in South America. One of the largest committees functioning at the conference, it met in the Chamber of Deputies, where the plenary session are also held.

Many "Observers" Attend

Today's session was attended by a large gallery, including many unofficial "observers," who are reporting to foreign governments and to various political and trade associations in the United States and Europe on this committee's work. Dr. de Mello Franco directed the committee's debate in that rich Portuguese that has made him one of South America's most popular orators.

The debate was carried on in Spanish, Portuguese and French. Dr. de Mello Franco managed to keep the debate within bounds at this session, but there was ample evidence of pent-up emotions that are likely to burst out at the first opportunity.

There was general opposition to the appointment of any subcommittees, members expressing the opinion that the subjects before the committee were of such vital importance that every one wanted to be at the debates on all of them.

Luis Lopez de Mesa, Columbia's Foreign Minister and chairman of her delegation here, requested Dr. de Mello Franco to permit the Colombian-Dominican joint project for an American League of Nations to come up first in the debate. He said he must return home and did not want to go before speaking on this project.

Pedro Manini Rios, chairman of the Uruguayan delegation, opposed this, saying that several nations including Uruguay were opposed to the proposed league and that early discussion on it would divide the committee. He proposed that less controversial projects be disposed of first.

Victor Andres Belaunde of Peru proposed that the Colombian Foreign Minister be permitted to speak on his project at an early opportunity in the debate and that discussion then be continued at some more convenient time. This proposal was adopted.

Cuban Policy Expounded

Secretary of State Juan J. Remos of Cuba read a declaration of the Cuban delegation's policy.

This is no time for timidity, he said, but rather for valiant declarations regarding the defense of the continent. He declared that the danger was not so much one of armed invasion as of the infiltration of subversive propaganda undermining democratic institutions.

The Americas must take definite steps to preserve their democracy, their institutions and their tradition of liberty, the Cuban delegate went on, or the present significance of the word "America" must disappear in a deluge of totalitarian ideology. He declared that there was urgent need of a unanimous declaration of solidarity in the protection of American doctrines and said the Cuban delegation was proud to take this opportunity of expressing its recognition of gratitude for the real friendship of the United States.

Dr. Remos said his delegation was ready to cooperate in whatever measures were necessary to maintain the physical and spiritual union of the continent and fight all propaganda contrary to democratic institutions.

Haitian Denounces Reich

Dantes Bellegarde of Haiti, speaking extemporaneously in French, delivered a stirring speech such as the many that have made him famous at League of Nations sessions at Geneva. His remarks soon desession terminated when M. Bellegrade sat down. There was a rush of delegates to congratulate him, many embracing him and patting him on the back. This served to show that the delegates were definitely lined up against Germany regardless of all the hopes of Secretary of State Cordell Hull of the United States that it might be possible to avoid such a stand.

Ninty-four projects, reports and proposals covering the conference's twenty-three-point agenda already have been presented. Several delegations still have projects to present. OBJECTORS AT LIMA REVEAL U. S. PLAN ON AMERICAN UNITY

Obligation to Defend Any of the 21 Republics Offers Chief Stumbling Block

CONSULTING BODY SET UP

Argentina Rejects Designation of Foreign Ministers to Map Out United Action

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 15.—It was learned today that the continuing controversy over the attitude of the Eighth Pan-American Conference on continental solidarity springs from the United States' proposal for an additional protocol to the consultative pact signed at the Buenos Aires [Argentina] conference for the maintenance of peace two years ago. The opposition arises from the fact that the United States' protocol would bind all republics to unite against external aggression under all circumstances.

Secretary of State Cordell Hull and other United States delegates have persisted in the closest secrecy regarding their proposal. They have even insisted that it did not go farther than a suggestion on which to base consultations among all delegations. Certain Latin-American delegations consulted on the subject, however, have copies of the draft for the proposed protocol, received from Secretary Hull upon his first visit to them. The controversy arises from Argentina's flat rejection of Mr. Hull's project.

Set Up Consultative Group

The proposed protocol is designed to set up machinery for operation of Article I of the Convention for the Maintenance, Preservation and Reestablishment of Peace signed at Buenos Aires on Dec. 23, 1936,

The opposition arises from the fact that the United States' protocol would bind all republics to unite against external aggression under all circumstances.

Secretary of State Cordell Hull and other United States delegates have persisted in the closest secrecy regarding their proposal. They have even insisted that it did not go farther than a suggestion on which to base consultations among all delegations. Certain Latin-American delegations consulted on the subject, however, have copies of the draft for the proposed protocol, received from Secretary Hull upon his first visit to them. The controversy arises from Argentina's flat rejection of Mr. Hull's project.

Set Up Consultative Group

The proposed protocol is designed to set up machinery for operation of Article I of the Convention for the Maintenance, Preservation and Reestablishment of Peace signed at Buenos Aires on Dec. 23, 1936, usually referred to as the Buenos Aires consultative pact. Article 1 reads:

"In the event that the peace of the American republics is menaced, and in order to coordinate efforts to prevent war, any of governments of American republics signatory to the Treaty of Paris of 1928 or to the Treaty of Non-Aggression and Conciliation of 1933 or to both, whether or not a member of other peace organizations, shall consult with other governments of American republics, which in such event shall consult together for the purpose of finding and adopting methods of peaceful cooperation."

Since this treaty did not provide how the governments were to consult and cooperate in case of a threat against their peace, Article 1 on this conference's agenda called for projects to perfect and coordinate interamerican peace instruments.

Secretary Hull's proposal for an additional protocol provides for a permanent consultative body composed of the Foreign Ministers of all the American republics, but it does not provide where or how they shall meet. This detail was to have been worked out at consultations with other delegations.

The United State's draft protocol also establishes the principle of strict solidarity and equal responsibility among all the American republics to participate in the defense of any one of them that may be threatened.

Argentina has rejected both provisions of the United States project. She insists on reserving freedom of action at all times and will not be bound before hand by treaty to participate in some conflict that has not yet arisen and details of which cannot be known now.

She also rejected the idea that the Foreign Ministers form a permanent consultative board. Argentina argues that such a set-up would run up against constitutional difficulties in several countries where Foreign Ministers could not leave their countries without the permission of Congress, which might be in recess when a crisis arose.

The Chilean delegation has attempted to work out a compromise measure to meet the conflicting viewpoints of Argentina and the United States.

Chile proposed that the consultative body be composed of American diplomatic representative at some Latin-American capital to be selected by each Pan-American conference for the ensuing five years. The capital selected as the seat of the consultative board was to be different from the one at which the next Pan-American conference is to meet. The capital that would be the center of the consultations would be chosen by a majority vote.

Argentina rejected the Chilean proposal this morning, objecting particular to the choice of the seat of consultation by majority vote. This action added to the rapidly increasing atmosphere of pessimism already hanging over the conference.

Some delegates were so depressed tonight that they were predicting this conference would be unable to make any progress toward peace beyond what had already been accomplished at the Buenos Aires conference, which is unanimously admitted to be unfinished and unsatisfactory because it does not set up machinery to make consultative measures workable.

Several delegations fretting under restraint were eagerly waiting for some session at which they plan to air their views on the present stalemate on continental defense, which they consider the conference's most important task. It was given out at the conference headquarters today that Commission 1, in which these views could be aired, would not meet again until further notice. Meanwhile the conference activities were confined to three or four meetings of subcommittees.

Every day there is a general impression that little is being accomplished, despite the agreement to close the conference Dec. 27.

Debate on Diplomatic Aid Ban Is Avoided by Giving Experts Issue for Report in 1943

U. S. PUSHES PEACE PLAN

Delegates Circulate a Draft Providing That Ministers Consult Every 2 Years

12/19/38

Efforts of Chile, Mexico and Argentina to have the Pan-American Conference agree that no diplomatic intervention should follow seizure of property of foreigners were defeated at Lima yesterday. It was decided to refer the question to experts for a report to the next conference five years hence. [Page 1.]

The United States delegation **circulated a draft of "The Declaration of Lima" designed to set** up machinery for consultation for the maintenance of peace in the Western Hemisphere. It provided for a meeting of Ministers of all American nations every two years. [Page 47.]

Although Foreign Minister Aranha of Brazil denied negotiations for a new barter agreement with Germany were going on, it appeared likely that the Brazilians would eventually have to sign a treaty on the Reich's terms. [Page 43.]

Expropriation Issue Put Off

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru., Dec. 17.—The Eighth Pan-American Conference today decided to sidestep debate on the highly controversial question of whether foreign investors are entitled to diplomatic assistance when their investments are confiscated or expropriated by Latin-American governments.

The second subcommittee of Committee Number Two, which is studying all the conference's projects on pecuniary claims, voted this morning to refer the subject back to the committee of experts on international law for further study and report to the Ninth Pan-American Conference five years hence.

Smaller Nations Say Failure to Take Leadership Made Conference Impotent

DEMAND END OF 'GAG' RULE

Cubans and Mexicans Resent Curb on Free Discussion of All Agenda Topics

12/21/38

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 20.—There seems to be every indication that the United States will come out of the eighth Pan American Conference witht less prestige than at any time in the last ten years. With only three more working days, it is difficult to see how the situation can be saved before adjournment.

Although this is one of the regularly scheduled Pan American Conferences held every five years, the world is looking at it as the first skirmish in this hemisphere between democracy and totalitarian ideology. President Roosevelt gave this conference its keynote of continental defense of democratic institutions against the threat of totalitarian infiltration.

Most Latin-American delegations came to Lima prepared to follow the lead of the United States. But the United States delegation has sidestepped leadership.

Totalitarians Make Issue

The totalitarian states made an issue of this conference and put democracy on the defensive. With

THIS PAGE IS DECLASSIFIED IAW EO 13526

This action checks the efforts of several Latin-American countries to get a ruling through this conference denying diplomatic protection to foreign investors, but in the opinion of several leading authorities on international law now here it leaves the way open for certain Latin republics to "gang up" against the United States and present a united front, making this question one of politics rather than law.

Treaty Agreements Sought

Several of the Latin-American republics had come to the Lima conference determined to try to push through certain measures designed to make the good-neighbor policy a matter of international law rather than a mere declaration by President Roosevelt.

They sought to do this by getting the conference to adopt treaty agreements denying any American country the right to use force or diplomatic intervention to protect the investments of its citizens.

Chile took the leadership of this fight against the protection of foreign investors during the deliberations of the committee of experts. Chile and Mexico supported it in meetings of the subcommittee.

Argentina supported the movement by presenting a draft convention by which the American republics would pledge themselves without reservation of any kind not to use armed force or diplomatic intervention either for collecting public or contractual debts or for supporting pecuniary claims of their nationals.

In addition to the Argentine convention, the subcommittee also had before it a draft convention prepared b ythe committee or experts denying the right of countries to use force or diplomatic pressure except in cases where justice had been denied to investors. The question whether justice had been denied was to have been decided by arbitration.

Mexican Proposal Offered

A third project before the subcommittee was a Mexican proposal by which the American countries would recognize the right of foreigners to waive diplomatic protection.

The Mexican project would have meant recognition as international law of the declaration that has become known to international lawyers as the "Calvo Doctrine.

This doctrine has always been opposed by the United States State Department, which contends that

the matter of diplomatic intervention is a right pertaining to the State and not to its citizens and that they therefore cannot sign away the right of their country to use its diplomatic machinery when it considers it desirable to use it.

Mexico and some other Latin-American republics have often included a clause in their contracts requiring the contractors to waive the right of diplomatic protection.

democracy on the defense against an open defensive from totalitarian agents, the United States has not only refused to assume leadership but has refused to permit any one else to assume it.

With no leadership on its keynote problem, the conference has accomplished nothing in the direction of a solidarity declaration. Nor has it accomplished anything else of importance.

Because of its failure to assume leadership, the United States has definitely lost prestige among Central and South American countries, which looked to the United States delegation to chart a course that the dmocratic countries should follow.

Some of the smaller countries feel very strongly that they have been abandoned. Many of their delegates are emphatically outspoken in describing the United States' attitude as timid in a situation that the United States itself has described as serious. One prominent delegate of a country that has hitherto felt itself very close to the United States said today:

"We are going home to restudy our whole position as regards future Pan-American fenferences. If this is an example of what they are to be, they are a waste of time and not worth the expense of sending delegations to them."

It is becoming more and more certain that if any declaration is made on American solidarity, it will be so weak as not to offend the most sensitive of the dictators.

Cubans Resent "Betrayal"

The Cubans are bitter at what they describe as their betrayal by the United States on the question of racial and religious persecution. They presented a resolution condemning persecutions of the kind that Germany has been conducting against Jews and against the churches. They insist they had a promise of the United States' support. But when their resolution came up in committee the United Staes' and other delegates permitted it to be sidetracked.

The Mexcian and Cuban delegations sounded a strong noe of revolt at this morning's session of the committee on Civil and Political Rights of Women. Señora Esperanza Balmaceda of Mexico attacking an attempt to gag the debate on women's rights, exclaimed:

"Mexico wants some dynamic results out of this conference, not merely static results! We insist on our ight to study, discuss and debate all problems before this conference—not only the question now be-

The question whether justice had been denied was to have been decided by arbitration.

Mexican Proposal Offered

A third project before the subcommittee was a Mexican proposal by which the American countries would recognize the right of foreigners to waive diplomatic protection.

The Mexican project would have meant recognition as international law of the declaration that has become known to international lawyers as the "Calvo Doctrine.

This doctrine has always been opposed by the United States State Department, which contends that the matter of diplomatic intervention is a right pertaining to the State and not to its citizens and that they therefore cannot sign away the right of their country to use its diplomatic machinery when it considers it desirable to use it.

Mexico and some other Latin-American republics have often included a clause in their contracts requiring the contractors to waive the right of diplomatic protection, but the State Department, as soon as it has learned of the signature of such contracts, has made formal representations refusing to recognize the waiver clause.

The subcommittee that studied the question of pecuniary claims was composed of Juan Antonio Buero, former Uruguayan Foreign Minister; Alberto Ulloa Sotomayor of Peru, Alberto Cruchaga Ossa, legal counselor to the Chilean Foreign Minister; Manuel J. Sierra, Professor of International Law at the University of Mexico, and Green H. Hackworth, legal adviser to the United States State Department.

The subcommittee's deliberations produced an interesting situation that had not arisen at any previous conference. Señor Cruchaga was Chile's member on the committee of experts and he led a long and bitter fight for the contention that foreigners must be treated exactly as nationals and should not be permitted to have any recourse not also available to nationals. He was voted down by all the other members of the committee of experts every time he tried to sustain this thesis.

Then, as a delegate, he appeared in the subcommittee fighting in favor of the thesis that had been voted down in the committee of experts, which they had ruled should not come before the conference. He finally succeeded in nullifying the entire report of the committee of experts by getting the subcommittee to adopt an amendment stating, "provided that in all cases aliens shall not be treated differently from nationals."

The debate in the subcommittee showed clearly the impossibility of getting agreement on the question. Rather than let it come before the conference in controversial form, the subcommittee voted to postpone all three projects until the next conference.

It drafted for adoption at the next plenary session a recommendation that these projects be referred to the several national committees on the codification of international law and also to the permanent committee of experts at Rio de Janeiro.

BETRAYAL BY U. S. IS CHARGED AT LIMA

Smaller Nations Say Failure to Take Leadership Made Conference Impotent

DEMAND END OF 'GAG' RULE

Cubans and Mexicans Resent Curb on Free Discussion of All Agenda Topics

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 20.—There seems to be every indication that the United States will come out of the eighth Pan American Conference witht less prestige than at any time in the last ten years. With only three more working days, it is difficult to see how the situation can be saved before adjournment.

Although this is one of the regularly scheduled Pan American Conferences held every five years, the world is looking at it as the first skirmish in this hemisphere between democracy and totalitarian ideology. President Roosevelt gave this conference its keynote of continental defense of democratic institutions against the threat of totalitarian infiltration.

Most Latin-American delegations came to Lima prepared to follow the lead of the United States. But the United States delegation has sidestepped leadership.

Totalitarians Make Issue

The totalitarian states made an issue of this conference and put democracy on the defensive. With

fore this committee, but all other matters on the agenda.

A spokesman for the Cuban delegation also demanded open discussion of all problems. He said the delegates had come to Lima to study inter-American problems openly, not have prearranged actions forced down their throats.

Argentina Not Blamed

Most of the delegations realize that Argentina's opposition to a strong solidarity declaration was dictated by powerful economic reasons that bind her to Europe more closely than most other South American countries. They do not blame her for assuming an attitude thate fits her own peculiar situation. But they resent the fact that the United Staets has let Argentina force her policy upon all the other countries, most of which have not such strong European connections.

These nations wanted to take a stand in defense of their own positions rather than join Argentina. Secretary of State Cordell Hull insists, however, that there must be no serious differences between any groups of American nations at this time. He thinks it is better to stand together on almost any declaration, however weak, than to try to force action on a stronger one that would set up separate groups of American countries.

Mr. Hull is probably correct in this view. Certainly it does not behoove North Americans to criticise the Argentines for doing almost exactly what the United States has done on world affairs.

But the safest prediction regarding this conference is taht totalitarian leaders will loudly and universally advertise it as a failure.

Nicaraguans Get Holiday Bonus

Special Cable to THE NEW YORK TIMES.

MANAGUA, Nicaragua, Dec. 20. — President Anastasio Somoza played Santa Claus today, giving a holiday bonus of 10 per cent of their annual salaries and ten days vacation to all government employes. Congress recessed until the new year.

ARGENTINA AGREES TO ACCEPT ACCORD

Brazil, However, Puts Off Full Agreement on Continental Solidarity at Lima

PACT SIMILAR TO HULL'S

Cantilo of Buenos Aires Sent Revised Text With a Strong Declaration on Unity

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 23.—Argentina this afternoon signed the eighth Pan-American Conference's Declaration of Lima on the solidarity of the Americas. Only the signature of Brazil was lacking at a late hour to make the consent unanimous.

Brazil was holding out on the question of diplomatic courtesy until President Getulio Vargas withdrew from the conference the compromise draft presented late last night as the result of a telephonic conference of the Presidents of Argentina, Brazil and Uruguay.

It is expected, therefore, that Brazil will sign sometime tonight. The conference then will have achieved its major objective, getting a unanimous declaration on solidarity which is designed to serve as a notice to the totalitarian States that the American countries are ready to stand united for common defense against any foreign intervention.

Drafted by Argentine Minister

The declaration signed today was drafted by Dr. Jose Maria Contilo, Foreign Minister of Argentina, aboard the cruiser Almirante Brown after he left here and was formally presented to the other twenty delegations last Saturday.

Although drafted by Dr. Cantilo, the text follows much closer Secretary of State Cordell Hull's original draft for the Declaration of Lima than it does the text of the first project which Argentina presented to the conference. It contains Mr. Hull's text for a strong declaration of solidarity, which was not in the original Argentine draft.

It provides that the Foreign Ministers will meet for consultation whenever a crisis arises and upon the call of any American country. The meetings are to be held in various Americans capitals in rotation.

The conference in plenary session today formally approved twenty-three resolutions and recommendations on economic subjects most of which were of a routine nature.

One resolution recommended that ministers of finance of American countries meet at least once a year to study inter-American financial and economic problems and suggested the first meeting be in Guatemala June 1, next year.

Colombias draft of the treaty liberalizing inter-American commerce and providing for economic non-aggression, Argentina's project regulating inter-American parcels post service and Brazils draft treaty for regulating immigration were referred to the Pan-American union for study and a report to the next conference.

Cuba's proposal for calling a world economic conference also was referred to the union for study and a report on its feasibility. Cuba had recommended the conference on the ground that present economic difficulties are world wide and it is useless to try to solve them regionally unless regional solutions can be dovetailed into a world program.

Several resolutions were passed urging the governments of the American countries to ratify resolutions taken in previous conferences designed to remove restrictions on trade and to make port procedures and traveling facilities easier.

Argentines at First Suspicious

LIMA, Peru, Dec. 23 (AP).—The Pan-American Conference debated tonight a brand new version of what it should say about continental solidarity and an Argentine proposal which most of the twenty-one republics had approved.

The new proposal was the outcome of telephonic negotiations among the Presidents of Argentina pand Uruguay and the Foreign Minister of Brazil.

The Argentine delegates, however, withheld agreement to it—despite their own President's approval—in a belief that Brazil had "put something over on Argentina."

The Argentines, insisting on their own counter-proposal, which had amended the plan for a strong declaration on continental defense brought to Lima by United States Secretary of State Hull, said the "plan of the three Presidents" went beyond Argentine policy.

Presidents Roberto Ortiz of Argentina and Alfredo Baldomir of Uruguay and the Brazilian Foreign Minister, Oswaldo Aranha, speaking for President Getulio Vargas, conferred by telephone from their capitals, Buenos Aires, Montevideo and Rio de Janeiro, in formulating the "plan of the three Presidents."

In a belief that Señor Aranha, former Brazilian Ambassador to Washington, had "put something over" on President Ortiz, leaders of the Argentine delegation made excited telephone calls to Buenos Aires, seeking to have their government reconsider.

The new Argentine-Brazilian-Uruguayan proposal was reported stronger than the separate Argentine, or majority, proposal in that it referred to mutual assistance in case of aggression. The majority proposal did not go beyond consultation.

Mr. Hull was said to oppose the new proposal on the ground that it further confused an already confused conference. The confusion was reflected by a flood of telephone calls and telegrams from capital to capital and a series of impromptu conferences through the day.

Urgency and confusion were accented by the fact that the last plenary business session of the conference comes at 4 P. M. tomorrow. The conference will clase on Tuesday.

THIS PAGE IS DECLASSIFIED IAW EO 13526

LIMA DECLARATION A DEMOCRATIC FEAT

Expression of the Solidarity of Americas Conciliates 21 Conflicting Viewpoints

GREAT ACHIEVEMENT SEEN

Argentines Have Gone Much More Than Half Way on Road to Compromise

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 24.—The declaration of American solidarity that was finally signed today at the Pan-American Conference is a compromise draft drawn up to conciliate twenty-one conflicting viewpoints.

It does not go as far as the United States had hoped, nor nearly as far as several other countries, including Brazil, wanted to go. But it does go much further than Argentina originally wanted to go.

It is a declaration of international solidarity of purpose such as probably could not be drafted for any other group of nations on earth. It is a clear, strong warning to the totalitarian States that the American republics are determined to stand united if necessary in defense of their republican institutions.

The declaration was arrived at by the democratic process in open discussion in open convention. It may go down in history as the greatest international achievement of the democratic process up to date.

Totalitarians See Disunity

The democratic process is something that totalitarian Europeans cannot understand nor appreciate. It necessarily gives much publicity to the differences of opinion that arise in the process because there is no secret intriguing.

The negotiations attending the perfecting of the Declaration of Lima have been attended by much publicity, some of it not favorable. Therefore, the totalitarian authorities have already seized upon this difference of opinion and are already advertising to the world that the American countries are not united and that the United States did not achieve what it came to Lima to achieve.

A German broadcast to South America in Spanish last night viciously attacked the Pan American Conference as a failure because of the difference of opinion existing among the delegations on the question of solidarity. What the Germans and other Europeans cannot and will not see is that the difference of opinion was merely one of editing.

American nations were agreed from the beginning of the conference to declare their solidarity in defense of democratic institutions. The only conflict was how they should express their solidarity and how far they should go toward binding themselves to some spe-

equal sovereignty of States and of individual liberty without religious or racial prejudices.

On the basis of these principles they seek and defend the peace of the continent. They also state as an American principle that the essence of the international order sustained by continental solidarity is respect for the personality, sover-

ties have already seized upon this difference of opinion and are already advertising to the world that the American countries are not united and that the United States did not achieve what it came to Lima to achieve.

A German broadcast to South America in Spanish last night viciously attacked the Pan American Conference as a failure because of the difference of opinion existing among the delegations on the question of solidarity. What the Germans and other Europeans cannot and will not see is that the difference of opinion was merely one of editing.

American nations were agreed from the beginning of the conference to declare their solidarity in defense of democratic institutions. The only conflict was how they should express their solidarity and how far they should go toward binding themselves to some specific action to meet circumstances that have not yet arisen and that may in fact never arise.

Lasting Achievement Seen

Whatever differences of opinion have arisen at this conference will soon be forgotten. But the declaration of Lima will always stand as something done, something that can always be pointed to as the united attitude of the American democracies in a world in which most other nations are suspiciously watching each other, fearful of hidden motives.

As Secretary of State Cordell Hull pointed out this afternoon in an address, the intimate exchange of views that attended the drafting of the Declaration of Lima has made it possible for all the American nations to know each other's hearts and minds, resulting in the common formulation of a common policy by the Americas.

The declaration of solidarity signed today follows very closely the phrasing of the original Declaration of Lima drafted by Mr. Hull after the Argentines had refused even to discuss the American proposal for a convention that they felt could be interpreted as a military and political alliance.

Comparison of Argentina's first draft proposal with today's declaration shows that the Argentines came much more than half way on the road to the compromise draft.

The first proposal of the Argentine Government, cabled to Secretary Hull aboard the liner Santa Clara by the United States Embassy in Buenos Aires, contemplated no declaration on solidarity and merely provided for meetings of the American Ministers of Foreign Affairs whenever they deemed it advisable.

One of the purposes of such meetings as stated in the preamble was to establish more effective contact in the event situations should arise beyond the scope contemplated in the convention signed at Buenos Aires two years ago for the maintenance, preservation and reestablishment of peace, but it did not specify the purposes for which meetings might be called.

Following this recitation of principles, the American governments reaffirm this continental solidarity and their purpose to collaborate in the maintenance of the principles upon which it is based. They reaffirm this decision to defend these principles against all foreign intervention or activity of a threatening character.

They proclaim their common concern and their determination to make effective their solidarity in the event that the peace, security or territorial integrity of any American republic is threatened by acts of any nature calculated to impair them. Their purposes in these regards are to be coordinated by means of the procedure of consultation, using measures which the circumstances of each case may make advisable.

The Final Declaration

The declaration finally signed is much broader in scope and states with precision the aims and purposes of the republics in signing it.

The preamble recites that the peoples of the Americas have achieved spiritual unity through the similarity of their republican institutions, their unshakable will for peace and their profound sentiment of humanity and tolerance, and through their adherence to the principles of international law, of the equal sovereignty of States and of individual liberty without religious or racial prejudices.

On the basis of these principles they seek and defend the peace of the continent. They also state as an American principle that the essence of the international order sustained by continental solidarity is respect for the personality, sovereignty and independence of each American State.

Juridical equality as sovereign States and the right of each republic to act independently, in its individual capacity are recognized and expressed as part of the understanding.

The declaration provides that the consultations contemplated by this and other peace instruments shall be through the ministers of foreign affairs and shall take place in the several capitals by rotation when deemed advisable and at the initiative of any one of them.

The Declaration of Lima thus sets up machinery for carrying out the purposes of the conventions signed at the Buenos Aires Peace Conference.

HULL'S PEACE PLAN DOMINATES IN LIMA

Program Based on Greater Freedom of Trade Embodied in Pan-American Moves

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 26.—The program of Cordell Hull, United States Secretary of State, for restoring world peace will be formally adopted as a policy of the American hemisphere here tomorrow morning when the delegations of the twenty-one American nations solemnly sign the declarations, resolutions and other acts approved at the Eighth Pan-American Conference.

Mr. Hull expects this to be his last such conference, and he will return home with a sense of great satisfaction at having achieved the three main objectives for which he came to Lima. But his greatest satisfaction undoubtedly is that his well-known eight-point peace program is now to be known to the world as "The Declaration of American Principles," which is distinct from "The Declaration of Lima."

When he arrived in Lima he told newspaper men that he felt the countries of this hemisphere must set an example to Europe. He now feels that that example has been set here. As is well known, the Secretary of State has always argued that it is impossible to have one code for one part of the world but not for another.

Offers Code of Peace

So as he leaves this Pan-American Conference he feels that he has left a code of peace that eventually must spread over the entire world. He insists, in fact, that peace cannot be achieved anywhere except by the recognition of all eight points in the new code.

Mr. Hull's three outstanding objectives for the Pan-American Conference were that the American States should reaffirm the trade and political principles enunciated at the Montevideo and Buenos Aires conferences. Then they must go as far as possible beyond the Buenos Aires peace conventions in declaring their solidarity. All three of those objectives have been accomplished.

The instrument that has been named "The Declaration of Lima" is undoubtedly the most important of all. The more the delegates read

THIS PAGE IS DECLASSIFIED IAW EO 13526

set an example to Europe. He now feels that that example has been set here. As is well known, the Secretary of State has always argued that it is impossible to have one code for one part of the world but not for another.

Offers Code of Peace

So as he leaves this Pan-American Conference he feels that he has left a code of peace that eventually must spread over the entire world. He insists, in fact, that peace cannot be achieved anywhere except by the recognition of all eight points in the new code.

Mr. Hull's three outstanding objectives for the Pan-American Conference were that the American States should reaffirm the trade and political principles enunciated at the Montevideo and Buenos Aires conferences. Then they must go as far as possible beyond the Buenos Aires peace conventions in declaring their solidarity. All three of those objectives have been accomplished.

The instrument that has been named "The Declaration of Lima" is undoubtedly the most important of all. The more the delegates read it the more they like it. This is especially true of the United States delegates. Study and consideration of this declaration over the week-end holidays has convinced the delegates that it is a much better declaration than some of them thought at first.

It is a declaration of intents and purposes that leaves no room for doubt that the American countries stand solidly together. It is so phrased that almost anything can be read into it if an emergency arises. It has the advantage over a treaty or convention that it does not require ratification by congresses.

All the American governments have spoken through delegates who have ambassadorial authority to act and speak in the name of their countries. The courts in interpreting laws usually look for intent on the part of the legislative bodies that frame them. There never can be any doubt about the intent of the Declaration of Lima.

Intent Demonstrated

Its intent was demonstrated when all the delegations rose to their feet and cheered it. The determination behind it was clearly oulined in speeches made by the leading delegates setting forth why their countries signed it.

Furthermore, it should not be forgotten that the Declaration of Lima was the subject of several secret conferences by the steering committee, composed of the chairmen of the twenty-one delegations. This committee included ten Ministers of Foreign Affairs. Each of them is returning home with a clear understanding of what his colleagues are prepared to do regarding the declaration.

Diplomats of long experience say the declaration will be important, whatever it is interpreted to be. Dr. Afranio de Mello Franco informed the plenary session that Brazil interprets it as a collective security pact. It has already been reported in Europe as just that.

If there was any doubt in the mind of any one as to what the American countries really meant by the declaration that doubt must have been dispelled when at the same plenary session the conference approved by acclamation Mr. Hull's eight-point declaration of principles.

This second declaration was put before the conference in the form of a resolution presented by Dr. de Mello Franco, but every one knew it was Mr. Hull's now famous program for peace. This is the only formal program for peace now being actively pushed anywhere in the world. It is based on the so-called eight pillars of peace set up by the Buenos Aires peace conference two years ago.

It was first enunciated by Mr. Hull at a press conference July 16, 1937, just after Japan had gone into China, again aggravating a world

situation already upset by European conditions.

For Sound Economic Base

This program embraces Mr. Hull's persistently preached theory that any political program designed to restore and maintain peace in the world must be based on sound economic principles. These principles were adopted by the conference when it adopted the United States delegation's resolution favoring the reduction of barriers to international trade.

The American countries have now declared themselves unanimously in favor of Mr. Hull's economic policy. This policy would enable each country to produce what it can produce best and then enable it to find world markets for those things without artificial barriers or other restrictions. This would provide the selling countries with bills of exchange with which they could buy what they do not produce.

Mr. Hull has argued here, as he does at Washington, that the greater the volume of world trade the better off the world will be. When this volume is unrestrained by artificial measures each country gets its fair share of world trade and everybody is the richer and happier. He has argued that all trade restrictions tend to reduce the volume of world trade to lower levels.

About a month after Mr. Hull announced his eight principles he sent a circular to all governments asking if they agreed with those principles. Every one, including Japan and Germany, replied affirmatively, Japan making a reservation only in case of China. Now the twenty-one American nations have formally adopted those principles as part of their international policy.

Mr. Hull's three objectives and 107 other instruments are being signed by the delegates today and tomorrow. They were notified today that formal drafts of all instruments were ready for signing at the conference headquarters after 9:30 A. M. Ceremonial closing of the session has been called for 6 P. M. tomorrow.

The American delegates and their large staff of secretarial and clerical assistants will board the steamship Santa Maria at the Callao docks tomorrow night and will sail for home Wednesday morning.

Mr. Hull will be the only speaker at the great state banquet that President Oscar Benavides of Peru is giving in honor of the delegates tomorrow night.

Alfred M. Landon, an American delegate, departed by plane this morning, in order to get home for New Year's. Mr. Hull gave out a statement expressing his appreciation of Mr. Landon's work as a delegate. Mr. Landon was one of the most popular of nearly 200 delegates who came to Lima, and wherever he went he was instantly surrounded by a large group of all nationalities.

Text of Declaration

"The Declaration of American Principles," referred to in the above dispatch, which has been adopted by the Pan-American Conference at Lima, was printed in late editions of THE NEW YORK TIMES Sunday. It reads as follows:

Whereas, the need for keeping alive the fundamental principles of relations among nations was never greater than today; and

Each State is interested in the preservation of world order under law, in peace with justice, and in the social and economic welfare of mankind.

The governments of the American republics resolve.

To proclaim, support and recommend, once again, the following principles, as essential to the achievement of the aforesaid objectives:

1. The intervention of any State in the internation… or external affairs of another is inadmissible;
2. All differences of International character should be settled by peaceful means;
3. The use of force as an instrument of national or international policy is proscribed;
4. Relations between States should be governed by the precepts of international law;
5. Respect for the faithful observance of treaties constitute the indispensable rule for the development of peaceful relations between States, and treaties can only be revised by agreement of the contracting parties;
6. Peaceful collaboration between representatives of the variout States and the development of intellectual interchange among their peoples is conducive to an understanding by each of the problems of the other, as well as problems common to all, and makes more readily possible the peaceful adjustment of international controversies;
7. Economic reconstruction contributes to national and international well-being, as well as to peace among nations, and
8. International cooperation is a necessary condition to the maintenance of the aforementioned principles.

Indian, 79, Must Support Wife

LONDON, Ont. (Canadian Press).—Eli Snake's 79 years do not excuse him from supporting his wife. Magistrate C. W. Hawshaw has ruled. Snake, charged with non-support of his wife, was ordered to pay $3 a week as long as they live apart. Both reside on Muncey Indian Reserve.

ARGENTINA OPPOSES ANY U. S. HEGEMONY

Traditional Policy Called to Public Attention on Eve of Conference at Lima

OUR PURPOSE MISTRUSTED

Munich Development, However, May Bring New Pressure for Pan-Americanism

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

BUENOS AIRES, Argentina, Dec. 5.—On that broad thoroughfare of swirling dust and yelling newsboys and honking, speeding, dangerously careening motor traffic, the Avenida de Mayo, center and focus and heart of the throbbing life of this metropolis of Latin America, the visitor from the United States, strolling along past leisurely coffee-sippers lounging at tables in front of cafes and past hurrying pedestrians who impolitely elbow him out of their path, halts suddenly, his eye caught by a big poster—pasted up between a passionate appeal on behalf of Loyalist Spain and a furious denunciation of Nazi Germany—with the following printed on it, in enormous letters:

"Down with Yankee imperialism! The United States has already stolen one-half the territory of Mexico! It has grabbed Panama from Colombia! It has assassinated Sandino, defender of Nicaraguan independence! It has enslaved our sister-republics of Central America and the Caribbean! It has fomented the Chaco war on behalf of American oil interests! He who forgets all this cannot claim to love liberty!"

This terrific outburst is signed "Alliance of Nationalist Youth." Across it somebody with far-different sentiments has affixed a placard reading, "Propaganda paid for with German money!"

No special importance need be attached to the presence just now of this anti-American poster on the Avenida de Mayo. But the fact remains that there it is. It serves to remind one that the Argentine Republic was long a hotbed of hostility to us. One must remember always that it is the native land of Manuel Ugarte, who, for a whole generation, shouted from the housetops ringing tirades against the "Colossus of the North," and of numerous others who never tired of painting Uncle Sam in dark and repellent colors.

Suspicion of our motives has never died here. Even the minimum of personal observation, even the most casual conversations with residents in this country, native and foreign, will suffice to make that clear.

When the Argentine delegation to the Pan-American Conference at Lima, now in session, left Buenos Aires a few days ago, emphasis was carefully laid on the fact that it would stick close to traditional Argentinian policy—a prominent ingredient of which, in the past, has been opposition to anything even remotely resembling North American hegemony over the American Continent. And Dr. Saavedra Lamas, who was Argentine Foreign Minister and played an important role in the two previous Pan-American Conferences, at Montevideo and in this city, chose the eve of the Lima meeting to publish a book reviewing the record of those conferences and laying stress on the fact that traditional Argentinian policy was maintained at them and should be maintained at Lima.

This attitude has been much modified by our recent conciliatory tactics toward Latin America. The Lima Conference, indeed, may prove that it is on the ebb for good.

But, as canny students of the situation down here never cease to point out, this must not be too hastily assumed. They constantly warn American visitors that (to paraphrase Kipling's famous phrase) "North is North and South is South, and never the twain shall meet." Latin Americans are essentially different from North Americans, they keep saying. "They just don't have the same mentality," one is always being told down here. And nowhere is this more true than in Argentina, Latin America's most progressive country, and Buenos Aires, its pushing, seething metropolis.

Buenos Aires is Chicago in body and Paris in soul. Its inhabitants can vie with anybody in the United States as business men; they think in terms of business, leap gladly to meet problems presented by big business projects and bold business ventures. Yet, deep down, they preserve, through thick and thin, unshakable sensitiveness to the culture and elegance and basic modes of thought of Continental Europe. Some of them, accustomed to seeing Englishmen in their midst, often indeed with an English strain in their blood, like England; but almost without exception every Argentino loves France.

France is his spiritual home, Paris his arthly Paradise. And, almost everywhere else on the European Continent—in Rome and Madrid, Vienna and Budapest and Stockholm—he finds something that appeals to his congenital Europeanism. Even in present-day Germany, though it shocks him with the blatancy of its nazism and the cruelty of its anti-Semitism, he does not feel entirely alien. After all, it is in Europe.

Therefore, it is difficult for us to persuade the average Argentino—or, for that matter, the average native of any part of Latin America—that he should turn his inmost thoughts away from Europe. Even when we use the most persuasive arguments, harping on the enormous advantages to be derived from Pan-American solidarity, he is only too prone to impute to us ignoble motives of self-interest.

In Argentina the majority of the inhabitants have always been dead against any form of Pan-American union. They opposed it even in the days of Bolivar, the great South American liberator, who dreamed of a sort of League of American Nations which should meet every little while on the Isthmus of Panama to discuss ways and means of furthering the welfare of all the States on this continent.

Argentine objections at that time were rather vague; since then, however, they have been crystallized into this single deep-seated conviction: any form of Latin-American union with the United States, no matter how informal and non-binding it may seem to be, must necessarily mean, in the long run, our domination of Latin America. That uneasy thought was in the minds of those who, when the Argentine delegation to Lima began its journey thither, reminded the world of traditional Argentinian policy. It was in the mind of Dr. Saavedra Lamas when he launched his book.

That is what pessimists down here delight in emphasizing, when talk turns to the prospects of a better understanding between the United States and the Latin-American countries. But they do not keep the field to themselves. Hardly are their gloomy words out of their mouths before the optimists surge forward to the attack.

Anti-Americanism in Latin America, according to them, is dead, for two good and sufficient reasons, viz.:

1. Our new Good Neighbor policy, on its own merits, quite aside from any menace to Latin America from totalitarian States overseas.

2. The lively foreboding aroused throughout Latin America by the surrender at Munich last September, of the two leading European democracies to the two leading European dictatorships, which set Latin-Americans to wondering how long it would be before the dictators turned covetous eyes on Latin America.

"It won't be long now!" croak believers down here in the Good Neighbor policy, "unless drastic steps are taken to prevent it." And, having got that off their chests, they continue somewhat like this:

"What drastic steps can Latin America possibly take without the guidance and effective cooperation of the United States? What Latin-American voice, addressing warnings to Europe, can possibly carry the weight of the voice of the 'Colossus of the North?'

"What thinking Latin-American can doubt for a moment the answer to those questions? Every aggression by dictators across the water stresses the necessity for solidarity—solidarity with a genuine significance and without the slightest trace of big stick-ism of North American domineering—between the United States and the twenty Latin-American republics."

With those words, or words resembling them, they fight the battle for a better relationship between the countries on this continent. If their exhortations bear fruit, history may yet show that genuine Pan-Americanism was born in the Autumn of 1938 at Munich.

This is the fifth of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

U. S. DEFENSE PLAN IS SHELVED AT LIMA AS ARGENTINES WIN

Latter, Skeptical of Threat From Totalitarian States, Take Over Drafting

LEAGUE PROPOSAL BURIED

Is 'Bequeathed to History'—Nazis and Fascists Set to Proclaim Our 'Failure'

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 14.—Argentina has assumed command of continental defense strategy at the Eighth Pan-American Conference.

Both President Roosevelt and Secretary of State Cordell Hull have painted the threat to American democracy as imminent and requiring instant preparations for defense. But this conference's policy on this issue being dictated by the absent Foreign Minister José Maria Cantilo of Argentina, who insists that there is no such danger, the Argentine delegation has taken over the drafting of whatever solidarity declaration is finally to be offered as a sop to those who, like the North Americans and some Latin-American republics, think the American nations should take some stand in the face of the totalitarian threat. The final text of this declaration will not come before the conference until it has been approved by Dr. Cantilo from Buenos Aires.

The draft is not expected to be ready before next week. After several days of secret conversations between Mr. Hull and the Argentine, Brazilian and Chilean delegation chiefs, a tentative formula was reached that appeared to have some probability of acceptance by everybody. The Argentine accepted with the proviso that they be permitted to draft the final text.

To Fit Cantilo's Speech

Mr. Hull went to the Argentine [illegible]

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCALSSIFIED

THIS PAGE IS UNCALSSIFIED

Mr. Hull went to the Argentine Embassy this morning to consult the drafters, whose objective is understood to be to make the declaration fit Dr. Cantilo's speech at the first plenary session.

[In that speech Dr. Cantilo said that "American solidarity is a fact" and that each country was ready to maintain that solidarity. "For this we do not need any special pacts," he declared, and added:

["We are resolved to resist with the same tenacity, either by preventive measures or by combined direct action, everything that implies a threat against the American order, to every infiltration of men or ideas that reflect or tend to implant in our soil and in our spirit concepts foreign to our ideas, ideals that are antagonistic to ours, regimes that menace our liberties, theories that threaten the social and moral peace of our people or political fantasies that cannot prosper under the sky of the Americas."]

Totalitarian agents have made an issue of this conference. They are conducting active propaganda against the United States throughout this continent. They are already preparing to broadcast to the world that the United States has suffered a defeat because she could not line up Latin Americans for a solid defense of democracy.

General Italo Campenni, one of Premier Benito Mussolini's most trusted agents in Latin America, arrived from Panama tonight as an "observer" at the conference. Officially he is the Italian Minister to Panama and the Central American republicans, but in practice he is understood to be an organizer of Fascist units throughout Central America.

He was with Signor Mussolini in his march on Rome. His arrival here at this time has aroused the keenest interest.

The conference's number one committee, before which will come whatever is to be done on the question of solidarity, spent an hour this morning listening to Luis Lopez de Mesa, chairman of Colombia's delegation, sing the swan song of the lost cause of an American League of Nations. He spoke in support of a joint project presented by Colombia and the Dominican Republic in 1936 at the Buenos Aires conference for the maintenance of peace, knowing it had no chance of adoption.

Señor Lopez explained that it was an ideal to which Colombia had been faithful for 112 years, referring the liberator Simon Bolivar's dream of a union of American republics. He reminded the delegates that the Buenos Aires conference considered the question of an American league premature and postponed its consideration to this

THE NEW YORK TIMES, THU[RSDAY, DECEMBER] 15, 1938.

U. S. TRADERS SPLIT ON ARGENTINE ISSUE

'Wheats' Advocate Firm Policy of Retaliation to Overcome Curbs on Our Exports

'MEATS' FOR CONCILIATION

Urge Ratification of Sanitary Convention to Win Friends in Buenos Aires

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

BUENOS AIRES, Argentina, Dec. 8.—Most American business men here favor one or the other of two local schools of thought, which, because of recent developments in American-Argentine commercial relations, have been named the Wheats and the Meats.

The Wheats, who advocate more firmness and less politeness in our dealings with Latin America in general and Argentina in particular, were delighted with the recent attempt of an enterprising American trader to sell American wheat in Brazil, a country which, so far as sales of wheat are concerned, the Argentines consider their own private hunting-ground.

If Washington had allowed this trader's plan to succeed, growl the Wheats, it would have constituted [...]

Sanitary Convention regarding Argentine meat. This would clear up a most unfortunate situation, as they see it, which stands as follows:

At present no meat may be imported into the United States from any part of Argentina, because of hoof-and-mouth disease. The American-Argentine Sanitary Convention, which cannot go into effect without Senate ratification, amends existing restrictions to allow meat imports into the United States from Patagonia, an Argentine zone where hoof-and-mouth disease has never appeared.

If, as a result of ratifications, meat should come to us from Patagonia, American cattle interests need not worry, according to the Meats, since Patagonia raises sheep, virtually no cattle. Only chilled lamb would come into question in our market because Americans will not eat chilled mutton. Difficulties of transportation from remote Patagonia are such that, according to a recent investigation, it could not be laid down in New York under 20 cents a pound, against a prevailing price there at the time of the investigation of only [...]

Slogan: Not Hitler, Stalin Nor Duce, but Roosevelt

Special Cable to THE NEW YORK TIMES.

MANAGUA, Nicaragua, Dec. 14.—The Nicaraguan Democratic Union was formed last night by prominent citizens to fight against foreign interference and cults. Its slogan is "Neither fascism, nazism, nor communism, but democracy."

The Noticia, one of Managua's largest newspapers, has adopted as its policy "Neither Hitler, Mussolini, nor Stalin, but Roosevelt."

ELECTION OF AGUIRRE RECOGNIZED IN CHILE

Congress Ends Long Dispute—Popular Front Cabinet Named

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Dec. 14.—Congress, in a plenary session this afternoon, proclaimed Pedro Aguirre Cerda as President-elect in the presence of the full house, with the exception of the Conservative party any other non-supporters of the Leftist victor in the recent elections.

Today's public act constituted official recognition of the triumph of the Popular Front candidate. It marks the definite end of a period of intense suspense concerning political developments.

During the day Señor Aguirre's first Cabinet was confirmed. His Ministers will be:

Interior—Pedro Alfonso, Radical.
Finance—Roberto Wacholts, Radical.
Foreign—Abraham Ortega, Radical.
Defense—Alberto Cabero, Radical.
Education — Rudecindo Ortega, Radical.
Agriculture — Arturo Olavarria, Radical.
Justice—Raul Puga, Democrat.
Labor—Antonio Poupin, Democrat.
Health—Miguel Etchebarne, Socialist.
Trade—Arturo Bianchi, Socialist.
Lands—Carlos Martinez, Socialist.

THIS PAGE IS UNCALSSIFIED

a long-needed retaliatory measure on our part against this country, which persistently discriminates against imports from the United States in favor of various European nations, including Britain and Germany.

When the Wheats are told that such retaliation would jeopardize the success of the Pan-American Conference at Lima, and subsequent harmony of relationship between ourselves and Latin America, they retort that they don't care a bit if it does, that the sooner such retaliatory measures come the better. They often garnish their remarks with outbursts of peppery profanity concerning our Good Neighbor policy which would profoundly shock President Roosevelt and Secretary of State Hull.

Meat Pact Is Advocated

But the Meats, on the other hand, recoil in horror when such rough tactics are advocated. Being all for conciliating Latin Americas, particularly the natives of Argentina, they feel that things like that wheat business in Brazil, which loosed a tempest of indignation here are extremely short-sighted, now that our Good Neighbor policy is likely to face a real test at Lima.

To insure the development of a more cordial attitude toward us down here, they enthusiastically advocate—and that is where they get their nickname—the ratification by our Senate of the so-called sanitary convention between the United States and Argentina, which would permit the introduction into the United States of meat from the southern part of Argentina.

Non-ratification of this convention is considered by the Argentines an insult to their national honor. Since it places on entire Argentina the stigma of seeking to export meat from livestock suffering from hoof-and-mouth disease, whereas, in reality, that disease is unknown in certain zones. The unratified convention prescribes that Argentine meat from such zones may be admitted into the United States.

Removal of the present stigma, it is argued, would not result in competition worthy of the name with Americans in the meat business, and would be such a satisfaction to the national pride of the Argentines as to bring us much valuable general trade with them, and increase our popularity among them. At least that is what the Meats contend.

The discrimination against us in Argentina, which so angers the Wheats, is worked this way: Importers of merchandise from various countries, among them Britain and Germany, pay at the official rate of exchange, whereas those importing American goods must pay for them at the "free market" rate. This amounts to a 20 per cent penalty on imports from the United States.

Moreover, at the present writing, importers of our products here have been having difficulty in obtaining permits to import even at the onerous "free market" rate, and have been faced with the possibility, after

New Zealand lamb of superior quality.

Of course, the Argentine Government could and probably would foot the deficit, or make the shippers do so, just to have the satisfaction of getting Argentine meat of some sort into the United States, where it has been so long under a stigma. But is is believed that governmental action of this kind, even if taken just after the ratification of the convention, could not last long in view of the essentially uneconomic nature of the whole business.

What Argentina really desires is a new market for chilled mutton, not lamb, because the United Kingdom absorbs as much lamb as it can get and Americans are adamant against consuming chilled mutton from Patagonia or anywhere else.

To sum up: ratification by the United States Senate of the American-Argentine Sanitary Convention, according to the Meats here, would not do away with adequate safeguards protecting livestock in the United States, since, in Patagonia, there never has been any hoof-and-mouth disease and all meat exported from there is carefully inspected.

Nor would ratification cause any except the most insignificant change in the status quo in the American meat market because of the great difficulties for meat exports from Argentine Patagonia. The only really important point involved, they say, is the fostering of good feeling between Argentines and Americans.

If we allowed Argentina to send Patagonian chilled lamb to New York—even so much as a single token shipment—our action would be looked upon here as a courteous gesture of good will, which might easily open up valuable Argentine outlets for American products.

U. S. Restriction Condemned

"Our restrictions against Patagonian meat," declared an American in Buenos Aires, "seem as logical as for an importing foreign country to bar Alaskan meat because hoof-and-mouth disease existed in Oregon, or as unreasonable as action by ourselves barring imports of meat from Denmark because there was hoof-and-mouth disease in France."

But the wheats don't want our Senate to bother with ratification of the American-Argentine Sanitary Convention. What they want is rough stuff. If, for instance, we should pour American wheat into Brazil, they insist, it would do more good to us down here in a business way—good will or no good will than any number of polite gestures. That is where they differ radically from the Meats on how we should deal with the Argentines.

"Pat 'em on the back!" coo the Meats. "Soak 'em in the jaw!" snarl the Wheats. Which will Washington heed?

This is the seventh of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

conference.

"Bequeaths" Idea to History

He said neither Colombia and the Dominican Republic nor other countries that favor their project have any desire to anticipate events. He aswed, therefore, if this conference still considered the proposal premature, that it at least carry over the project to some later conference.

"If the conference does not want to do this, we bequeath the project to history," he concluded.

The delegates broke into a great ovation at this point, which indicated that this would be the project's fate.

The committee's chairman, Dr. Afranio de Mello Franco of Brazil, announced the appointment of four subcommittees to study the large number of projects before the committee. The main group then adjourned until such time as one of its subcommittees has something ready for action.

The conference's many subcommittees settled down today to the routine chores on the Pan American Union's continuing program of measures that make it possible for the twenty-one American republics to live together as an international family more harmoniously than any other group of nations.

Since these comprise all but five or six of the items on the conference's twenty-three-point agenda, however, they will account for most of the work done here. Many experts on inter-American relations insist that these business conferences fully justify themselves by the work done on these constructive measures as well as by the personal contacts established among men directing the foreign policies of the American nations, even when there seems to be little progress on the more spectacular issues.

MEXICO'S ATTITUDE

now that our Good Neighbor policy is likely to face a real test at Lima.

To insure the development of a more cordial attitude toward us down here, they enthusiastically advocate—and that is where they get their nickname—the ratification by our Senate of the so-called sanitary convention between the United States and Argentina, which would permit the introduction into the United States of meat from the southern part of Argentina.

Non-ratification of this convention is considered by the Argentines an insult to their national honor. Since it places on entire Argentina the stigma of seeking to export meat from livestock suffering from hoof-and-mouth disease, whereas, in reality, that disease is unknown in certain zones. The unratified convention prescribes that Argentine meat from such zones may be admitted into the United States.

Removal of the present stigma, it is argued, would not result in competition worthy of the name with Americans in the meat business, and would be such a satisfaction to the national pride of the Argentines as to bring us much valuable general trade with them, and increase our popularity among them. At least that is what the Meats contend.

The discrimination against us in Argentina, which so angers the Wheats, is worked this way: Importers of merchandise from various countries, among them Britain and Germany, pay at the official rate of exchange, whereas those importing American goods must pay for them at the "free market" rate. This amounts to a 20 per cent penalty on imports from the United States.

Moreover, at the present writing, importers of our products here have been having difficulty in obtaining permits to import even at the onerous "free market" rate, and have been faced with the possibility, after Dec. 31, of not being able to get any permits, a state of affairs that has had a paralyzing effect on American-Argentine trade.

Even if the Argentine Government extends the time limit for permits, the uncertainty will remain, it is feared, with detrimental effects on business.

Trade Negotiations Failed

Endeavors to get treatment here for our products comparable with that accorded, under existing special agreements, to import from Britain and Germany, have consistently failed.

One of the main arguments of the Wheats is that pressure from the United States, similar to the recent contemplated sale of American wheat in Brazil, would make Argentina let down its barriers against imports from our country. But the Meats, in a panic, claim that the reverse might result, that the Argentines might raise those barriers still higher.

The now celebrated wheat deal with Brazil developed thus: we had a huge surplus of wheat to dispose of abroad; the American trader, whose doing so violently perturbed the Argentints, wanted to unload part of it in Brazil until frantic long-distance telephone calls from Buenos Aires to the Argentine Ambassadors at Washington and Rio de Janeiro abruptly stopped his activities, at least temporarily.

Just now, Argentines talk as if the American trader would not be heard of again in the Brazilian wheat market, but some of the local Wheats are not so sure. They hope that he and others like him, by sailing in and getting a share of the wheat profits now being reaped by Argentines in Brazil, may bring to an end Argentine discrimination against us.

But the Meats are horrified at such hopes. Would it be worth while, they ask, to risk losing Argentine good-will merely for the sake of the few million dollars that would accrue to us from the sale to Brazil of this wheat?

Argument for Ratification

And that brings the Meats to their favorite topic, the necessity for ratification by our Senate of the

except the most insignificant change in the status quo in the American meat market because of the great difficulties for meat exports from Argentine Patagonia. The only really important point involved, they say, is the fostering of good feeling between Argentines and Americans.

If we allowed Argentina to send Patagonian chilled lamb to New York—even so much as a single token shipment—our action would be looked upon here as a courteous gesture of good will, which might easily open up valuable Argentine outlets for American products.

U. S. Restriction Condemned

"Our restrictions against Patagonian meat," declared an American in Buenos Aires, "seem as logical as for an importing foreign country to bar Alaskan meat because hoof-and-mouth disease existed in Oregon, or as unreasonable as action by ourselves barring imports of meat from Denmark because there was hoof-and-mouth disease in France."

But the wheats don't want our Senate to bother with ratification of the American-Argentine Sanitary Convention. What they want is rough stuff. If, for instance, we should pour American wheat into Brazil, they insist, it would do more good to us down here in a business way—good will or no good willthan any number of polite gestures. That is where they differ radically from the Meats on how we should deal with the Argentines.

MEXICO'S ATTITUDE TO US TEMPORIZING

Press Assails 'Imperialism,' but Would Not Antagonize United States at Lima

Special Cable to THE NEW YORK TIMES.

MEXICO CITY, Dec. 14.—The press defends in editorials Mexico's right to trade with Germany, Italy and Japan, asserting that the Latin-American nations at the Lima conference have declared against United States as well as European imperialism. It is suggested that the Brazilian minorities plan may make it impossible for the United States to defend her minorities in Latin America.

Investigation indicates that these editorials represent majority sentiment among Mexican officials and the public. It seems to be generally held that various benefits are obtainable by not antagonizing "the Colossus of the North" at the Pan-American conference but that there must be no definite commitments.

Bars Interference

"In the name of democracy and freedom of commerce no attempt must be made to prevent Mexico's obtaining Japanese beans, German machinery and Italian silks," declares the newspaper Universal. "Even less can we turn our backs on the benefits of European culture under the slogan of combating political systems that do not suit us.

"Lima is showing that the Latin-American countries are opposed to becoming the satellites of any imperialism."

"The complicated problems attending the creation of any American League of Nations or inter-American Court of Justice," it goes on, "make these only utopian illusions. Neither is it probable that a military alliance be organized or the Good Neighbor policy affirmed by treaties."

The newspaper Novedades says:

"Mr. Roosevelt's dream of a Pan-American military alliance collapsed quickly. The frontal attack on continental sovereignty failed. Now, smiling like Mephistopheles, the United States diplomats prepare to offer us gold to buy their products and wait for beautiful young Latin America to fall into their arms full of love.

"Frankly, we should not trust the United States."

The Ultimas Noticias refers to the speech of Foreign Minister José Maria Cantilo of Argentina, in which he affirmed the principle of continental solidarity, but said Latin America must continue her trade and other relations with Europe, as "a cold shower for Secretary Hull's earlier remarks."

Europe a Good Market

"Between the lines of Dr. Cantilo's remarks," it comments, "it can be seen that Europe is a good market for Argentine products and may be a better one. Secretary Hull must have felt Dr. Cantilo's words decidedly disquieting."

The Ultimas Noticias also warns of "the unrestrained ambitions of Uncle Sam."

Only the newspaper Popular remarked that at least Dr. Cantilo and Secretary Hull had declared against fascism, "but," it added, "they expressed differing concepts."

A denial of Mexican newspaper reports that this government has entered into large oil contracts with the Japanese Government for 1939 was made by G. Espinosa Mireles, chief of the government Petroleum Export Division.

"We are selling cargoes of oil to Japanese commercial firms but have no set 1939 contracts," he told your correspondent.

Secretary of Finance Eduardo Suarez asserts that Mexico expects to sell somewhat more oil to the Japanese next year than this year. Expropriated American and British oil has been exchanged on a barter basis for Japanese beans. Several cargoes of this oil have been shipped via the Panama Canal.

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 14.—The State Department today advised Americans who desire to file claims againts Mexico for expropriation of their agrarian properties since Aug. 30, 1927, to communicate the facts of their cases, if they have not already received letters from the department or consular officers indicating the manner in which their cases should be prepared.

The cases are being taken up by the commission agreed upon by the two governments for adjustment, and the department has never been able to complete to its satisfaction a list of all Americans affected. Even though the United States Embassy in Mexico City has attempted to make a complete list, it is not certain that it has been entirely successful.

The twenty-seventh annual appeal for the Hundred Neediest Cases is made in today's issue of The New York Times.

In The Nation

Essential Differences in the Two Americas

12/16/38

By ARTHUR KROCK

WASHINGTON, Dec. 15.—In the diplomatic corps of Washington there is no surprise over the news from Lima that Argentina and other Latin-American nations are unwilling to go as far textually as the United States wants them to go in the message aimed at Berlin, Rome and Tokyo. The feeling in the corps also seems to be that, since this was to have been expected because of essential differences prevailing, the effort was an error in that it gives German, Italian and Japanese agents at Lima opportunity to claim victory on what was ever a foregone conclusion.

When Secretary Morgenthau on Monday volunteered his statement that the Treasury was studying means by which closer relationships might be established between it and the exchequers of other countries in the Western Hemisphere, the announcement was accepted as a practical and separate effort to protect the balance of United States trade in South America. As the Secretary said, Congressional authority will be required to expand the Export-Import Bank to a size sufficient to set up adequate dollar exchange in South America. Any loans or subsidies must also be authorized by Congress. It is unusual to launch so important a project in this way, but this, because of its practical importance, was not taken as meaning that Mr. Morgenthau was doing so as a matter of high policy in behalf of his colleague, the Secretary of State, at Lima.

Since this is conceded not to have been the motive, it is not surprising that dispatches from Lima revealed no effect on the Argentine-led position that nothing should be adopted that would imply a Pan-American alliance against any European nation, or would indicate that the other countries of the Western Hemisphere feel the situation abroad calls for large measures of national defense on their part. In diplomatic circles here the opinion is expressed that no United States proffer of service or aid could possibly remove the reasons for that attitude.

A Diversity of Interest

Brazil, Colombia, Panama and Cuba are in special situations with respect to Europe. Brazil is troubled by a Nazi-inspired minority and flooded with propaganda from Berlin and Rome. Also Brazil's close relations with the United States were being undermined by the German blocked mark and barter system until the Rio Government stepped in. The links between Colombia, Panama, Cuba and this country are in clear view. But with Argentina and

Chile, for example, things are different. Some of the most valued residents of Argentina are Germans and Italians who give no such trouble as their compatriots have given in Brazil, but at the same time retain close associations with their motherlands. Moreover, Europe and its markets are closer to Argentina than are ours.

Recent diplomatic history suggests the difficulty of a complete agreement between the Governments of the United States and Argentina on any draft in our own terms. Envoys stationed here do not cite the events to support a view that Argentina is proceeding out of resentment at Lima. On the contrary, they believe the view of the Buenos Aires Government would have been the same without the background; that Argentina would go to the aid of Brazil against European aggression, should that be attempted; and that the southernmost republic stands as firmly as the United States against any of the interferences from Europe which are the objects of Mr. Hull's text.

Yet the background is interesting and revealing as proof that, despite the arbitrary allocation of geography that divides the world into an Eastern and a Western Hemisphere (instead of a Northern and Southern), the interests of all the nations in the Americas are, by the testimony of our own official acts, not necessarily akin.

Snarls in Diplomacy

1. Some time ago, without previous notice to or consultation with Argentina, the State Department prepared to ask Congress for legislation which, as correspondence later published showed, was especially designed to lease six destroyers to Brazil. When the Buenos Aires Government heard about this it was resentful and, to some degree, offended, as much over the manner of the negotiation as over the plan in view. Congress has never passed the enabling act, but the memory remains.

2. When he visited the Argentine the President promised—or so his remarks were construed—to press for the ratification of what is called the "sanitary convention" by which a limited amount of Patagonian meat could be admitted to the United States. This convention has lived since in suspended animation.

3. Though the expedition of a former AAA official to Rio, in connection with credits for wheat purchases, was represented as a private deal, the Argentine Government thought it saw concealed evidences of American Government backing. And while the recent London negotiation to dispose of 25 million bushels of this staple was represented as a private and non-dumping transaction, there is a suspicion in Buenos Aires that unexpected publicity—as in the Rio incident—may have played a part in that.

The point is that nations may both be in the Western Hemisphere and still have conflicting interests that cannot be reconciled by financial interrelationships or stress on what, to one, seems a threat to the security of both.

VARGAS NOW ARBITER OF BRAZILIAN FUNDS

Decree Also Bans New Appointments to Government Offices

12/22/38

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, Dec. 21.—Government officials now enjoying the use of automobiles received a severe jolt as the result of a decree issued today by President Getulio Vargas. Unless officials are able to prove that the car is absolutely essential for business, it will be withdrawn from the official list.

In an effort to reduce government expenses President Vargas in his decree forbids new appointments to government offices. The decree also bans supplementary budget credits during the first six months of 1939 and also special credits during the first three months, unless by the special consent of President Vargas.

The President apparently has become the sole arbiter of government expenditures. Moreover, cities and States will not be allowed to issue bonds.

The Ministry of Finance is authorized to set up adequate machinery to fight contraband. The decree sets a time limit of six months when all contracts carrying special customs favors or duty reduction must be revised.

The 1939 budget shows an improvement over the previous two years. In 1937 the deficit was $42,296,119. In 1938 the deficit was $2,866,883, while there is an anticipated surplus of $2,734,748 for 1939.

BOLIVIA TO GIVE CUE ON EXPROPRIATION

Other Latin States Await the Outcome of Standard Oil's Appeal on 1937 Seizure

TWO PACTS LINKED TO ACT

Trade Treaties With Argentina and Brazil Based on Output of the Nationalized Wells

Special Correspondence, THE NEW YORK TIMES.

LIMA, Peru, Dec. 9.—In the widespread publicity that has attended Mexico's seizure of United States and British oil fields, it seems to have been forgotten that Bolivia was the first Latin-American government to confiscate a foreign-owned petroleum property.

The Bolivian seizure of the Standard Oil Company's concession preceded the Mexican seizure by a year, and other Latin-American governments that would like to follow the example are watching the developments of the Bolivian case even more closely than the Mexican situation.

The Standard Oil Company's $17,000,000 investment in Bolivia was declared forfeited under a decree issued by a de facto government on March 13, 1937, in which the company was charged with fraud. The company's appeal is still pending before the Supreme Court of Bolivia, but in the meantime the Bolivian Government has made new trade treaties with Argentina and Brazil based on the production of the oil wells seized from the Standard Oil Company.

Text of the U. S. Proposal on Solidarity

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 17.—Following is the text of the "Declaration of Lima," proposed today by the American delegation:

Declaration of the Principles of Solidarity of America.

Eighth International Conference of American States.

Whereas, the peoples of America have achieved a spiritual unity through the similarity of their democratic institutions, their unshakable will for peace, their profound sentiment of humanity and tolerance, and through their absolute adherence to the principles of international law of equal sovereignty of States and of individual liberty without religious or racial prejudice;

Whereas, on the basis of such principles and will they seek and defend the peace of the continent and work together in the cause of universal concord;

Whereas, a natural solidarity exists among American republics by virtue of which every action directed toward the alteration of the peace or independence which they enjoy is certain to provoke spontaneous and common reaction;

Whereas, the Inter-American Conference for the Maintenance of Peace held at Buenos Aires approved on Dec. 21, 1936, the declaration of the principles of inter-American solidarity and cooperation;

The governments of the American republics declare:

Reaffirm Their Solidarity

First, that they reaffirm their continental solidarity, their will to collaborate in the universal reestablishment of the principles upon which their solidarity is based.

Second, that in the defense of their own sovereignty and of American interests they will resist any threat either direct or indirect to their peace, safety or territorial integrity on the part of any non-American State.

Third, in the event that the peace of any American republic is menaced from without or within the American continent by activities of whatever kind which appear likely to impair the national institutions of an American country they proclaim their common concern and their determination to make their solidarity effective to resist such a threat.

Fourth, for this purpose they will coordinate their independent wills through the procedure of consultation provided for in existing agreements and in the declarations of inter-American conferences, using the means which circumstances in each case make advisable. It is understood that the governments of the American republics will act independently in their separate capacities with full recognition of their jurisdictional equality as sovereign and independent States.

To Meet Every Two Years

Fifth, in order to facilitate the consultation provided for this and other American peace instruments, the ministers of foreign affairs of the American republics shall meet every two years (but not in the years during which regular inter-American conferences are held) unless the high contracting parties may decide that as the result of prior exchange of views to postpone or eliminate any such biennial meetings.

Special consultations may be held by the ministers of foreign affairs on the initiative of any American government should the occasion therefor arise.

Each government may under special circumstances and for special reasons designate an alternate to substitute for its minister of foreign affairs.

Sixth, this may be known as the Declaration of Lima.

---

terpreted the contract unilaterally and revoked a previous resolution that had been mutually agreed upon by both parties to the contract.

The Supreme Court decided against the company. Thereupon the company filed an appeal attacking the substance of the resolution of July 2, 1931, and asking for its cancellation as a violation of contractual rights. The suit served as a stay to the previous ruling of the court, and a final decision has never been handed down.

Well Near Argentine Border

In 1925 the Standard Oil Company of Bolivia completed an oil well known as Bermejo No. 2, on its concession near the bank of the Bermejo River, the international frontier with Argentina. In that year the Standard Oil Company of Argentina, another subsidiary of the Standard Oil Company of New Jersey, began drilling a well immediately across the Bermejo River, and the management desired to use some of the crude oil from the Bolivian well as fuel for its boilers instead of cutting large amounts of wood in the neighboring forests.

Permission was obtained from the Argentine Government to move over a small quantity of this crude oil, and declarations were made to the Bolivian customs authorities, who issued certificates of origin. Between July, 1925, and April, 1926, a total of 704 tons (less than 5,000 barrels) was so moved and used in the Argentine operations. To facilitate the delivery of this oil a two-inch pipe line a few hundred yards long was laid across the Bermejo River. There was no export duty on oil leaving Bolivia. The import charges then in effect in Argentina were paid.

In 1935, nine years after this incident, accusations were made in the Argentine Congress that the Standard Oil Company of Argentina was secretly importing crude oil from Bolivia by means of a clandestine pipe line. ...ar Argentine Border

...the Standard Oil Com... Bolivia completed an oil ...n as Bermejo No. 2, on its concession near the bank of the Bermejo River, the international frontier with Argentina. In that year the Standard Oil Company of Argentina, another subsidiary of the Standard Oil Company of New Jersey, began drilling a well immediately across the Bermejo River, and the management desired to use some of the crude oil from the Bolivian well as fuel for its boilers instead of cutting large amounts of wood in the neighboring forests.

Permission was obtained from the Argentine Government to move over a small quantity of this crude oil, and declarations were made to the Bolivian customs authorities, who issued certificates of origin. Between July, 1925, and April, 1926, a total of 704 tons (less than 5,000 barrels) was so moved and used in the Argentine operations. To facilitate the delivery of this oil a two-inch pipe line a few hundred yards long was laid across the Bermejo River. There was no export duty on oil leaving Bolivia. The import charges then in effect in Argentina were paid.

In 1935, nine years after this incident, accusations were made in the Argentine Congress that the Standard Oil Company of Argentina was secretly importing crude oil from Bolivia by means of a clandestine pipe line. Considerable publicity ensued and the Argentine Government appointed an official commission to investigate and report. The commission made its report on Dec. 31, 1935, declaring the accusation was false.

$1,000 Royalty Paid

The Argentine press reports in connection with these accusations were published by the Bolivian newspapers, but the findings of the official commission did not receive the prominence given to the original accusations. In May, 1936, the company paid to the Bolivian Government the 11 per cent royalty on the 704 tons of crude oil used by the Standard Oil Company of Argentina, which at prevailing exchange rates was less than $1,000.

For several years the Bolivian Government had received credits and advance payments from the company, so that there was always a substantial balance on the government's books in the company's favor. This royalty payment, which was made despite the fact that the 704 tons of crude oil had not been sold, but had been given away, was deducted from the sum due to the company.

The allegedly clandestine delivery of this small amount of crude oil is the primary basis for the decree of March 13, 1937, ordering the outright seizure of the Standard Oil Company's $17,000,000 investment. In December, 1936, the military junta created a government oil enterprise to be known as Yacimientos Petroleferos Fiscales Bolivianos, modeled after a similar organization in Argentina.

Exploration Given As Purpose

The ostensible purpose of this organization was to undertake the exploration and possible development of the vast areas in Bolivia believed to have oil-bearing possibilities. In published statements YPFB has announced that Bolivia has from 44,000,000 to 50,000,000 acres of potential oil lands. At the time that YPFB was created the Standard Oil Company of Bolivia held a total of 690,000 acres, which, the company maintains, embraced all the oil production and refining facilities available in Bolivia.

On the afternoon of March 15, 1937, representatives of the recently established official government petroleum board suddenly appeared at the La Paz office of the Standard Oil Company of Bolivia and gave the company its first indication of the existence of a decree dated March 13. This ordered the forfeiture of all the company's possessions, alleging fraud, based on the "clandestine" exportation of petroleum and the failure to pay increased surface rentals, which were to become effective when production began.

The confiscatory decree was signed by the same President and the same Cabinet as the decree of Nov. 12, 1936, authorizing the return to the company of its 250,000-peso bond for having fulfilled the stipulated contractual obligations.

The decree of March 13 announced the annulment of the concession contract and further declared that all the property and possessions of the company located in Bolivia forthwith became the property of the State. YPFB was directed to take over the office and the company's records were sealed.

All Files and Books Taken Over

Company employes were ordered out and the right to take any papers was denied them. The government representatives took over all files, books and office equipment, simultaneously seizing the company's refineries, oil wells and other possessions throughout the republic. Outstanding accounts were ordered collected and all available funds were seized.

The government contended in the preamble to the ousting order that the company was guilty of fraud in that there had been production and exportation of oil in 1925-1926 (the 704 tons previously mentioned) and that the company had not declared this oil to be "production" under its contract covering the payment of the corresponding surface taxes thereafter.

The company contends that there was no fraud or concealment of any sort and that the decree of March 13, 1937, is, therefore, completely confiscatory, without basis in law ...r in contract. It is argued that ...he confiscation of the $17,000,000 ...vestment is supposedly justified ...y the allegedly clandestine ex...portation of crude oil, which was ...ot clandestine, illegal or violative ...f the contract, and by failure to ...ay the increased surface taxes— ... question that had been before the ...upreme Court of Bolivia for five ...ears awaiting legal decision.

property to the former owners would hurt Argentine and Brazilian interests and certain of the clauses in the treaties are so worded that they will automatically go out of effect at any time that the property is returned to private ownership.

Rights Bought in 1921

Fear of an impending petroleum shortage and increasingly high crude-oil prices gave impetus in 1921 to a world-wide search for new sources of oil. The Standard Oil Company of New Jersey went into Bolivia and with the formal approval of the Bolivian Government acquired by purchase from the Richmond Levering Company, an American corporation, the latter's rights to a concession originally granted in 1920 for the exploration for and exploitation of petroleum.

On July 27, 1922, the Government of Bolivia executed a contract with Standard Oil, approving the transfer and making certain modifications in the terms of the contract. These included imposition of surface rentals that had not been included in the original 1920 contract.

According to the contract of 1922, the company undertook to pay an annual surface rental of 2½ centavos, Bolivian currency, per hectare (2.471 acres) during the period of exploration. Article 30 of the new contract provided that when production commenced the surface rentals would increase on a sliding scale from 10 centavos to 50 centavos per hectare, the latter figure to apply on the seventh and following years after the production of petroleum had begun.

Subsequently, the government recognized as concessionnaire the newly organized subsidiary of the Jersey company, namely, the Standard Oil Company of Bolivia, a Bolivian corporation. This company undertook the immediate development of its new concession, which was situated in a most isolated and inaccessible region near the eastern foothills of the Andes.

$17,000,000 Was Invested

In accordance with the terms of its contract the company eventually drilled twenty-eight wells on the property. When the concession was declared forfeited by the Bolivian Government, the company had invested $17,000,000 in the drilling of these wells, in the erection of two small refineries, and in roads, camps, sanitation and other operations essential to oil development in a remote and sparsely inhabited area.

shortage and increasingly high crude-oil prices gave impetus in 1921 to a world-wide search for new sources of oil. The Standard Oil Company of New Jersey went into Bolivia and with the formal approval of the Bolivian Government acquired by purchase from the Richmond Levering Company, an American corporation, the latter's rights to a concession originally granted in 1920 for the exploration for and exploitation of petroleum.

On July 27, 1922, the Government of Bolivia executed a contract with Standard Oil, approving the transfer and making certain modifications in the terms of the contract. These included imposition of surface rentals that had not been included in the original 1920 contract.

According to the contract of 1922, the company undertook to pay an annual surface rental of 2½ centavos, Bolivian currency, per hectare (2.471 acres) during the period of exploration. Article 30 of the new contract provided that when production commenced the surface rentals would increase on a sliding scale from 10 centavos to 50 centavos per hectare, the latter figure to apply on the seventh and following years after the production of petroleum had begun.

Subsequently, the government recognized as concessionnaire the newly organized subsidiary of the Jersey company, namely, the Standard Oil Company of Bolivia, a Bolivian corporation. This company undertook the immediate development of its new concession, which was situated in a most isolated and inaccessible region near the eastern foothills of the Andes.

$17,000,000 Was Invested

In accordance with the terms of its contract the company eventually drilled twenty-eight wells on the property. When the concession was declared forfeited by the Bolivian Government, the company had invested $17,000,000 in the drilling of these wells, in the erection of two small refineries, and in roads, camps, sanitation and other operations essential to oil development in a remote and sparsely inhabited area.

The company maintained its concession contract in 1922, when crude oil was selling at high prices. During the next few years these quotations dropped sharply, making it impossible for Bolivian oil to compete with imported petroleum products at the centers of Bolivian consumption, owing to the absence of transportation facilities from the distant oil fields to the more inhabited parts of the country. Exportation to the Argentine market was impossible because of high transportation costs, plus Argentine's import duties.

The company's large investment had proved the existence of oil in Bolivia, at least in small quantities, but an intensive development of the fields could not be attempted in the absence of an available market, nor was it required under the terms of the contract. The concession was to last for fifty-five years, dating from July, 1922, and the company hoped that operations on a larger scale would be justified later.

"Production" Date an Issue

A question then arose between the government and the company as to the proper date to be fixed for the beginning of "production," for the purposes of taxation. The company maintained that as its operations had not reached a state of commercial production the period for the payment of the increased surface rentals had not arrived.

The government issued, on July 12, 1928, a supreme resolution in which, by agreement with the company, it was declared that, whether or not there was any production of petroleum, the exploitation rentals should begin Jan. 1, 1930. The company maintains that it has paid the graduated taxes consistently and that for some time before the seizure of the properties it was paying the maximum rate on the acreage that it still held.

On July 2, 1931, without previous advice to the company, the succeeding Administration issued a resolution revoking the resolution of July 12, 1928, and ordering the company to pay the surface taxes as if production had begun in 1924. The company appealed to the Supreme Court against the government's right to issue a resolution that in-

U.S. Trade in Uruguay Declines; She Buys Only Where She Sells

Officials Urge Us to Remedy the Situation by Stabilizing Our Trade—Policy of Bilateral Pacts Followed by Government

12/19/38

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

MONTEVIDEO, Uruguay, Dec. 10.—This is no place for Cordell Hull. That arch-foe of bilateralism in trade between nations is much better off just now at Lima, with the breadth of a whole continent between him and Uruguay.

For the latter, one of the smallest but also one of the most up-and-coming of the Latin-American republics, has turned itself, within the last four years, into a regular little citadel of bilateralism. It has applied and is still applying in its international business relations that famous saying of Artemus Ward: "You scratch my back and I'll scratch yours."

Under the guidance of César Charlone, Finance Minister and Vice President—now being mentioned here as a Presidential possibility—Uruguay is stubbornly buying almost entirely from those countries that buy from her. And, as the United States has been buying very little of late from this country, the latter is buying practically nothing from the United States.

A few years ago the total annual value of American-Uruguayan trade ran almost to $40,000,000; in two successive recent years we sold to the Uruguayans merchandise to a total annual value of more than $28,000,000. Now that trade is in a state of paralysis. A few years ago 95 per cent of the automobiles imported into Uruguay were American; now less than 40 per cent of them are. German cars have largely taken their place, also cars of English makes virtually unknown here in the heyday of our trade with this republic.

European Nations Gain Trade

That is typical. Great Britain, [illegible]

us, commercial or of any other sort—our democratic ideals appeal to them, they tell American visitors in their midst, our great men command their enthusiastic admiration. Uruguay makes bilateral agreements with Europe, they explain, solely because she is obliged to do so.

Europe calls the tune to which Uruguay must dance. How can that little republic be expected to antagonize European nations, now the heaviest buyers of the products that it must sell in order to live—nations which, if antagonized, would promptly buy elsewhere what they now get here, thus bringing ruin to Uruguay?

Americans Urged to Buy

"Buy more from us," Americans in Montevideo are told, "and watch the situation change."

Increased purchases by the United States, they point out, would greatly benefit our local sales of goods formerly disposed of here by American exporters in large quantities—manufactured and semi-manufactured articles, machinery, lumber, petroleum products, sugar, structural steel, automobiles, etc.

This correspondent was informed by one of the most prominent government officials in Montevideo that investigation had proved that the total of all the meat products imported into the United States from all the foreign countries exporting such articles to us—even including hams from Poland—would suffice to feed our population for only three days in each year.

"Make your imports of these products, from Uruguay and our neighbor, the Argentine, big enough to feed all Americans one week each year, instead of three days, and there will be a very different story to tell in our trade relations."

ican business men were present—men of varied experience, broad outlook, and keen intelligence.

"Either Uruguay gets out of the present situation," said one, "or we get out of Uruguay."

Another, a philosopher endowed with a sense of humor that all the business discouragements of recent years have not sufficed to shake, chuckled grimly:

"If I saw any figures nowadays which did not show that my business was in the red I wouldn't know how to read them! My only hope is that I continue to get together money enough to buy red ink for making entries in my books!"

No, Uruguay, in its present bilateral phase, is not for Secretary Hull. He would not enjoy hearing leading Uruguayans now in the saddle expound — and extol — the Charlone you-scratch-my-back-and-I'll-scratch-yours system of international trade. But Dr. Hjalmar Schacht would.

This is the eighth of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

MONTEVIDEO, Uruguay, Dec. 10.—This is no place for Cordell Hull. That arch-foe of bilateralism in trade between nations is much better off just now at Lima, with the breadth of a whole continent between him and Uruguay.

For the latter, one of the smallest but also one of the most up-and-coming of the Latin-American republics, has turned itself, within the last four years, into a regular little citadel of bilateralism. It has applied and is still applying in its international business relations that famous saying of Artemus Ward: "You scratch my back and I'll scratch yours."

Under the guidance of César Charlone, Finance Minister and Vice President—now being mentioned here as a Presidential possibility—Uruguay is stubbornly buying almost entirely from those countries that buy from her. And, as the United States has been buying very little of late from this country, the latter is buying practically nothing from the United States.

A few years ago the total annual value of American-Uruguayan trade ran almost to $40,000,000; in two successive recent years we sold to the Uruguayans merchandise to a total annual value of more than $28,000,000. Now that trade is in a state of paralysis. A few years ago 95 per cent of the automobiles imported into Uruguay were American; now less than 40 per cent of them are. German cars have largely taken their place, also cars of English makes virtually unknown here in the heyday of our trade with this republic.

European N[at]ions Gain Trade

That is typical. Great Britain, Germany, Italy and other European nations have gobbled up the bulk of the business that was ours before bilateralism à la Dr. Schacht raised its head here. The Uruguayans are turning from us to Europe because of the lack of dollar exchange.

Britain buys heavily from Uruguay, whose principal articles of export are chilled fresh meat—which we cannot take at all under present regulations, since hoof-and-mouth disease exists among livestock here—canned corned beef, wool, hides, packing-plant by-products, and linseed.

Germany also is a heavy buyer. So is Italy. Therefore, Uruguay, true to the basic tenet of bilateralism, buys big quantities of goods from those European competitors of ours.

High government officials in Montevideo urge us to remedy the sad mess into which our trade has fallen by stabilizing our purchases from Uruguay, so as to give exporters here a firm basis on which to make their calculations. Before the present stagnation, they complain, we would buy, during one year, a large amount of some Uruguayan product—wool, say—thereby encouraging local exporters to base their plans for the future on a similar annual demand from us. But—the very next year, perhaps—our purchases would drop sharply, without warning, to the dismay of Uruguayan exporters, who often suffered severe losses.

Europeans Act Differently

European nations, on the other hand, act quite differently: the totalitarians, Germany and Italy, guarantee to Uruguay a certain fixed yearly total of purchases of Uruguayan products. And Britain, though unable, like European States run dictatorially, to provide a similar guarantee by the simple expedient of ordering British importers to import this or that quota from Uruguay, easily absorbs, year in, year out, all the Uruguayan meat allowable under the Ottawa agreements.

"Why do you not follow European examples?" Americans here are asked. "Why do you not scrap your theories and get back your Uruguayan business?"

Uruguayans insist that, in their country, there is no hostility toward us, commercial or of any other sort—our democratic ideals appeal to them, they tell American visitors in their midst, our great men command their enthusiastic admiration. Uruguay makes bilateral agreements with Europe, they explain, solely because she is obliged to do so.

Europe calls the tune to which Uruguay must dance. How can that little republic be expected to antagonize European nations, now the heaviest buyers of the products that it must sell in order to live—nations which, if antagonized, would promptly buy elsewhere what they now get here, thus bringing ruin to Uruguay?

Americans Urged to Buy

"Buy more from us," Americans in Montevideo are told, "and watch the situation change."

Increased purchases by the United States, they point out, would greatly benefit our local sales of goods formerly disposed of here by American exporters in large quantities—manufactured and semi-manufactured articles, machinery, lumber, petroleum products, sugar, structural steel, automobiles, etc.

This correspondent was informed by one of the most prominent government officials in Montevideo that investigation had proved that the total of all the meat products imported into the United States from all the foreign countries exporting such articles to us—even including hams from Poland—would suffice to feed our population for only three days in each year.

"Make your imports of these products, from Uruguay and our neighbor, the Argentine, big enough to feed all Americans one week each year, instead of three days, and there will be a very different story to tell in our trade relations," he declared.

Meanwhile, every three months, the Bank of the Republic of Uruguay makes a careful compilation of what each foreign nation buys here, and then—strictly in accordance with this compilation—the bank calculates what Uruguay shall buy from each foreign nation. Which means that we, rigidly consistent in our adherence to anti-bilateralism, are almost entirely out of the running when Uruguay apportions her commercial favors.

No Resentment Shown

And, apropos of consistency: the British, who are bilateralists in this country because bilateralism here favors exports from Britain, are anti-bilateralists in neighboring Brazil, because there it favors the Germans—business is business!

An interesting point about the present situation in Uruguay is that quite a number of local Americans feel no resentment at the Uruguayan attitude. Indeed, they consider it largely justified. Among them, there is little or none of the clamor typical among Americans in Argentina that we should crack down hard on recalcitrant Latin-American republics that balk at playing the international trade game according to Washington's rules.

Various ways out of the present mess are suggested by Montevideo's American business colony; some of its members advocate reduction of our tariff barriers against certain Uruguayan products; others advance pet theories that seem to them the only solution; still others come out flatly in favor of bilateralism or something like it and even use, in their arguments, that word so out of favor in Washington nowadays—barter.

But they usually admit that, after all, little Uruguay, with her population of a mere 2,000,000, is far from important enough to justify any drastic change in our theories of international trading. Therefore, as a rule, they are resigned—merely waiting for something or other to turn up that will make prospects more promising.

The existing state of affairs, they fear, cannot last much longer without serious consequences. This correspondent attended a luncheon here at which several leading American business men were present—men of varied experience, broad outlook, and keen intelligence.

"Either Uruguay gets out of the present situation," said one, "or we get out of Uruguay."

Another, a philosopher endowed with a sense of humor that all the business discouragements of recent years have not sufficed to shake, chuckled grimly:

"If I saw any figures nowadays which did not show that my business was in the red I wouldn't know how to read them! My only hope is that I continue to get together money enough to buy red ink for making entries in my books!"

No, Uruguay, in its present bilateral phase, is not for Secretary Hull. He would not enjoy hearing leading Uruguayans now in the saddle expound — and extol — the Charlone you-scratch-my-back-and-I'll-scratch-yours system of international trade. But Dr. Hjalmar Schacht would.

ARGENTINES TYPIFY ANTI-AMERICANISM

Shady Promoters of Past Left Legacy of Distrust for Our Business Men

3 FACTORS NOW AID US

These Are Fear of British Domination, Good Neighbor Policy and Nazi Threat

12/20/38

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

BUENOS AIRES, Argentina, Dec. 14.—Buenos Aires is the hub of opposition to the United States on this continent. Prejudice—which seldom becomes actual hostility individually but often develops into suspicion of "North" Americans collectively—is to be found, in some form or other, all over Latin America, even in essentially pro-American Brazil. But nowhere does the visitor from the United States find it so frankly, frequently and forcibly expressed as here in the Argentine metropolis.

In view of this, American residents of Buenos Aires are convinced that, no matter what the practical results of the Pan-American Conference at Lima, Buenos Aires is the logical base from which to press whatever advantages—and combat whatever disadvantages—that conference may prove to have brought to our interests in Latin America. The Argentine republic, they keep reminding one, though it has only 13,000,000 inhabitants, of whom some 4,000,000 live in and around this city, is by far the most progressive and the wealthiest of all Latin-American countries, the one that carries most weight among its fellow-republics. And in accordance with the course taken during the next few years by American-Argentine relations, they assert, our influence in the whole of Latin America is sure to rise or fall.

Antipathy Frankly Voiced

One American at least, the writer of this article ,is glad to have been here and not in Lima while the eighth Pan-American Conference was in session at the latter city. [illegible]

manager of the local branch of a rich and powerful American business house that he was not at all sure that this branch really had anything whatsoever to do with the home office—as its manager and the sign in front of its door proclaimed.

"Don't you say that just to impress us down here?" inquired the doubter—and the worst of it was that he was in earnest!

Americans Reply Vigorously

Americans in Buenos Aires do not take this sort of thing lying down. They come back good and hard with telling arguments to prove that they are a most valuable asset to this metropolis. They point, for example, to the fact that, whereas local British banks and other big concerns tend to employ a large proportion of Britons, imported for the purpose fromEurope, American business houses employ a majority of natives, thus opening to the latter a future of prosperity and importance denied to them by our British competitors.

"Of the employes of one big Buenos Aires American concern," this correspondent was told, "ninety per cent are natives—and another, employing 500 persons, has only thirteen Americans on its payroll!"

To the retort of Englishmen and pro-English Argentines that English-owned railroads in this country employ more natives than any other foreign employer or group of employers, American residents shake their heads in doubt.

"How about the automobile business?" they ask—and they set out to show that, what with the Argentines who sell American automobiles—which enormously outnumber all others here—and paint them, and repair them, and drive them, and pump gasoline into them, the supremacy of British-owned Argentine railroads as employers of natives of this republic is by no means as great as is claimed—assuming that it exists at all.

To say that this country is a focus of anti-American prejudice does not mean at all that this prejudice is unanimous here; on the contrary there is an element among the Argentines that is distinctly partial to us. Three causes have contributed of late to strengthening it:

The first of these, which dates back some years, is the belief among certain prominent natives of this republic that British influence has been allowde to get too powerful in Argentina.

"If only you Americans would build just one railroad down here!" an important local personage exclaimed to me in Buenos Aires. "All our big railroads are British—which is too many for our good!"

The second cause, of comparatively recent growth, is the general improvement in American-Argentine relations caused by the Roosevelt-Hull Good Neighbor policy. Here

American Brazil. But nowhere does the visitor from the United States find it so frankly, frequently and forcibly expressed as here in the Argentine metropolis.

In view of this, American residents of Buenos Aires are convinced that, no matter what the practical results of the Pan-American Conference at Lima, Buenos Aires is the logical base from which to press whatever advantages—and combat whatever disadvantages—that conference may prove to have brought to our interests in Latin America. The Argentine republic, they keep reminding one, though it has only 13,000,000 inhabitants, of whom some 4,000,000 live in and around this city, is by far the most progressive and the wealthiest of all Latin-American countries, the one that carries most weight among its fellow-republics. And in accordance with the course taken during the next few years by American-Argentine relations, they assert, our influence in the whole of Latin America is sure to rise or fall.

Antipathy Frankly Voiced

One American at least, the writer of this article ,is glad to have been here and not in Lima while the eighth Pan-American Conference was in session at the latter city. In Lima he would all too probably have found rhetoric obscuring reality; he would have been compelled to struggle constantly against letting flowery oratory gloss over divergences of opinion and clashes of national interests. But, in Buenos Aires, he has run no such risk; just as in Washington one gets the clearest picture of c Latin-American policy as we see it, here one gets the clearest picture of that policy as we do not see it.

Prejudice against us here elicits biting gibes at our experse. For instance, our endeavors to persuade Argentina and the rest of Latin America to turn away from Europe in favor of an orientation based primarily on the Americas inspired one leading Argentine statesman the other day to point out that our arguments were inconsistent, in view of our record in the Philippines and Hawaii, which could hardly be adduced as proof that we had always confined our attention exclusively to this hemisphere.

Another commentator here inquired:

"Suppose we Latin Americans lined up with the United States against the paril of aggression from Europe, presumably from the totaltarian States, what guarantee would we have that, if you Americans suddenly fell out with the British, you would not expect us to follow suit, though the British are not totalitarians at all?"

Uruguayan Sounds a Warning

And a journalist in neighboring Uruguay, where people usually think in agreement with the Argentines, wrote recently, in allusion to Rooseveltian appeals for solidarity between North and Latin America:

"No matter how noble and fine President Roosevelt's intentions may be, we must not forget that, in every international union between a strong and a weak nation, the protection of the latter tends to become transformed into pressure by the former * * *

"Moreover, with regard to foreign protection in general, what happened to Czecho-Slovakia provides food for thought. That country was offered defense of its frontiers, the most ample and surest protection, and it was made to incur enormous expense in order to perfect its defensive system within a general scheme of cooperation with its allies, only to have the latter tell it to hand over that defensive system to the very nation against which it was to have been protected."

One of the commonest beliefs about Americans down here is that they are mere bluffers. This attitude has been fostered partially by past performances of shady promoters from the north; and so persistent is their unsavory memory that, according to one American business man in Buenos Aires, the ill effects thereof—together with those due to other causes—will not be entirely eradicated for two generations.

The curious impression that apparently respectable American concerns may be no better than fly-by-night bluffers was laughably manifested in Buenos Aires the other day when an Argentine told the tines who sell American automobiles—which enormously outnumber all others here—and paint them and repair them, and drive them and pump gasoline into them, the supremacy of British-owned Argentine railroads as employers of natives of this republic is by no means as great as is claimed—assuming that it exists at all.

To say that this country is a focus of anti-American prejudice does not mean at all that this prejudice is unanimous here; on the contrary there is an element among the Argentines that is distinctly partial to us. Three causes have contributed of late to strengthening it:

The first of these, which dates back some years, is the belief among certain prominent natives of this republic that British influence has been allowde to get too powerful in Argentina.

"If only you Americans would build just one railroad down here!" an important local personage exclaimed to me in Buenos Aires. "All our big railroads are British—which is too many for our good!"

The second cause, of comparatively recent growth, is the general improvement in American-Argentine relations caused by the Roosevelt-Hull Good Neighbor policy. Here, as well as elsewhere in Latin America, it has made a favorable impression—though, one must acknowledge, President Roosevelt and Secretary of State Cordell Hull have made more of a hit with the average Argentine as individuals than as exponents of political and economic theories.

Totalitarian Threat Helps Us

The third cause, most recent of the trio in making its appearance, is the apprehension aroused all over Latin America by the surrender of democracy to totalitarianism at Munich last September. This greatly strengthened the arguments of friends of ours in these parts who have been insisting ever since Nazism and Fascism began to show their claws, that Latin America may fall an easy prey to totalitarian invasion unless protected by the full armed power of the United States.

Yet, in spite of the gains accruing to pro-Americanism in Argentina from these three considerations, the fact remains that it comes more easily to the average inhabitant of this land to be against than for the United States.

"If the German Nazis continue to act as aggressively as they are now acting," said the same important local personage who sighed because there was no American-owned railroad in Argentina, "those of my fellow-countrymen who now refuse to see the necessity of American protection for their native land will undoubtedly be cured of their blindness. And since, in my opinion, the Nazis will plunge right ahead with their aggressiveness, the relations between this country and yours, as well as those of the United States with Latin America in general, are bound to improve."

This is the ninth of a series of articles of M. Ybarra, who is making a tour of South and Central America.

AMERICAS DIVIDED IN OPINION OF U. S.

Brazil Most Friendly to Us and Fearful of Nazis, Observer Finds

ARGENTINA MOST HOSTILE

Uruguay Plays Prudent Game —Chile Awaits Clue From New Leftist Government

By T. R. YBARRA

By Air Mail to The New York Times.

SANTIAGO, Chile, Dec. 21.—Having visited, while the Eighth Pan-American Conference was in session at Lima, the three most important Latin-American Republics south of Panama—Brazil, Argentina and Chile—and the smallest, Uruguay, this correspondent is in a position to view his impressions of the four in perspective, and draw from them the following deductions:

Of the four, Brazil has the liveliest sense of the Nazi German peril. She has a population of German blood which totals close to one million and is fully alive to its possibilities as a nucleus for Nazi aggression. This, some Brazilians fear, might even take the form of subversive political action, or, if worse came to the worst, of actual invasion.

Therefore, the present Brazilian Government has struck hard at Nazi assertiveness by dissolving Berlin-inspired organizations and forbidding teaching in German in the schools of the States of Rio Grande do Sul and Santa Catharina, where the Germanic element is strongest. It has also made a show of military force in the latter.

Reich Uses Trade Weapon

But the Germans hold good cards in their poker game with Brazil. By heavy purchases of Brazilian products, notably cotton and coffee, they force on Brazil their bilateral barter theories of international trade, obliging that country to take payment for exports to Germany in the notorious Aski, or compensation marks, which are exchangeable only for goods made in Germany.

The Brazilian Government, headed by President Getulio Vargas, has shown a strong desire to shake itself loose from its subservience to Nazi commercial methods, but it must be cautious. For Berlin could switch German purchases of goods now supplied by Brazil to other markets if the Brazilians got too hard to handle. Therefore, the Vargav Government is again and again forced to bow to Aski-Nazi influence.

Brazil is the most pro-American of the republics visited by this writer. The Brazilians, as a whole, have seldom if ever succumbed to Yankeephobia as acutely as other Latin Americans, even at periods of Latin-American history when that disease was most rampant; nor have they let fear of "Yankee imperialism" rob them of their night's sleep.

They admire our democratic institutions and ideals, and they have proved how highly they have estemed, in the past, the doctrine which binds us most closely to Latin America by calling the ornate building in Rio de Janeiro where their Senate meets the Monroe Palace.

They like to do business with us. But—they inform the North American visitor to their counrty—they wish we would pay more attention to the Brazilian market, use more common sense in our dealing there—stop, for one thing, telling Brazilians what they ought to want instead of giving them what they do want.

Many Brazilian importers consider our products the best in the world and are willing to pay a somewhat higher price for them than they would have to pay for similar articles imported, say, from Germany; but they are often alienated by our casualness in seeking orders, by what they deem our short-sightedness, especially exemplified by the refusal of our manufacturers to grant easier terms of payment. Brazilian importers easily get goods in Europe and pay for them many months later, but Americans are usually adamant in demanding prompt payment.

Argentina Most Hostile

Of all South American republics, Argentina is the most anti-American. Long-dormant fear of American domination of Latin America woke up among the Argentines as the date of the Lima conference drew near, until, on the eve of the conference, it had assumed a chip-on-the-shoulder attitude invisible only to the blindest of wishful thinkers. It was undoubtedly encouraged by German under-cover work—also British.

Despite certain disquieting signs on their national horizon, the Argentines are feeling pretty cocky just now. Quite a number of them are making money, there is a growing feeling of national self-confidence; the I'm-as-good-as-anybody-and-better-than-most attitude that has characterized Argentines for years is becoming more self-assertive. It caused many of them to adopt a suspicious and carping tone toward the Lima conference. During its sessions they believe, or acted as if they believed, that Secretary of State Cordell Hull, in league with President Roosevelt, would try to "put something over" on Latin America.

In Buenos Aires this Winter the tendency was to sneer at American reminders of the German peril as transparent camouflaging of sinister designs in Washington to impose the hegemony of the United States on Latin America; and there was open advocacy of the necessity of halting at Lima the possibility not only of potential aggression from overseas but also from North America.

There was resentment likewise at what were considered tactless and unintelligent endeavors on our part to turn Argentina, as well as the rest of the Latin-American countries, against Europe before Europe had done anything specific against Latin America. This was clearly brought out in the Lima address of the Argentine Foreign Minister, José Maria Cantilo, when he called attention to the big cultural debt Argentines owed to Europeans and pointedly mentioned among the latter Germans and Italians.

As a rule, people in Argentina absolutely refuse to consider the danger of aggression from non-American countries; and if they do, they like to insist that it would be well nigh impossible for a hostile fleet to strike a blow at uBenos Aires, in view of its distance from the sea, the shallowness of the River Plate, which forms its harbor, and the ease with which that harbor could be sown with deadly mines. All of which feeds the self-starting cockiness of the average Argentine—and bolsters his anti-Americanism.

Uruguay Moves Cautiously

Little Uruguay, just across the River Plate estuary from Buenos Aires, is obliged to play a prudent game, because she is wedged in between two much bigger and stronger neighbors, Brazil and Argentina, either one of which could crush her if she should ever get into a quarrel. For this reason—and also for other reasons traceable more to local prejudices and sympathies—Uruguay usually follows Argentina's lead.

In Montevideo, while the Lima conference was on, this correspondent, for instance, was told by one of the most prominent Uruguayan officials that Uruguay was opposed to a Pan-American Court of Justice, and to a Pan-American League of Nations—an attitude which ranged her on the isde of Argentina.

Aside from that, the main thing that struck the visitor to Uruguay at the end of 1938 was that she was a regular little citadel of bilateralism. Uruguayan purchases abroad were made to conform strictly to foreign purchases of Uruguayan goods, with the result that Germany, which absorbed much from the smallest South American republic, stood high in favor, whereas the United States, which absorbed little, was in deep disgrace.

Indeed, not long before this writer was in Montevideo, American goods were piled mountain-high on the docks of that seaport, because those who had ordered them simply could not get permits for importing them into the country. Subsequently, the Uruguayan Government allowed these goods to be cleared in driblets, and for some time these driblets constituted all there was of United States exportation to Uruquay. Later, when even those driblets dried up, American-Uruguayan trade fell into a state of coma.

Another impression made on the foreigner in Montevideo was the way officials there were playing down, politely but firmly, any excess of emphasis on the democratic idea in government. Being the heir to a regime which has savored strongly of dictatorship, and with its own skirts none too clear of dictatorial mud, the government felt that praise of democracy, under existing conditions, would be too much for the average Uruguayan to stomach. To be sure, it was showing a tendency toward resuming democratic forms—for instance, it was getting on something like speaking terms with the opposition—but, nevertheless, outspoken enthusiasm for the kind of thing that Thomas Jefferson liked was considered bad form in governmental Montevideo a few weeks ago.

Chileans Watch Left Regime

As for Chile, this writer has just got there and still busy digesting first impressions. As a starter, he can say that the country is in a states of great uncertainty owing to the fact that nobody knows just how the new Popular Front government, headed by Pedro Aguirre Cerda, will act. Until the present doubt is dispelled as to what course it will steer politically, socially and economically, the business community and everybody else here cannot make any trustworthy prophecies as to the immediate future.

Aside from that, one can say that Chile will continue to fight hard against the dire effects of the depression which engulfed her a few years ago; that she will present a strong front against Nazi and other Rightist movements and, in general, favor democratic principles; that her people fear Nazi German aggression less than Brazilians and more than Argentines; and that she is making as strenuous a bid for national ecnoomic self-sufficiency as Uruguay is making for bilateralism in foreign trade. All of this will be amplified in subsequent articles.

Meanwhile, here as well as everywhere else in Latin America, the conference at Lima has aroused great interest and filled columns of newspaper space. After reading a batch of clippings from home, just air-mailed to him from New York, and comparing them with what he has seen, heard and read in South America, this correspondent has the impression that, with regard to Pan-americanism in its present phase, most of the dreaming and wishful thinking has been done in the supposedly unromantic United States and most of the "hard-boiled" facing of facts in supposedly romantic Latin America.

This is the tenth of a series of articles of Mr. Ybarra, who is making a tour of South and Central America.

THE NEW YORK TIMES, TU

GERMAN TRADERS WIN MORE IN CHILE

British Suffer Most as Reich Continues Drive to Dominate Important Market

U. S. STILL IS IN THE LEAD

Aski Marks, Low Prices, Long Credit and Official Pressure Are Berlin's Weapons

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

EN ROUTE FROM CHILE TO PERU, Jan. 10.—Germany is doggedly pushing ahead in her campaign to get the lion's share of Chilean trade. Though the United States occupies first place, both as an exporter to Chile and an importer of Chilean products, whatever gains there have been recently in foreign business with Chile have been registered largely by our German competitors.

But there is one point about the situation from which Americans can draw consolation—Germany's advance has been not so much at the expense of the United States as at that of Great Britain.

In Chile, as in other Latin-American lands, the German drive for trade is based largely on bilateral agreements and on the employment of Aski marks. These, in which the Germans pay for their imports from abroad, are exchangeable only for German goods.

Chileans, like other Latin-American exporters, are forced to take German merchandise in lieu of money when they ship their products to Germany. To make such dealing attractive the Germans sell Aski marks at temptingly low rates.

How Germans Get Orders

But that is not the only reason for their success. In Chile, as in other parts of Latin America, they get the business away from Americans and Britons—especially from the latter—by the method eloquently illustrated by the following anecdote, told me by the head of a mining concern in Santiago, the Chilean capital:

His firm wanted to import a big lot of machinery. They first ap-

ing in value 77 per cent of the total taken by them between January and October, 1937, thus maintaining themselves with far greater success than either Americans or British. Expressed the other way around, American purchases from Chile for the first ten months of 1938, compared with the corresponding period in 1937, dropped 56 per cent, those of Britain 55 per cent, those of Germany only 23 per cent.

The Germans did even better than these figures show, because nitrate exports from Chile are kept secret, and it is well known that, in 1938, Germany took a large part of the Chilean nitrate production.

These large German importations of Chilean nitrates may surprise those who remember that it was Germany who, before and during the World War, nearly ruined Chile's nitrate industry—which had previously been a world monopoly—by inventing and developing the process of making synthetic nitrate. But, despite this invention and its subsequent intensive development by the Germans, synthetic nitrate remains inferior to the Chilean product as a fertilizer for potato crops, and since potatoes are among the principal food staples of Germany, she continues

period. In 1937 Germany, like the United States, dropped back a bit, but her exports in this line still totaled in value nearly 16,300,000 pesos, or 176 per cent more than in 1934, as against our gain for the same period of 135 per cent.

During those years Great Britain lagged far behind. In 1934 the total value of the machinery she exported to Chile was worth a little over one-half the value of Germany's exports and only about one-fifth of ours. For 1937 exports of British machinery to Chile slumped still further, representing in value considerably less than one-fifth of those from Germany and less than one-tenth those from the United States.

This makes one wonder whether the spirit typified in the following anecdote may not be partly responsible:

A South American firm placed a large order for machinery with a highly conservative British concern manufacturing machinery, one of those that had been in existence a century. All was moving smoothly until the South Americans asked the Britons to paint the machinery red instead of green. The Britons gasped with horror.

They said frigidly, "Our machines have always been painted green."

"But won't you, for the sake of [illegible]

tenths of her total consumption of these products.

Shipping Competition Started

Germany is pushing her gains hard. In addition to her usual methods—Aski marks, low prices, long terms of credit, official pressure from Berlin on Germans in Chile and Chilean importers and exporters—she has advanced to the attack with a new and threatening weapon. Recently a fine new German steamer, the Patria, appeared in Chilean waters, and it was announced that she would be one of four well-appointed German ships that would make the run in the Pacific from Chile to Europe.

For the first part of this run—between Chilean ports, via Peru, Ecuador and Colombia to the Canal Zone—this will undoubtedly bring competition to the American line of steamships that, for many years has been most prominent on th[e] east coast of South America. An[d] both for that section and the o[ne] between Panama and Europe, [it] will make British and other sh[ip]ping companies look to their laure[ls].

In short, Germany's fight [for] Chilean trade is just as bitter a[nd] as ruthlessly conducted as her fight in Brazil and Argentina and all over the rest of Latin America. This was proved vividly by the experience of an energetic American who, having just arrived in Santiago, sallied forth, from his hotel, full of determination, to book orders for his firm. He returned at lunch time in a state of deep dejection.

"Many Germans aroun[d?]" I inquired.

"Many?" he snorted. "Why, man, they're as thick as flie[s!]"

This is the fourteent[h] [illegible] of a series of articles of Mr. Y[b]arra, who is making a tour of Lat[in] America.

Soviet Arctic Ship May Drift to the Pole; Explorers Confirm Data on Wind Factors

Wireless to THE NEW YORK TIMES.

MOSCOW, Jan. 16.—Observations taken by the little scientific party on board the Syedoff, Soviet icebreaker that is accidentally making a polar expedition because it got caught in the ice fifteen months ago, are confirming the findings of the late Dr. Fridtjhof Nansen on the polar ship Fram nearly a half century ago that wind is the major factor in the speed and direction of ice floe movements.

This explains why the Syedoff has made no progress northward in the past two months but has followed a tight spiral course westward, just north of the eighty-fourth parallel. It has been buffeted by winds from every direction, though mainly from the north, and it has been pelted by blizzards.

From its northernmost position of Lat. 85 degrees 39 minutes N.—only a few miles short of the northernmost point reached by the Fram—and Long. 126 degrees 16 minutes E. on Nov. 14, it has now by a series of small loops reached a position, according to the latest data obtained today by the Northern Sea Route Administration, of Lat. 84:38 N. and Long. 123:16 E.

However, Professor Nikolai Zuboff of the administration explained today that capricious winds of the past two months had given way to stabler weather and that the Syedoff's movements were now controlled more by ocean currents. The sea water where the Syedoff is drifting moves at a rate of about a mile and a quarter every twenty-four hours northwestward. Thus it is still likely that the Syedoff will beat the Fram's record of being the northernmost ship and possibly the Syedoff will cross the North Pole itself.

The fifteen members of the Syedoff party are having a good deal of fun, besides making regular observations. Nightly they listen to musical programs and political dissertations from Moscow by radio. Occasionally there is a movie show.

Their cabins are warm; they bathe regularly, take long walks on the ice pack and occasionally shoot a polar bear to vary their diet, which, they report, is ample and healthful.

ever gains there have been recently in foreign business with Chile have been registered largely by our German competitors.

But there is one point about the situation from which Americans can draw consolation—Germany's advance has been not so much at the expense of the United States as at that of Great Britain.

In Chile, as in other Latin-American lands, the German drive for trade is based largely on bilateral agreements and on the employment of Aski marks. These, in which the Germans pay for their imports from abroad, are exchangeable only for German goods.

Chileans, like other Latin-American exporters, are forced to take German merchandise in lieu of money when they ship their products to Germany. To make such dealing attractive the Germans sell Aski marks at temptingly low rates.

How Germans Get Orders

But that is not the only reason for their success. In Chile, as in other parts of Latin America, they get the business away from Americans and Britons—especially from the latter—by the method eloquently illustrated by the following anecdote, told me by the head of a mining concern in Santiago, the Chilean capital:

His firm wanted to import a big lot of machinery. They first approached a British machinery company. The Britons quoted a satisfactory price.

"What terms will you grant us?" asked the Chileans.

"Forty-five days."

"Couldn't you give a little more time?"

"Not one day. Sorry."

So the Chileans went to an American concern. There, too, the machinery and price were to their liking.

"What terms?" asked the Chileans.

"Three months."

"Couldn't you make it four?"

"Impossible."

So the Chileans went to a firm of German machinery manufacturers. They quoted most attractive figures. Then came the crucial question:

"What terms?"

"How long do you want?" asked the Germans.

"Well—how about six months?" said the Chileans.

"Pooh! That's not long. Let's make it one year."

The Germans got the order.

That story is typical of what is going on all the time nowadays in Chile and in Brazil and other Latin-American countries.

There is hardly anything that the Germans will not do to book orders down here. Foreign business is to them a matter of life or death; they are utterly unable to understand the rigid conservatism of the British or the casualness of the Americans.

Their methods are winning success—temporarily, anyhow—in markets where the Americans and British are far more strongly entrenched than their German competitors, among which is the important Republic of Chile.

During the first ten months of 1938 Chile imported from the United States merchandise to a total value of nearly 115,000,000 Chilean pesos [a peso is worth from 3 to 4 cents]. In that same period Chilean imports from Germany were worth 107,000,000 pesos, those from Great Britain somewhat over 42,000,000 pesos.

This represented a gain for Germany, compared with the corresponding period of 1937, of nearly 20 per cent, against a gain for the United States of 17 per cent, and one for Great Britain of only 9 per cent.

Turning to imports during the first ten months of 1938 there was a sharp drop in purchases of Chilean products—copper, nitrate, wool, hides, etc.—by all three of Chile's principal foreign customers, compared with the first ten months of 1937. But the Germans succeeded in holding their own better than either Americans or British.

U. S. and British Purchases

Between Jan. 1, and Oct. 31, 1938, the United States bought Chilean products valued at just short of 86,000,000 Chilean pesos—as against 194,000,000 between January and October, 1937—or only 44 per cent of the previous total. In that same ten-month period, British imports from Chile totaled 55 per cent of what they had been for the first ten months of 1937, a better showing than ours.

But the Germans managed to take from Chile merchandise aggregating in value 77 per cent of the total taken by them between January and October, 1937, thus maintaining themselves with far greater success than either Americans or British. Expressed the other way around, American purchases from Chile for the first ten months of 1938, compared with the corresponding period in 1937, dropped 56 per cent, those of Britain 55 per cent, those of Germany only 23 per cent.

The Germans did even better than these figures show, because nitrate exports from Chile are kept secret, and it is well known that, in 1938, Germany took a large part of the Chilean nitrate production.

These large German importations of Chilean nitrates may surprise those who remember that it was Germany who, before and during the World War, nearly ruined Chile's nitrate industry—which had previously been a world monopoly—by inventing and developing the process of making synthetic nitrate. But, despite this invention and its subsequent intensive development by the Germans, synthetic nitrate remains inferior to the Chilean product as a fertilizer for potato crops, and since potatoes are among the principal food staples of Germany, she continues to import Chile's nitrate in large quantities.

Germans are doing particularly well as suppliers of machinery and synthetic organic chemicals to Chile, according to the latest available figures, which cover the situation up to the end of 1937. In the field of machinery exports to Chile, the United States retains an impressive lead, but the Germans are pushing forward with great energy. As for the British, they are slipping badly.

In 1934 we exported machinery to Chile worth 16,000,000 Chilean pesos. In 1936 the value of our exports in this line was nearly 38,000,000 pesos, a gain of 137 per cent. In 1937 we dropped back somewhat from this high mark, but our machinery exports, nevertheless, were still worth 37,500,000 pesos, or 135 per cent of the 1934 figures.

Germany Machinery Gains

German exports to Chile of machinery leaped, meanwhile, from a total value of 5,880,000 pesos in 1934 to 16,775,000 pesos in 1936—a gain of 185 per cent, as against ours of 137 per cene over the same period. In 1937 Germany, like the United States, dropped back a bit, but her exports in this line still totaled in value nearly 16,300,000 pesos, or 176 per cent more than in 1934, as against our gain for the same period of 135 per cent.

During those years Great Britain lagged far behind. In 1934 the total value of the machinery she exported to Chile was worth a little over one-half the value of Germany's exports and only about one-fifth of ours. For 1937 exports of British machinery to Chile slumped still further, representing in value considerably less than one-fifth of those from Germany and less than one-tenth those from the United States.

This makes one wonder whether the spirit typified in the following anecdote may not be partly responsible:

A South American firm placed a large order for machinery with a highly conservative British concern manufacturing machinery, one of those that had been in existence a century. All was moving smoothly until the South Americans asked the Britons to paint the machinery red instead of green. The Britons gasped with horror.

They said frigidly, "Our machines have always been painted green."

"But can't you, for the sake of this big order, paint them red just once?"

"Impossible; our machines have always been painted green."

So the South Americans canceled their order and transferred it to a German firm, which, in its correspondence with those South Americans, clearly implied that if necessary it would paint the stuff in alternate streaks of purple, blue and yellow.

As for Chilean imports of synthetic organic chemicals, Germany has elbowed herself into the lead, though, in a few lines, notably mining chemicals, we are keeping her down in second place. According to the 1937 figures, the latest obtainable, Germany sold Chile synthetic chemicals worth $761,000; our sales totaled $193,000 and Great Britain's $185,000, which means that the Germans sold nearly four times as much as the United States and more than four times as much as the British.

In the sales of some of these chemicals Germany's lead was overwhelming, as, for instance, in dyes and colors, Chile having bought from Germany in 1937 nearly nine-

ders for his firm. He ret[illegible]urned at lunch time in a state of d[illegible] dejection.

"Many Germans aroun[illegible]d?" I inquired.

"Many?" he snorted. "[illegible] Why, man, they're as thick as flie[illegible]!"

This is the fourteent[illegible]h of a series of articles of Mr. Y[illegible] [illegible], who making a tour of Lat[illegible] [illegible] in America.

[...]IDATION LAID [...]RU AT PARLEY

their resentment at this constant surveillance.

Much Spying Amateurish

It is probably true, as many embarrassed Peruvians have tried to explain, that much of the spying and intrigue that went on during the Pan-American Conference was amateurish and done without direct orders from the government. When the government is a military dictatorship, as is the Peruvian, and especially when that dictatorship has a persecution phobia, there are always a large number of men and women who try to curry favor with the authorities by spying and reporting real or imaginary occurrences or conversations to the police.

But as regards the persecution and intimidation of visiting newspaper correspondents this was done by government employes with the personal knowledge of high officials. For two days after the conference was inaugurated the Foreign Office seriously considered deporting this correspondent because of a dispatch printed in THE NEW YORK TIMES exposing the efforts of Nazi and fascist agents to sabotage the conference. The government's sympathies are intensely fascist and the government was furious at the disclosure of German and Italian activities against the Pan-American Conference.

The deportation plans were dropped only when other correspondents convinced the authorities that the deportation of any visiting American correspondent because the Peruvian Government did not like his reporting of the conference would receive spectacular publicity throughout the United States. This seemed to be a great surprise to the members of the Peruvian Government, who maintain a tight and intimidating censorship over all Peruvian newspapers and all resident correspondents.

Agents Provocateur Used

The government used at least two agents provocateur in its campaign to intimidate visiting correspondents, who were more numerous than at any previous Pan-American conference. One of these agents was employed in the press office of the conference itself and the other made his headquarters at the Phoenix Club, an English-speaking social organization that had hospitably extended a visiting membership to all the United States correspondents.

This agent tried on two occasions to persuade your correspondent to visit Victor Haya de la Torre, leader of the Opposition party, who has been in hiding from the persecution of President Oscar Raimundes Benavides for two years. This correspondent declined but the agent eported that the correspondent was trying to see Señor Haya de la Torre. One of the afternoons when Alfred M. Landon and Philip Simms, foreign editor of the Scripps-Howard papers, dropped into the club, this agent provocateur sat down at their table, introduced himself and offered to arrange an interview with Señor Haya de la Torre. Both Mr. Landon and Mr. Simms said they were not interested. Nevertheless the agent reported to Foreign Minister Carlos Concha that Mr. Simms was trying to see the Opposition leader.

Señor Concha immediately protested to the American delegation that several American correspondents were trying to meddle in local politics in violation of their arrangement with the government that if it eliminated the censorship of dispatches concerning the conference the correspondents would not write about local politics. Despite this agreement the government continued to censor all dispatches after they had been sent and kept up continuous complaints against the manner of the correspondents' reporting of the conference.

The censor cut the telephonic communication of Leland Stowe on two occasions while he was dictating his dispatch to The Herald Tribune.

Two Instances Cited

The first occasion was on the day the conference opened, because Mr. Stowe referred to the fact that President Benavides had carefully avoided the use of the word democracy in his opening address. The other occasion was when he made a reference to the Spanish War. The Peruvian censor permits newspapers to report only news favorable to the Franco side in the Spanish conflict.

On Dec. 19 Indalecio Prieto, Loyalist Minister of War, passed through Lima en route to Santiago to represent the Spanish Government at the inauguration of President Pedro Aguirre Cerda. The chief of detectives himself went to the airport with a large squad of detectives and prohibited photographers to take pictures or reporters to approach Señor Prieto. The police permitted Señor Prieto to have lunch in one corner of the airport lunchroom but no one was permitted to converse with him during his short stay in Lima.

On the opening day of the conference Lima appeared to be the site of a great Nazi rally rather than the site of a Pan-American Conference. There were literally thousands of swastika flags all over the city. There were only three American flags on the main street on the opening day and one of them was at the American Consulate. Also there were more Italian and Japanese flags than there were flags of any South American countries. Throughout the conference the government-controlled newspapers used prominent headlines on everything the totalitarian leaders said against the conference.

On Dec. 19 the biggest display of news, next to the conference, was for German editorials accusing the United States of fomenting discord in Europe. The Peruvian delegation led the opposition to Cuba's resolution proposing an offer of mediation in the Spanish war.

Newspaper Editorials Cited

Then Peruvian newspaper editorials in summing up the results of the conference said that the action of the delegates in the vote of 18 to 3 against offering mediation in Spain meant that the American countries were strongly in favor of General Francisco Franco and did not want to do anything to embarrass him.

When the deadlock with Argentina over the phrasing of the solidarity declaration was at its height a functionary of the Foreign Office visited the American news agencies' leading correspondents and said he had been sent by Señor Concha to inform them that Señor Concha, in his capacity as president of the conference and as Minister of Foreign Affairs was highly displeased with the reports reach-

The functionary said that Señor Concha had instructed him to inform the correspondents that there was absolutely no truth in their reports of a difference of opinion between the Argentine and other delegations; that a complete agreement already had been reached and would be signed at any minute. Incidentally, it was not signed until several days later.

Edward Chester, in charge of the correspondents at the conference, sent word to Señor Concha that if he desired to be quoted on such a ridiculous statement he send it as an official statement, otherwise The Associated Press would continue reporting the facts. The chief of the conference's press bureau then again sent for this correspondent and informed him that President Benavides's secretary had gone to the press bureau and reported that President Benavides was highly displeased because THE NEW YORK TIMES correspondents at Lima were sending political

Holiday Buying in Lima

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Jan. 1.—Holiday celebrations in Peru reached a new height this year.

The attendance of delegates from twenty-one countries at the Pan-American Conference added considerable to the spending of the public and there were many official and private receptions and banquets. Money flowed freely this year.

The leading restaurants, clubs, hotels and shops did an enormous trade both at Christmas and New Year but police records show few cases of disorderly conduct or drunkenness.

At 11 o'clock this morning President Oscar R. Benevides, accompanied by members of the Cabinet and of his military household received the traditional New Year greetings from the diplomatic corps, members of the judiciary, representatives of the armed forces and industrial and commercial leaders, at the newly constructed palace.

Incidentally, it was not signed until several days later.

Edward Chester, in charge of the correspondents at the conference, sent word to Señor Concha that if he desired to be quoted on such a ridiculous statement he send it as an official statement, otherwise The Associated Press would continue reporting the facts. The chief of the conference's press bureau then again sent for this correspondent and informed him that President Benavides's secretary had gone to the press bureau and reported that President Benavides was highly displeased because The New York Times correspondents at Lima were sending political news favorable to the Apprista and unfavorable to the Benavides regime.

Charges Described as False

The New York Times had three correspondents at the conference and they did not once touch on local politics. This correspondent set forth this fact and then suggested that the foreign office cable the Peruvian embassy in Washington for clippings of stories that had displeased President Benavides and that when such clippings were received this correspondent would be willing to discuss them. As no such dispatches had ever been written the matter had to be dropped.

Practically all the charges made against the correspondents were false and most of them ridiculous, but this constant watching and accusing by the government served as notice to all correspondents that every move they made was being reported to the authorities. The employes of the conference's press bureau whispered confidentially to the correspondents that so and so was in trouble and was being watched. This obviously was done with the intention that these reports be repeated to the correspondent whom the authorities were trying to intimidate.

Peruvian pressure on the delegates themselves reached its climax the night that Señor Concha gave out to the press the official announcement that a unanimous agreement had been reached and that all the delegations would sign the solidarity declaration that had been presented by Argentina several days before. The Argentine draft had been rejected when presented as a possible basis of negotiations and had not again been taken up with the Argentine delegation.

No Agreement Reached

Later it developed that no such agreement had been reached and several delegates expressed the opinion that Señor Concha's action was designed to force them to sign the solidarity declaration because their failure to sign would embarrass the Peruvian Foreign Office, which had officially announced the agreement. The delegates refused to be stampeded and Señor Concha's statement had to be contradicted.

President Benavides sent word to this correspondent that he wanted to talk with him. When the correspondent called and tried to get the President's impressions of the conference's accomplishments, President Benavides quickly swung the conversation to Peruvian politics and accused this correspondent of having tried to study the internal situation. The writer denied this, saying he had gone to Lima only to report the conference's proceedings and was not at this time interested in studying conditions.

President Benavides intimated that this was untrue and said accusingly:

"I know all about your activities in Chile two years ago. You were very much interested in Peruvian politics at that time."

Evidently he was referring to this correspondent's attendance at the Pan-American Conference of Journalists, where he introduced a resolution that was unanimously adopted condemning censorship.

The facts here set forth have been reported to several Latin-American governments by their delegations. They could not be reported from Lima because of the strict censorship there. Arica is the first uncensored cable available to this correspondent since leaving Lima.

Eighth Pan-American Conference Functioned Under the Dictatorial Benavides Regime of Censorship, Intimidation and Espionage

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

ARICA, Chile, Jan. 1.—The eighth Pan-American conference which last week finished its sessions in Lima, functioned under a dictatorial regime of censorship, intimidation and spying such as never before seen in any Pan-American assembly.

The Peruvian Government not only tried to control the newspaper correspondents, it censored and spied on the delegates and tried, at least on one occasion, to force them to follow the line of action Peru wanted followed. This intrigue reached its climax one night when secret service men were found searching the offices of the American delegation. The delegates had gone to a banquet and the offices were deserted. Two members of the American secretarial staff, seeking the draft of a document that had to be prepared for the next day, surprised two Peruvian detectives searching the files and desks in the office of Green H. Hackworth and Dr. Ben M. Cherrington on the sixth floor of the Hotel Bolivar.

After that members of the American delegation took all their important papers to their living quarters at night. Throughout the three weeks that the conference was in session a censor maintained an office on the second floor of the Hotel Bolivar, where most of the delegations were housed. The delivery of important ail mail from all American countries was delayed five or six hours while the censors examined and checked it and decided whether or not it appeared to warrant reading.

At previous Pan-American Conferences, notably at Montevideo, newspaper men worked under censorship, but this was believed to be the first time that the government acting as host to all American republics violated diplomatic immunity and examined the delegates' mail.

Many chauffeurs of automobiles assigned to the delegates were known to be in the employ of the secret police with instructions to keep their ears open for snatches of conversation. There were from two to five Mestizo detectives in the entry hall of the Hotel Bolivar day and night and the delegates could not come or go without passing in review. Many Latin-American delegates openly expressed

HULL THINKS LIMA AIDED U. S. PRESTIGE

Says Approval of His General Policy by American Nations Strengthens Our Hand

FORESEES FREER TRADE

Secretary, Returning Today, Is Expected to Oppose Ludlow and McCarran Bills

ABOARD S. S. SANTA MARIA, Jan. 8 (AP).—Secretary of State Cordell Hull, on the eve of his arrival in New York from Lima, Peru, today believed the United States would face imminent world problems with greater authority because of the approval given by the twenty other American republics to the general lines of his foreign policy at the eighth Pan-American Conference.

Mr. Hull, with other members of the United States delegation, will reach New York tomorrow afternoon. He will go directly to Washington, which he left Nov. 25 for the Lima conference held Dec. 9 to 27.

The Secretary, tanned by the Southern sun and rested by the return trip, was expected to report to President Roosevelt on the results of the conference soon after his arrival in the capital.

He also will begin preparation of an important public address, to be made after some weeks, in which he will place the Lima parley in full relief against the general background of the world situation.

Returning to Washington at a time when the United States' troubles with totalitarian States seem on the increase, Mr. Hull believed the Pan-American Conference would aid him in two directions.

Sees Democracies Heartened

In conversations today and during the homeward trip, he stated them as follows:

1. With the approval formally given by the twenty other American republics to the eight fundamental points of foreign policy he had laid down in previous speeches, he will be able to speak with added weight to the totalitarian States.
2. The same approval will strengthen the attitude of the large European democracies—Great Britain and France—and the smaller nations such as Belgium, The Netherlands and the Scandinavian countries and induce them to continue along the same lines of international conduct, which briefly means the rule of order under law rather than rule of force or threat of force.

Mr. Hull is satisfied that the Lima conference will have far-reaching effects. He summed these up as follows:

1. The declaration on continental

THIS PAGE IS DECLASSIFIED IAW EO 13526

Mr. Hull, with other members of the United States delegation, will reach New York tomorrow afternoon. He will go directly to Washington, which he left Nov. 25 for the Lima conference held Dec. 9 to 27.

The Secretary, tanned by the Southern sun and rested by the return trip, was expected to report to President Roosevelt on the results of the conference soon after his arrival in the capital.

He also will begin preparation of an important public address, to be made after some weeks, in which he will place the Lima parley in full relief against the general background of the world situation.

Returning to Washington at a time when the United States' troubles with totalitarian States seem on the increase, Mr. Hull believed the Pan-American Conference would aid him in two directions.

Sees Democracies Heartened

In conversations today and during the homeward trip, he stated them as follows:

1. With the approval formally given by the twenty other American republics to the eight fundamental points of foreign policy he had laid down in previous speeches, he will be able to speak with added weight to the totalitarian States.
2. The same approval will strengthen the attitude of the large European democracies—Great Britain and France—and the smaller nations such as Belgium. The Netherlands and the Scandinavian countries and induce them to continue along the same lines of international conduct, which briefly means the rule of order under law rather than rule of force or threat of force.

Mr. Hull is satisfied that the Lima conference will have far-reaching effects. He summed these up as follows:

1. The daclaration on continental solidarity and defense, which he maintains is far stronger than decisions reached at any previous Pan-American Conference, should bind the nations of the Western Hemisphere closer together and also serve as a warning to totalitrian States in the Eastern Hemisphere.
2. The same declaration also should make the American republics more cognizant of danger of political penetration from totalitarian States and more disposed to take measures to protect themselves.
3. The declaration based on his program for a world order founded on law should keep the American republics moving along the right lines and, at the same time, prove a powerful example to other nations to adopt the same principles.
4. The extensive declaration for reduction of trade barriars and removal of commercial restrictions should tend to make trade move more freely among the nations adhering to liberal principles in commerce in contradisdiction to nations using barter methods and artificial systems.
5. The American republics, realizing the world is becoming ever smaller through improved communications, will be disposed to work with the rest of the world in an effort to bring stability rather than to place themselves upon a shining but isolated plateau.

Expects Busy Period

The Secretary is looking forward to a busy period after his return to Washington.

In addition to tackling German and Japanese problems he probably will throw his influence against several issues before Congress.

These include the bill by Senator Bennett Champ Clark and Representative Louis Ludlow for a popular referendum before a declaration of war, to which he is opposed as tying the government's hands, and the bill by Senator Pat McCarran requiring the Senate's consent for trade agreements. He believes the McCarran measure would revive the system of log-rolling for tariff increases in place of the trade agreement system of reductions by experts.

He also faces long and involved discussion of the new neutrality bill.

During the return voyage, State Department officials and delegates have completed reports on special subjects which Warren Kelchner, executive secretary of the delegation, will work into a general report to be published by the State Department.

Secretary of State Cordell Hull declared on his return from the Lima conference yesterday that the American nations had served notice on the world that they were prepared not only to defend their peace but stood ready to sponsor liberal policies of trade as the only means of alleviating recognized economic chaos and providing for "a peaceful trading world."

Returning on the Grace liner Santa Maria with this country's plenipotentiaries to the eighth Pan-American Conference, the Secretary set forth his conception of the Lima achievements in a long, carefully worded statement, amplified briefly by a press interview in the ship's lounge.

This discussion was abruptly terminated when the Secretary became angered by questions about reported spying and censorship in the Peru capital during the meeting.

He turned on his interviewers with the retort: "I don't go smelling around for little objects of criticism."

With considerable emphasis, he said he had no intention of permitting the valuable and significant features of the international gathering to "degenerate" into "a little, sensational squabble."

"Disappointed" With Press

If the reporters had nothing "more important" on their minds, he said, he would have to be excused from further conversation. "I am disappointed," he declared.

He then turned away and joined some friends who had been listening on the edge of the group. The interview was ended.

Mr. Hull said that he had at no time been "worried" as to the outcome of the conference, even during the days when reports to the United States painted the picture as plainly discouraging. The conference procedure, he explained, followed true American democratic methods of discussion that were no different from those of previous conferences.

The result, as he set forth in his prepared statement, was "a charter for international conduct" and "significant and enduring developments" the profound effects of which will be more apparent as time goes on.

The Secretary declined to give a direct answer to the question concerning spying, censorship and the reported search of the personal effects of some of the delegates.

"We had no trouble from any angle," he repeated. "We were never better entertained or re-

PROGRESS AT LIMA HAILED BY WOMEN

Doris Stevens Reports 90% of Their Program Achieved at the Conference

NEW SUFFRAGE GAINS SEEN

Other Delegates Encouraged by Principles Supported at Pan-American Session

The interests of women in the Western Hemisphere were well served by the Pan American Conference at Lima, according to Miss Doris Stevens, head of the Inter-American Commission of Women, who returned from Peru yesterday on the Grace liner Santa Maria.

Miss Stevens said the commission had "come off extremely well" and had achieved 90 per cent of its program on the agenda for this year.

"I think that is a very good record," she added. "At the present time, in territory embracing 80 per cent of the population represented at the conference, women now have equal political rights with men, and we endeavored at the conference to get a strong measure in behalf of the remaining 20 per cent.

Complete Suffrage Inevitable

"We stressed that complete suffrage is an inevitable consequence, and we pointed out that in Argentina, in domestic elections, the candidates are now promising equal rights for women.

"When the question becomes a political issue, then it is only a matter of time. We are well pleased with our progress in recent years. Only ten years ago such rights existed only in the United States, Mexico and Ecuador, and today proposals for equal rights are before the people of every American nation with the exception of Haiti."

The Ineer-American Commisison was placed on a permanent basis at Lima, the third conference after its temporary organization. It was founded at the Havana conference and continued at Montevideo last year.

When Miss Stevens predicted that women would vote in Peru in the near future, she was asked if their votes would be counted.

"I can say that they will have a vote, but that is as far as I can go," she replied. "It is a well-known fact that they are not counting votes in Peru since last year."

Miss Stevens submitted to the conference the report of the commission on "the civil and political rights of women," recommending that women in all the twenty-one nations receive full voting rights and the right of election to office. The full conference then adopted a resolution in support of political treatment and civil rights equal to those granted to men.

Miss Lewis Praises Hull

Miss Kathryn Lewis, daughter of John L. Lewis of the C. I. O. and his executive assistant, who was a delegate to the conference, praised Secretary Hull and said she thought

Text of Hull's Prepared State

The text of the statement of Secretary Cordell Hull upon his return from the Eighth International Conference of American States at Lima, Peru, follows:

It would not be possible in a short statement to make adequate comment upon the work of the Eighth International Conference of American States. I believe that I can report to you, however, that significant and enduring developments in the relationships of the American republics took place at Lima. The delegates attending the conference were virtually as one in the view that the conference was an outstanding success and that it set an example for the conduct of international relations by friendly discussion rather than by force and violence.

All of the delegates at Lima with whom I had contact were vividly aware of the economic chaos existing in considerable parts of the world. They realized that this chaos would eventually involve their own countries unless preventive measures were taken. Accordingly, the American republics reaffirmed their judgment that a liberal trade policy without excessive restrictions and permitting trade to move along lines of economic advantage and equality was the soundest policy for all, and they renewed their support of this policy.

This action was taken in the knowledge that trade arrangements of other kinds in the long run weaken the position of primary producers, curtail world markets, lessen economic benefit and may under some circumstances be used as an instrument of political influence or domination. It was recognized too that this liberal policy was the only one proper to a peaceful trading world, rather than one of competing and force-using alliances.

By carrying forward this policy with determination the American republics were seeking not only to suit their economic advantage but also to safeguard their equality and independence. In so doing, they made it clear that they are ready to cooperate with all nations of the world which care to participate in that program.

The Declaration of Principles

The Declaration of Principles of the Solidarity of America in part constituting a large expansion of the Buenos Aires consultative pact, and the implementation of the procedure of consultation, represent great progress beyond the agreements adopted at former inter-American conferences.

The American Republics have made it clear to the world that they stand united to maintain and defend the peace of this hemisphere, their territorial integrity, their principles of international relations, their own institutions and national policies. The Declaration of the Conference favored the solidarity of America in the protection of its peace and institutions against threats of force or of acts of any nature that might threaten that peace or

By these principles the conference sought to make it clear that the nations of the New World do not seek to isolate themselves from the rest of the world, but that they do strongly advocate and support sound and fundamental principles of international relations that can be universally applied.

If the public opinion of the world can be rallied to these principles, the American Republics will have made a most valuable contribution to a system of international relations based upon respect for the rights of all nations and of all individuals, regardless of race and religion.

The United States, in accordance with our traditional policy,

by the study given to and plans made for a broad interchange in educational, professional and scientific fields. The basis for genuine understanding among the peoples of the American republics has been extended and reinforced.

The government of Peru, which acted as hosts to the conference, is to be congratulated upon the accomplishments of the conference. The officials of the Peruvian Government who were charged with the arrangements for the conference displayed statesmanship, efficiency and tact. The hospitality and courtesy shown to all of the delegations and to the many other foreign visitors who were present in Lima during the conference deserve the approbation and thanks of all of us.

Those who followed the proceedings of the conference will agree, I believe, that our delegates gave every evidence that in the fundamentals of inter-American relations there is unity of purpose on the part of the people of the United States regardless of political or other affiliations of a domestic character. That fact greatly increased the effectiveness of the

REPORT OF SPYING DENIED BY BERLE

Hull Aide Says U. S. Delegates Had No Knowledge of Any Search of Their Papers

NO 'SECRET DIPLOMACY'

All Dealings Were in the Open, He Declares—Calls Parley Brilliant Success

The American delegation to the Eighth Pan-American conference at Lima, Peru, had no knowledge of spying on the delegation or of a search having been made of the papers of United States delegates, it was declared last night by Adolf A. Berle Jr., Assistant Secretary of State and one of the delegates to the conference.

Mr. Berle spoke over the radio in a National Broadcasting Company hook-up. Although he mentioned no publication, his remarks referred to a story by John W. White, South American correspondent of THE NEW YORK TIMES, and printed in THE TIMES of Jan. 2.

TEXT OF BERLE'S ADDRESS

The text of his address follows:

I have been asked to comment on reports which we find here that Peruvian officials searched the files of the American delegation at the Lima conference, and that in other ways they spied upon the delegation.

The facts may be disappointing to people who like sensation, but that cannot be helped.

We heard nothing of any spying on the American delegation or of the searching of the delegations papers during the whole stay at Lima. We found the Peruvian Government perfect and courteous hosts. They worked side by side with us at the conference. No one could have been fairer or more considerate. We not only had no complaints to make, but left with the warmest feelings of friendship and gratitude toward a country which has been historically a friend of the United States.

When we were half way home a question was wirelessed to the ship about stories of spy activities conducted by the Peruvian Government against us at Lima. This was the first we had heard about it. Some of the men whose papers were supposed to have been searched were on board the boat. They knew nothing about it either. It is bad to spoil a good story, but I am afraid this one has to be spoiled. I speak, of course, only for the delegation because the newspaper men are quite able to speak for themselves.

Says Frankness Prevailed

This gives me an opportunity to say something else which per-

those institutions.

The agreement upon the declaration was reached in true American fashion by the democratic processes of discussion and conference. As a sorollary to the principles on which the declaration of solidarity is based, and as an evidence of their determination not to tolerate subversive activities of aliens in the American hemisphere, the conference adopted a resolution and a declaration of these subjects.

Outstanding at the conference did not desire or intend to seek political or military alliances at the Lima Conference. It did hope that the American republics would continue to strengthen their cooperation in support of an inter-American and world program that will bring peace, economic welfare and a recognition of human rights. That hope was fully realized.

Basis for Understanding

This broad program was further strengthened and advanced

work of our delegat

the American foreign policy had been greatly strengthened.

As for labor, Miss Lewis said very little was accomplished.

"I think it is necessary that labor representation be extended, particularly from other American countries," she said. "Only Mexico and the United States had labor representation at Lima."

Miss Estelle M. Sternberger, executive director of World Peaceways, who also returned on the Santa Maria's issues a statement in which she declared that Latin American countries needed "a greater sense of self-confidence."

"In the past," she said, "their reliance on foreign capital and foreign industrialists kept their initiative submerged. As they now attempt to alter that situation they frequently go to extremes. I should like to see them retain the partnership of our American industrialists until they become more competent at running a big industrial machine.

"One of the greatest blows we suffered was the practical repudiation of their war debts to the United States on the part of the European governments. That set a dangerous example. The Latin republics have come to imagine that we are capable of absorbing tremendous financial losses. This determination to overcome a sense of inferiority has made the leaders afraid. That is the only explanation I can advance for their dictatorships."

Protective Laws Favored

Protective legislative was included in the recommendations for the extension of women's rights made at Lima at the insistence of several Latin-American countries as well as that of the delegation of the United States, Mrs. Burton W. Musser said, on landing from the Santa Maria.

Mrs. Musser was a delegate to the conference, as she was to the Conference for the Maintenance of Peace held at Buenos Aires in 1936; and at both gatherings she served on the committee dealing with the civil and political rights of women.

The theory that women's advancement will be hastened by legislation according to women civil and political equality with men without protective safeguards for women's special problems has not made much headway in Latin America, Mrs. Musser said. Even in those countries with the most advanced codes on women's rights, protective laws have been retained and others are being enacted, she remarked.

The difference between the two schools of thought, which has divided the feminist movement since the early suffrage campaigns in Great Britain and the United States, is much less than it used to be in this country, Mrs. Musser said.

Although little headway has been made toward passage of the proposed constitutional amendment guaranteeing women against discrimination because of sex, Federal and State laws are gradually adapting themselves to this standard, in her opinion.

At the Pan American Conference, however, the American delegate found that most women's organizations from the Latin American countries wanted the conference to recommend protective legislation as well as woman suffrage to the member republics. The following declaration was unanimously adopted by the conference:

"The Eighth International Conference of American States agrees:

To declare that women have the right: To political treatment on the basis of equality with men, to the enjoyment of equality as to civil status, to full protection in and opportunity for work, to the most ample protection as mothers.

"To urge the government of the American republics, which have not already done so, to adopt as soon as possible the necessary legislation to carry out fully the principles contained in this declaration, which shall be known as 'The Lima Declaration in Favor of Women's Rights.'"

The only other point in connection with women's rights that aroused any considerable controversy, according to Mrs. Musser, was the question of continuing the Inter American Commission of Women, established by the Sixth Pan American Conference at Havana in 1928 and prolonged for five years by the Seventh Conference at Montevideo.

The United States favored its continuance against the

HULL, HOME, VEXED BY PRESS QUESTIONS

Continued From Page One

ceived so many courtesies, official and private, as in Lima. I do not think the principles established or the results anticipated have been excelled at any conference of American republics."

When another questioner asked about censorship, Mr. Hull replied that "the best evidence of the capacity of the conference to function is the fact that I have just stated. If it functioned that well, I don't think we have to worry about minor phases."

He added that he had heard no complaints from the correspondents covering the conference.

Mr. Hull was asked if he felt that the American delegates had taken relatively unassuming roles at the conference, deliberately avoiding a position of strong leadership. He replied that each country got "the substance" of what it sought, and even more, and that if the high achievements of the meeting had "happened without leadership," then he was satisfied.

When he joined the newspaper group in the lounge, Mr. Hull remarked that he was pleased to be at home, but that he was equally pleased when he was away from the United States, if he was "being of some service" to the nation. Then he suggested that the prepared statement being distributed by Michael J. McDermott, chief of the bureau of current information, contained all he wished to say. A reporter, asking for more information, called the statement "a hand-out," and Mr. Hull bridled, declaring that the statement had been prepared with considerable thought and was not subject to "discredit."

A significant feature of the statement was the fact that the heading designated the Lima meetings as "the Eighth International Conference of American States."

Apart from the exposition of the achievements at Lima, it praised the Government of Peru for its hospitality and the "efficiency and tact" with which the conference affairs had been conducted.

The delegates at the conference realized, Mr. Hull said, that "international lawlessness and international anarchy exist in many areas of the earth," and that the only cure was acceptance of a system "of law and order based ultimately on international justice and good faith." The nations of the New World, he added, have no desire to isolate themselves from the rest of the world, but to advocate principles of international relations that may be "universally applied."

Mr. Hull remained on the liner with Mrs. Hull for nearly an hour after the ship had docked at West Fifteenth Street. Then, accompanied by representatives of the State Department and detectives, they went by limousine to the Pennsylvania Station, where two special cars, a diner and a pullman parlor car, had been attached to the Florida special, the Orange Blossom, which pulled out at 1:27 P. M.

A few spectators, attracted by the uniformed policemen walking alongside, watched the Secretary and his party board the train. Before it departed Mr. Hull sent an attaché to purchase an armful of newspapers from a station newsstand.

Delegates Speak With Caution

Others on the ship, whether official delegates or unofficial members of the party, spoke with extreme caution of the various sub-currents of the conference, or reported censorship and telephone conversations unaccountably broken off.

In deference to Mr. Hull's leadership, they left public comment to him in most cases, but several said they felt that the reports of embarrassing incidents were highly exaggerated.

Adolf A. Berle Jr., Assistant Secretary of State, denied in a radio broadcast that the United States delegates to the Pan-American Conference had been spied upon or their papers searched.

Green H. Hackworth, legal adviser to the Department of State, whose baggage had been reported rifled, said that he knew nothing of the incident until he received some American newspapers on the way home.

Miss Kathryn Lewis, daughter of John L. Lewis, C. I. O. president, and his executive assistant, discussed the labor aspects of the conference, to which she was an accredited delegate, but she referred all other questions to Mr. Hull.

Dan W. Tracy, president of the International Brotherhood of Electrical Workers, said he could not confirm reports of espionage, that he had had no experience and had heard of none until he was on board the Santa Marie. Mr. Tracy made an incidental study of labor conditions in Lima, where he found a greater degree of cooperation among the workers than he had expected. Although w

ne of the greatest blows we suf- d was the practical repudiation heir war debts to the United es on the part of the European rnments. That set a dangerous mple. The Latin republics have e to imagine that we are capa- of absorbing tremendous finan- losses. This determination to come a sense of inferiority has e the leaders afraid. That is only explanation I can advance their dictatorships."

Protective Laws Favored

otective legislative was includ- n the recommendations for the nsion of women's rights made ima at the insistence of several in-American countries as well as of the delegation of the United es, Mrs. Burton W. Musser , on landing from the Santa ia.
rs. Musser was a delegate to conference, as she was to the Conference for the Maintenance of Peace held at Buenos Aires in 1936, and at both gatherings she served on the committee dealing with the civil and political rights of women.

The theory that women's advancement will be hastened by legislation according to women civil and political equality with men without protective safeguards for women's special problems has not made much headway in Latin America, Mrs. Musser said. Even in those countries with the most advanced codes on women's rights, protective laws have been retained and others are being enacted, she remarked.

The difference between the two schools of thought, which has divided the feminist movement since the early suffrage campaigns in Great Britain and the United States, is much less than it used to be in this country, Mrs. Musser said.

Although little headway has been made toward passage of the proposed constitutional amendment guaranteeing women against discrimination because of sex, Federal and State laws are gradually adapting themselves to this standard, in her opinion.

At the Pan American Conference, however, the American delegate found that most women's organizations from the Latin American countries wanted the conference to recommend protective legislation as well as woman suffrage to the member republics. The following declaration was unanimously adopted by the conference:

"The Eighth International Conference of American States agrees:

To declare that women have the right: To political treatment on the basis of equality with men, to the enjoyment of equality as to civil status, to full protection in and opportunity for work, to the most ample protection as mothers.

"To urge the government of the American republics, which have not already done so, to adopt as soon as possible the necessary legislation to carry out fully the principles contained in this declaration, which shall be known as 'The Lima Declaration in Favor of Women's Rights.'"

The only other point in connection with women's rights that aroused any considerable controversy, according to Mrs. Musser, was the question of continuing the Inter American Commission of Women, established by the Sixth Pan American Conference at Havana in 1928 and prolonged for five years by the Seventh Conference at Montevideo.

The United States favored its continuance against the opposition of some Latin-American delegations, Mrs. Musser said, paying tribute to the work it has done under the chairmanship of Miss Stevens in its ten years of existence.

"We felt the commission should be placed on a stabler basis," Mrs. Musser declared. "We wanted its continued existence and the cooperative help of the various governments assured to it and its work. For this reason, we favored inclusion of a strong recommendation to all governments which have not appointed members of the commission to do so immediately, so that it could function at full strength.

"Women's organizations active in international affairs and world peace will undoubtedly urge the immediate appointment of the United States member. If all of the members of the Pan-American Union carry out this recommendation, it should result in having a commission composed, for the first time, of women serving in an official capacity.

"In this way the work of the commission, its reports and its recommendations would carry greater weight with the home governments which must, in final analysis, put them into effect if the commission's labors are to bear fruit."

---

those institutions.

The agreement upon the declaration was reached in true American fashion by the democratic processes of discussion and conference. As a sorollary to the principles on which the declaration of solidarity is based, and as an evidence of their determination not to tolerate subversive activities of aliens in the American hemisphere, the conference adopted a resolution and a declaration of these subjects.

Outstanding at the conference did not desire or intend to seek political or military alliances at the Lima Conference. It did hope that the American republics would continue to strengthen their cooperation in support of an inter-American and world program that will bring peace, economic welfare and a recognition of human rights. That hope was fully realized.

Basis for Understanding

This broad program was further strengthened and advanced work of our delegation.

I return from the conference with the conviction that its results will be of real and permanent value and that as time goes on the far-reaching effects of the principles there enunciated will become more apparent and significant. Those principles offer a charter for international conduct, based upon equality, justice and freedom—the indispensable foundation of peaceful and friendly relations among the nations of the world.

haps may be of interest. Stories of spy activities really have no place in inter-American conferences. These conferences do not indulge in secret diplomacy. The good American tradition of open covenants openly arrived at is a part of the very essence of Pan American conference work. Practically everything of importance is known to every delegation at the conference and in consequence to the general public. The work of the conference, indeed, consists in large measure of letting everybody know the positions taken. The custom of frank dealings is general.

It always is a trifle unhappy to find that as unimportant a trifle as this kind of story has occupied any particular amount of attention of the American public. The Lima Conference was dealing with big questions. It was trying to carry forward and work out a charter for the New World both in its internal economics and in its foreign relations.

Policies of Pan-Americanism

Especially it was declaring that the principles of Pan-Americanism exclude persecutions based on race or religion; that they exclude undul yhigh trade barriers; that they assume that every one in the continent would maintain and defend the New World against any threat of force or other activity from outside the continent; and it was declaring for certain American principles under which international law should govern relations of nations and any brute force.

These are the kind of principles which will make the New World safe for our children and our children's children. They are the kind of principles which make it possible for us to know that on this hemisphere we are always dealing with friends and need never fear enemies. This was what the Lima Conference stood for.

To obscure that achievement and the very great ideals which the twenty-one governments there assembled unanimously agreed to accept by minor stories of activities which were not important enough even to be reported to us while were were down there, shows lack of proportion.

I hope therefore that in thinking of the Lima conference no one gets the idea that it was a story-book contest. As far as I could see the Government of Peru which was our host and all the other governments which were guests sincerely and wholeheartedly worked day and night to that end. The result, which was brilliant, speaks for itself.

ved so many courtesies, official d private, as in Lima. I do not nk the principles established or e results anticipated have been celled at any conference of Amer- n republics."
When another questioner asked out censorship, Mr. Hull replied at "the best evidence of the pacity of the conference to func- n is the fact that I have just ted. If it functioned that well, don't think we have to worry out minor phases."
He added that he had heard no mplaints from the correspondents ering the conference.
. Hull was asked if he felt that American delegates had taken atively unassuming roles at the nference, deliberately avoiding a sition of strong leadership. He re- ied that each country got "the bstance" of what it sought, and en more, and that if the high hievements of the meeting had appened without leadership," en he was satisfied.
When he joined the newspaper oup in the lounge, Mr. Hull re- arked that he was pleased to be home, but that he was equally eased when he was away from the nited States, if he was "being of me service" to the nation. Then e suggested that the prepared atement being distributed by ichael J. McDermott, chief of the reau of current information, contained all he wished to say. A reporter, asking for more information, called the statement "a handout," and Mr. Hull bridled, declaring that the statement had been prepared with considerable thought and was not subject to "discredit."

A significant feature of the statement was the fact that the heading designated the Lima meetings as "the Eighth International Conference of American States."

Apart from the exposition of the achievements at Lima, it praised the Government of Peru for its hospitality and the "efficiency and tact" with which the conference affairs had been conducted.

The delegates at the conference realized, Mr. Hull said, that "international lawlessness and international anarchy exist in many areas of the earth," and that the only cure was acceptance of a system "of law and order based ultimately on international justice and good faith." The nations of the New World, he added, have no desire to isolate themselves from the rest of the world, but to advocate principles of international relations that may be "universally applied."

Mr. Hull remained on the liner with Mrs. Hull for nearly an hour after the ship had docked at West Fifteenth Street. Then, accompanied by representatives of the State Department and detectives, they went by limousine to the Pennsylvania Station, where two special cars, a diner and a pullman parlor car, had been attached to the Florida special, the Orange Blossom, which pulled out at 1:27 P. M.

A few spectators, attracted by the uniformed policemen walking alongside, watched the Secretary and his party board the train. Before it departed Mr. Hull sent an attaché to purchase an armful of newspapers from a station newsstand.

Delegates Speak With Caution

Others on the ship, whether official delegates or unofficial members of the party, spoke with extreme caution of the various sub-currents of the conference, or reported censorship and telephone conversations unaccountably broken off.

In deference to Mr. Hull's leadership, they left public comment to him in most cases, but several said they felt that the reports of embarrassing incidents were highly exaggerated.

Adolf A. Berle Jr., Assistant Secretary of State, denied in a radio broadcast that the United States delegates to the Pan-American Conference had been spied upon or their papers searched.

Green H. Hackworth, legal adviser to the Department of State, whose baggage had been reported rifled, said that he knew nothing of the incident until he received some American newspapers on the way home.

Miss Kathryn Lewis, daughter of John L. Lewis, C. I. O. president, and his executive assistant, discussed the labor aspects of the conference, to which she was an accredited delegate, but she referred all other questions to Mr. Hull.

Dan W. Tracy, president of the International Brotherhood of Electrical Workers, said he could not confirm reports of espionage, that he had had no experience and had heard of none until he was on board the Santa Marie. Mr. Tracy made an incidental study of labor conditions in Lima, where he found a greater degree of cooperation among the workers than he had expected. Although wages and hours in Peru were "terribly bad" he was amazed to find no unemployment.

He will make a complete report on the conference to William Green, president of the American Federation of Labor.

Several passengers, none of whom would be quoted, declared that some of the American observers had been puzzled by conditions that are best understood by veteran observers in South America.

"There were many disconnected telephone conversations, that is true," said one. "But I believe it is a serious mistake to attribute them to eavesdropping. A more likely answer is that the telephone service in South America is not what it is in the United States. And to a certain extent of censorship in a country where censorship has been openly in effect for some time is not so strange."

To See President Tomorrow

WASHINGTON, Jan. 9 (AP).—Secretary Hull returned to Washington late today and said he probably would confer with President Roosevelt tomorrow. He declined any further comment upon the Lima conference.

As he stepped from the train the Secretary was greeted by a group of State Department officials and diplimats. They included Sumner Welles, Under-Secretary of State; Ellis Briggs, acting chief of the Division of American Republics; Norman Davis, head of the American Red Cross and President Roosevelt's Ambassador at Large; Captain Colon Eloy Alfaro, the Ecuadorean Ambassador, and J. Richling, Minister from Uruguay.

AUSTRALIA HAS DROUGHT

Thirty Feared Dead in Forest Fires—Heat at 23-Year High

MELBOURNE, Australia, Jan. 9 (AP).—Bush fires started during a heat wave raged throughout much of Victoria State today with at least thirty persons missing and feared dead.

Two forestry officers were burned to death at Toolangi. Many houses and valuable stocks of timber were destroyed. Damage was estimated at nearly $250,000 at the seaside resort of Dromana, forty miles from Melbourne. Forty-four houses were destroyed there.

Melbourne is experiencing the worst drought in twenty-six years and the hottest weather in twenty-three years, with the thermometer registering up to 109.6 degrees. Elsewhere in the State the temperature varied from 100 to 116 degrees.

U.S. PRESTIGE NEARS NEW LOW IN MEXICO

Trade Falls to Half the Level of Year Ago—Barter Deals Threaten It Further

ECONOMIC CONDITIONS BAD

Cardenas Hampered by Lack of Money—Workers Seen Under Government's Domination

By FRANK L. KLUCKHOHN

Special to THE NEW YORK TIMES.

BROWNSVILLE, Texas, Jan. 19.—At a moment when European dictatorships, with Nazi Germany in the vanguard, seek aggressively to extend their commercial and political strength in Latin America, the prestige of the United States in Mexico has fallen close to the lowest ebb in the twenty-eight years since Francisco Madero began the Mexican revolution.

During the last two years, United States investments in many fields, and valued at hundreds of millions of dollars, have been expropriated or dissolved by the Mexican Government. With the loss of investments, the trade of the United States has fallen to less than half the level of a year ago, and Mexican barter deals with the world's three great dictatorships threaten it further.

That the prestige of the United States is now waning fast in Mexico is indicated by a large number of incidents, including Mexico's naming of a Minister to Germany for the first time since 1937 at the moment when the United States is showing its displeasure at Nazi punitive action by the Mexican Government.

They are reported here with no desire to embarrass Secretary of State Cordell Hull, who has sincerely endeavored, in the opinion even of many whose interests are affected, to endeavor through lawful international means to seek a just solution of the perplexing situation.

He has been forced to take into consideration the fact that President Lazaro Cardenas is trying to raise the level of the Mexican poor and he has behind him the experience of various Secretaries of State and Presidents, who, in seeking to protect just American interests found themselves involved in a political issue at home with liberals and others splitting sharply over policies.

Although Mexican policy has its humanitarian aspects, it also is intensely nationalistic, as President Cardenas's official slogan, "Mexico for Mexicans," demonstrates. Rather than reciprocate for the cooperation of the United States, such as in the purchase of silver, Mexican policy, in operation, has been to take all possible advantages of the various Pan-American treaties to force the United States into the position either of using strong-arm methods, against which it has declared, or else failing effectively to protect the interests of its government and citizens.

Increase in Tariffs Cited

The United States, for instance, has a very low duty upon Mexican cattle on which large sales are made in the United tSates. Yet, in the face of Secretary Hull's trade program, President Cardenas published a decree in January, 1938, increasing tariffs from 100 to 400 per cent on the general tariff list. He only lowered these tariffs months later, after it was clear that barter deals with European dictatorships were in the making. The government at present is obtaining taxes running to about 20 per cent of gross production on silver sold to the United States Treasury.

It is a matter of record that, time after time, when the State Department was treating a subject amicably in Washington with the Mexican Ambassador, Dr. Francisco Castillo Najera, some new and more drastic legislation in Mexico City

NEW LOW IN MEXICO

Trade Falls to Half the Level of Year Ago—Barter Deals Threaten It Further

ECONOMIC CONDITIONS BAD

Cardenas Hampered by Lack of Money—Workers Seen Under Government's Domination

By FRANK L. KLUCKHOHN

Special to THE NEW YORK TIMES.

BROWNSVILLE, Texas, Jan. 19.—At a moment when European dictatorships, with Nazi Germany in the vanguard, seek aggressively to extend their commercial and political strength in Latin America, the prestige of the United States in Mexico has fallen close to the lowest ebb in the twenty-eight years since Francisco Madero began the Mexican revolution.

During the last two years, United States investments in many fields, and valued at hundreds of millions of dollars, have been expropriated or dissolved by the Mexican Government. With the loss of investments, the trade of the United States has fallen to less than half the level of a year ago, and Mexican barter deals with the world's three great dictatorships threaten it further.

That the prestige of the United States is now waning fast in Mexico is indicated by a large number of incidents, including Mexico's naming of a Minister to Germany for the first time since 1937 at the moment when the United States is showing its displeasure at Nazi policies and pleading for "continental solidarity."

Systematic Campaign Seen

While general attention has been called to the expropriation of British and American oil properties, their case is only the most dramatic part of what appears to be a systematic campaign against American interests and investments in Mexico.

Railroads in which foreign interests were large recently were expropriated and mines have been abandoned, but perhaps the most serious fact of all is that American salesmen are being forced to leave Mexico through lack of business and for other reasons. American business men complain that lately heavy taxes have been levied and that a large percentage of the strikes are not economic "but political movements with a purpose," namely sabotage. American airline subsidiaries, ading in the developing of Mexico, are being run only by growing subsidies.

This is the problem that the United States Government faces with regard to Mexico. With barter deals tending to "shut the door," to United States trade, American business men and salesmen, in no way connected with what the Mexican Government terms "exploiting" industries, complain bitterly that the United States Government does not aid them in any effective way in getting "a fair deal."

The magazine of one of the largest American business associations in Mexico is now edited by the Mexican Government and members are afraid to make public complaints.

The home of Miss Roberta Duncan, American consular employe in Mexico City and a United States citizen, has been shot at twice in recent weeks for no reason.. An interval ensued between the first shooting and the second, yet no protective action was taken in Miss Duncan's interest as far as is known and subsequently her house was robbed. Miss Duncan has refused to mention the matter outside the embassy and consulate in order not to embarass her government.

These are facts that are widely known in Mexico City but which correspondents resident there know they cannot write without severe

State Cordell Hull, who has sincerely endeavored, in the opinion even of many whose interests are affected, to endeavor through lawful international means to seek a just solution of the perplexing situation.

He has been forced to take into consideration the fact that President Lazaro Cardenas is trying to raise the level of the Mexican poor and he has behind him the experience of various Secretaries of State and Presidents, who, in seeking to protect just American interests found themselves involved in a political issue at home with liberals and others splitting sharply over policies.

Although Mexican policy has its humanitarian aspects, it also is intensely nationalistic, as President Cardenas's official slogan, "Mexico for Mexicans," demonstrates. Rather than reciprocate for the cooperation of the United States, such as in the purchase of silver, Mexican policy, in operation, has been to take all possible advantages of the various Pan-American treaties to force the United States into the position either of using strong-arm methods, against which it has declared, or else failing effectively to protect the interests of its government and citizens.

Increase in Tariffs Cited

The United States, for instance, has a very low duty upon Mexican cattle on which large sales are made in the United tSates. Yet, in the face of Secretary Hull's trade program, President Cardenas published a decree in January, 1938, increasing tariffs from 100 to 400 per cent on the general tariff list. He only lowered these tariffs months later, after it was clear that barter deals with European dictatorships were in the making. The government at present is obtaining taxes running to about 20 per cent of gross production on silver sold to the United States Treasury.

It is a matter of record that, time after time, when the State Department was treating a subject amicably in Washington with the Mexican Ambassador, Dr. Francisco Castillo Najera, some new and more drastic legislation in Mexico City upset matters.

Although President Cardenas, in a manner that only be described as courageous, has sought to aid the Mexican people, he is sadly hampered by lack of money, and the opinion is frequently expressed by peasants and taxi drivers as well as the middle class that economic conditions in Mexico for the masses are, if anything, worse than they were two years ago.

On the government's cooperative farms the workers are under domination of the government banks, and, except for a few exceptions, farm workers have only received the same wages as under the former landowners. There is increasing misery and want in some sections.

Officials See Gain for People

The official view is that, in the long run, the people will gain, and this report covers only the immediate situation. It may be reported that a very large number of Mexicans and Americans acting as trade agents of the United States in Mexico feel that a solution of the oil problem is necessary if other problems, including trade, are to be worked out. This is because oil is one of Mexico's two largest industries and the nation's financial position has been severely disturbed by the present situation.

Some of these observers feel that the major oil companies have made serious mistakes in Mexico, one being that they did not pay large royalties to the government as they have for years in Venezuela and other Latin-American countries. On the other hand, these same people hold that the oil companies' punishment has far exceeded the mistakes and that the Mexican Government has been unduly harsh and uncompromising.

Meanwhile, Germany plays an extremely practical and dangerous game in Mexico with a great measure of success.

Woman to Give Library To Debt-Paying Finland

Special to THE NEW YORK TIMES.

PITTSBURGH, Jan. 19.—Finland's payments of her war debts to the United States so impressed Mrs. Malcolm McLeod, wife of the head of Carnegie Institute of Technology's English Department, that she announced today she would donate a library of English literature to the Finnish people "as a mark of appreciation from the American people."

"We are al impressed by the way in which Finland met its debts, and I want to do my bit," she said.

Mrs. McLeod has supplied literature for ten years to needy institutions in Egypt, Palestine, India, Korea, the Virgin Islands, Alaska,(Labrador and South Greenland.

Bonstedt as technical attaché of the General Staff of the army.

[The dispatch to which this statement refers did not mention re-election of the President or any army experts other than General Bonstedt.]

The Diario Nuevo denies that El Salvador is fascist, adding:

"Perhaps our friendly relations with government and people of Italy have been understood as fascism, but this is unwarranted, as the policy of our government is to maintain cordial relations with all the people of the world. El Salvador is a democratic country."

STRIKES IN BURMA GRAVER

Military Forces Being Sent Into the Affected Areas

Wireless to THE NEW YORK TIMES.

RANGOON, Burma, Jan. 19.—The situation in Burma with the development of strikes has grown more serious and military forces are being sent into the affected areas.

A thousand workers at the British-owned Burma Oil Company's refinery at Syrian struck as did employes of the British Burma Petroleum Company. The strikers, including women and children, now number 6,000.

Killed in Train-Auto Crash

PORT MONMOUTH, N. J., Jan. 19.—Mrs. Ellen Downey, 65 years old, of Port Monmouth, was killed almost instantly today when the automobile in which she was riding with her husband, John, was struck by a freight train at the Central Railroad of New Jersey crossing at Main Street here. The husband, who was driving, suffered bruises and several fractured ribs. Mrs. Downey is the mother of Patrolman John Downey Jr. of the Jersey City police.

SHIPPING

BOARD TO QUESTION 2 JAPANESE LINES

Maritime Commission Takes Up Charges of 'Unfair Practices' in Inter-America Trade

12/13

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 12.—The United States Maritime Commission began investigating today the activities in the Western Hemisphere of two of the largest shipping companies under the Japanese flag. This was after numerous protests from American shippers and shipping companies that they are employing "unfair practices designed to create chaotic and destructive conditions" in the South American-United States shipping.

The protests, the commission explained, followed "sudden, drastic and allegedly unwarranted reduction in rates" on the shipment of coffee and other things from South America to the United States. The lines which must answer before the commission at a hearing to be held here Dec. 20 are the Osaka Syosen Kabushiki Kaisha and the Yamashita Kisen Kabushiki Kaisha. According to the charges they have been demanding an increasingly larger share of South American-United States business or "its equivalent in revenue."

The commission issued subpoenas today directing the American agents of these companies to show it their books, records and correspondence. They were served on the former company in New York City and on Williams, Diamond & Co., their San Francisco agents, and on the latter company in Seattle, and on Swayne & Hoyt, its agents in San Francisco.

Case Deemed Major One

A third Japanese shipping company, the Kawasaki Kisen Kaisha, has warned, according to information supplied the Maritime Commission, that if an agreement is concluded between these two lines, it will demand a share in the revenue as its price for continuing inactive.

The commission is acting under Section 19 of the Merchant Marine Act of 1920. This lets it investigate

SHIPPING

...h a view to establishing regulations where conditions unfavorable to shipping result from competitive methods employed by foreign-flag ships. If the charges are proved the commission will promulgate rules to end the rate war. No punitive action is involved.

The commission deems the case to be a major one. Repercussions from Japan are anticipated.

"Information filed with the commission indicates that through rate cutting in 1935 OSK forced shipping companies who were members of the conference covering this service into an agreement guaranteeing OSK 3,500 bags of coffee per ship, or the equivalent in cash revenue," a statement by the commission says. "On this basis only, OSK agreed to observe the rates set by the conference lines.

Rate-Cutting Is Charged

It is alleged to have indicated its willingness to extend the agreement in 1937 if its share were increased to 4,500 bags, though it has carried only 25 per cent of its allotment, the statement adds. The conference lines refused, and OSK is accused of having immediately begun rate-cutting.

In December, 1937, the Yama-

Continued on Page Twenty

shita Line established its service from Japan to the Americas and operated as a conference member for nine months. It then resigned, the statement continues, "and immediately made drastic cuts in northbound rates, not only on coffee but on other commodities, including canned corned beef, linseed and babassu nuts." Yamashita is alleged to be offering now to contract with coffee shippers for 1939 at 50 cents per bag as against the conference rate of $1.

The commission says that coffee shippers have shown no dissatisfaction with existing rates and that conference members appear to have exhausted their means of preventing a rate war by yielding. It adds that the two Japanese companies are, according to protests, insisting on getting 25 to 30 per cent of the trade, "though their actual carryings to date are said to be less than 4 per cent."

"Yielding to the Japanese demands, it appears, would in substance be paying tribute to them upon the threat of demoralization of the trade," it says.

Mr. Healy said his client was "greatly relieved" at being free and ... [illegible] are hundreds of wit-

JAPANESE ASSAILED ON SHIP RATE CUTS

West Coast Coffee Carriers Tell Maritime Board Flag May Be Driven From Sea

12/22/38

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 21.—The Maritime Commission began an investigation today of charges that Japanese shipping interests were employing "unfair trade practices" in the trade between the Pacific Coast and the east coast of South America. Unless the situation is cleared up, according to the testimony, a "suicidal rate war" may develop, the outcome of which may be the disappearance of the American flag from the trade routes involved in the rate-slashing.

Under investigation are the lines Yamashita Kisen Kabushiki Kaisha and Osaka Syosen Kabushiki Kaisha which, according to the evidence, demanded a 25 per cent share of the coffee trade between South America and the Pacific Coast. The Japanese, it was testified, threatened a drastic slashing of rates on coffee shipments between Brazilian ports and Los Angeles, San Francisco, Seattle and Vancouver, B. C., unless their demands were granted.

The demand was referred to the shipping conference covering the trade, but the reduction in rates followed. The fixed rate is $1 a bag of 132 pounds. Yamashita cut its rate to Los Angeles to 50 cents a bag, while O. S. K. slashed its charges to 80 cents a bag.

Japanese Will Be Heard Today

All the witnesses today represented complainants. The Japanese will have their chance tomorrow to refute the charges.

The first witnesses represented Pacific Argentine Brazil Line, Inc., and the Westfal Larsen Steamship Company, the first of American, the latter of Norwegian ownership; the Pacific Coast Coffee Association and the Oregon and Washington branches of the Pacific Coast Cof-

THIS PAGE IS DECLASSIFIED IAW EO 13526

develop, the outcome of which may be the disappearance of the American flag from the trade routes involved in the rate-slashing.

Under investigation are the lines Yamashita Kisen Kabushiki Kaisha and Osaka Syosen Kabushiki Kaisha which, according to the evidence, demanded a 25 per cent share of the coffee trade between South America and the Pacific Coast. The Japanese, it was testified, threatened a drastic slashing of rates on coffee shipments between Brazilian ports and Los Angeles, San Francisco, Seattle and Vancouver, B. C., unless their demands were granted.

The demand was referred to the shipping conference covering the trade, but the reduction in rates followed. The fixed rate is $1 a bag of 132 pounds. Yamashita cut its rate to Los Angeles to 50 cents a bag, while O. S. K. slashed its charges to 80 cents a bag.

Japanese Will Be Heard Today

All the witnesses today represented complainants. The Japanese will have their chance tomorrow to refute the charges.

The first witnesses represented Pacific Argentine Brazil Line, Inc., and the Westfal Larsen Steamship Company, the first of American, the latter of Norwegian ownership; the Pacific Coast Coffee Association and the Oregon and Washington branches of the Pacific Coast Coffee Agencies, the organization of the roasters.

H. D. Maxwell of San Francisco, president of the Pacific Coast Coffee Association, testified that the conference carriers had proposed a rate of 90 cents a bag for 1939, provided that 100 per cent of the coffee receiving interests signified acceptance in writing. Two receivers in Los Angeles refused to sign and the proposition was withdrawn by the conference.

Under date of Nov. 5, the 90-cent proposal was offered again, it being pointed out that failure of the Pacific Coast receivers, as a whole, to sign a contract would "obviously result in a rate war that would upset the stability of the trade." The Los Angeles receivers again refused to sign.

On Nov. 8, Yamashita sent a letter to the Pacific Coast Coffee Association announcing withdrawal of that line from the shipping conference. It was signed for Yamashita by Swayne & Hoyt, Ltd., its agents in San Francisco, and by G. S. Mack, its foreign freight agent.

In the letter Yamashita asserted that the reason "generally speaking" for its exclusion from the coffee trade was the "result of certain anti-Japanese propaganda and other information of similar nature which was given to us by the various importers."

Cuts Rate to 50 Cents a Bag

A week later Yamashita in another letter to the association announced that it was prepared to "entertain contracts from any and all receivers at a definite rate of 50 cents a bag through the year of 1939." The 50-cent rate applied to Los Angeles and San Francisco. It was 75 cents a bag for Portland, Tacoma, Seattle and Vancouver. About the same time O. S. K. announced a reduction in its rates to Los Angeles from $1 to 80 cents a bag.

"Mr. Maxwel ltestified that a 50-cent rate for all lines in the Pacific would mean chaos in the trade and "might very well precipitate a suicidal rate war," since New York and New Orleans "could be expected to take retaliatory measures."

George C. Sprague, counsel for O. S. K., was asked by Admiral Wiley, a member of the commission, if he thought the 20 per cent reduction made by O. S. K. was justified.

"We think that under the circumstances it is fair," said Mr. Sprague.

"Why is it fair?" asked Admiral Land, chairman of the commission.

"We only touch two coffee ports in Brazil while the conference ships touch four such ports, and we necessarily have certain difficulties in competition," Mr. Sprague replied.

"In other words," said Admiral Land, "you think that American ships should pay the difference?"

"No, I do not," Mr. Sprague answered.

J. W. Vaux of Seattle, speaking for the Northwestern coffee roasters, said that a 50-cent rate might mean the withdrawal of the American flag from the trade.

Ralph W. Bybee of San Francisci, foreign trade agent of the Pacific Argentine Brazil Line, discussed the situatio nthat would follow should the Conference lines attempt to carry coffee at 50 cents a bag.

"This would amount to over $300,000 a year loss of revenue to the Conference lines and in excess of $12,000 a voyage," Mr. Bybee said. "The attitude of the Japanese lines, moreover, indicates that there is every intention, if the Conference lines attempt to meet the 50-cent rate, that this rate would be reduced even lower."

Mr. Bybee testified that not only have the Japanese lines slashed coffee rates, but have made sweeping reductions below the Conference rates on canned goods, fertilizers, oil-bearing nuts, seeds and other commodities which are important items in the West Coast-South American trade.

JAPANESE SUBMIT IN SHIP RATE CLASH

Two Lines Agree to Charge Same Tariff on Coffee as American Vessels

12/23/38

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 22.—The hearing before the Maritime Commission involving charges that two of the largest of the Japanese shipping lines are engaged in unfair trade practices, which threaten chaos in the Pacific Coast-East Coast of South America trade, came to an unexpected end today.

The Japanese lines are the Osaka Syosen Kabushiki Kaisha and the Yamashita Kisen Kabushiki Kaisha. They announced that they would not contest the accusations and in the future they would charge rates identical with those set by American and other carriers operating in the same trade.

They said they would immediately apply for membership in the Pacific Coast-River Platte-Brazil Steamship Conference and that their rate for carrying coffee in 1939 would be 90 cents a bag, which is the rate suggested by the conference. The present rate is $1 a bag.

The commission agreed to the proposal and, with the consent of the Japanese lines, entered an order directing them to desist from practices which threatened a rate war.

"Suicidal" Results Avoided

According to the evidence before the commission, such a rate war would have had "suicidal" results so far as the American and other lines in the conference are concerned. Yamashita had announced its intention to cut the rate from $1 to 50 cents, while the rate charged by Osaka was 80 cents a bag.

It was asserted that the Japanese had demanded that from 25 to [illegible] per cent of the Pacific Coast-Brazil coffee business be assigned to them, and in the event the cargo carried was below the percentage demanded, the conference lines to pay them the equivalent in revenues. When this demand was refused, the Japanese lines withdrew from the conference. The rate cutting followed fast, and the commission decided to act.

When the hearing convened today George C. Sprague of New York, counsel for Osaka, and A. Lane Cricher of Washington, counsel for Yamashita, told the commission that the lines were ready to rejoin the conference and to abide by the rate of 90 cents for 1939.

RATE WAR LOOMS IN BRAZIL SHIPPING

12-23-38

Barring of New Line by Freight Conferences May Be Cause of Fight for Trade

COURT ACTION SEEN LIKELY

U. S. Reported to Be Opposed to Concern Which Formerly Ran Government Ships

New York shipping men are awaiting the outcome of a threatened fight between the two United States-Brazil freight conferences and the Sprague Steamship Agency, Inc., to which was denied membership in the conferences on Wednesday.

The Sprague concern, a subsidiary of C. H. Sprague & Co. of Boston, former operators of the American Republics Line for the account of the United States Maritime Commission, has already entered the northbound trade from Brazil with chartered foreign tonnage, and although no plans are known for participation in the southbound service, steamship men here believe the company will schedule vessels within a few weeks.

If the company enters the trade with a full schedule of sailings independent of the existing conference, rate cutting is inevitable and a rate war of disastrous proportions would probably ensue.

The two freight groups, the River Plate and Brazil Conference, covering southbound commerce, and the Brazil United States Freight Conference, handling northbound shipments, rejected the application of the Sprague agency on the grounds that the trade was already adequately served with tonnage, and that entry of the new line would "demoralize" the trade.

The situation is complicated by ramifications that include Federal membership in the conferences, through the Maritime Commission, and by the reported opposition of the government to the new line. This opposition is based in part on the plan of the company to employ foreign tonnage under charter and also on the fact that the Sprague concern will enter competition with the Maritime Commission on the basis of experience gained as government representatives.

In most cases of the past the attitude of the government has been that no steamship company, willing to subscribe to the regulations of any given conference, and capable of meeting its requirements, should be barred from membership without just cause.

The regulations of the two conferences in question specify that any "firm, person or corporation" may be admitted to membership by a two-thirds vote of the members. Applications must deposit in bonds or cash $20,000 with each conference.

Shipping men in New York were of the opinion yesterday that the Sprague concern could force its way into the conferences by legal action, in the absence of satisfac-

U. S. Reported to Be Opposed to Concern Which Formerly Ran Government Ships

New York shipping men are awaiting the outcome of a threatened fight between the two United States-Brazil freight conferences and the Sprague Steamship Agency, Inc., to which was denied membership in the conferences on Wednesday.

The Sprague concern, a subsidiary of C. H. Sprague & Co. of Boston, former operators of the American Republics Line for the account of the United States Maritime Commission, has already entered the northbound trade from Brazil with chartered foreign tonnage, and although no plans are known for participation in the southbound service, steamship men here believe the company will schedule vessels within a few weeks.

If the company enters the trade with a full schedule of sailings independent of the existing conference, rate cutting is inevitable and a rate war of disastrous proportions would probably ensue.

The two freight groups, the River Plate and Brazil Conference, covering southbound commerce, and the Brazil United States Freight Conference, handling northbound shipments, rejected the application of the Sprague agency on the grounds that the trade was already adequately served with tonnage, and that entry of the new line would "demoralize" the trade.

The situation is complicated by ramifications that include Federal membership in the conferences, through the Maritime Commission, and by the reported opposition of the government to the new line. This opposition is based in part on the plan of the company to employ foreign tonnage under charter and also on the fact that the Sprague concern will enter competition with the Maritime Commission on the basis of experience gained as government representatives.

In most cases of the past the attitude of the government has been that no steamship company, willing to subscribe to the regulations of any given conference, and capable of meeting its requirements, should be barred from membership without just cause.

The regulations of the two conferences in question specify that any "firm, person or corporation" may be admitted to membership by a two-thirds vote of the members. Applications must deposit in bonds or cash $20,000 with each conference.

Shipping men in New York were of the opinion yesterday that the Sprague concern could force its way into the conferences by legal action, in the absence of satisfactory reasons for the rejection. They pointed out that the demoralization of the trade, as foreseen by the conference, would also result if the Sprague concern precipitated a rate war by competing outside the conference agreement.

BUSINESS and GOVT. DEALS AND ACTS FURTHERING PEACEFUL PENETRATION

MEXICO PROMISES ITALIANS PAYMENT

Owners of Michoacan Estates That Were Seized Will Be Promptly Recompensed

FAMILY TO GET $500,000

Americans Are Still Waiting, and at the Proposed Rate They May Wait Eighteen Years

12/13

Special Cable to THE NEW YORK TIMES.

MEXICO CITY, Dec. 12.—Efrain Buenrostro, Secretary of National Economy, asserted today that the Mexican Government had "ordered immediate payment" for the estates known as Nuevo Italia and Nuevo Lombardia in the State of Michoacan, which were expropriated and divided among peasants several weeks ago personally by President Lazaro Cardenas. The properties were owned by the Italian-Mexican Cusi family.

Such a payment is almost unprecedented and is regarded as extremely unusual in view of the fact that the United States landowners are still unindemnified for their property that has been taken, although negotiations looking toward installment payments on the indemnities beginning May 1, 1939, are now in progress.

The amount of cash that the government will pay to the Cusi family was variously estimated today between $100,000 and $260,000. It was reported that bank loans on the property totaling about $400,000 at the present exchange rates were being canceled by the government, bringing the Cusi family's effective immediate indemnity to about $500,000.

The government has not made any such indemnity agreement with the American owners of the $8,000,000 Los Mochis sugar and vegetable plantation, in the State of Sinaloa, which was divided last week. By agreement between the Mexican Government and the American State Department, the question of indemnity for this estate has been passed over to the pending claims that Mexico has agreed to pay off at the rate of $1,000,000 annually.

The addition of Los Mochis to the United States claims raises these from about $10,000,000 to about $18,000,000. At the proposed rate, therefore, it will be eighteen years before the American landholders are entirely recompensed.

NEW GERMAN PACT FOR BRAZIL LIKELY

Cotton Interests Are Pressing for It, Though Aranha Denies Barter Negotiations

CHANGED SYSTEM IS SEEN

It Is Believed U. S. Has Urged Rio de Janeiro to Buy No More Than Reich Does

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, Dec. 17.—A report recently published abroad that Brazil was negotiating a new barter agreement with Germany was emphatically denied today by Foreign Minister Oswaldo Aranha.

Germany for some time has been trying to insure her position in Brazil's trade, as their barter treaty negotiated in 1935 expired in July, 1937, and remains in effect only by virtue of extensions every ninety days.

Berlin appointed Karl Ritter, an expert in trade matters, Ambassador to Brazil, and instructed him to try to obtain greater trade advantages, but he recently was declared persona non grata and resigned. He presented the draft of a new treaty to Brazil, but thus far it remains unsigned.

Apparently, however, Brazil must eventually sign. On the one hand, cotton interests are urging the government to accept the German terms, and on the other, Brazilian officials have often declared that Brazil must trade with all nations. Moreover, Germany is the only buyer of low-grade cotton.

While the United States pays in dollars, Germany has paid in compensated marks that can be used only for the purchase of German products, thus the more Germany purchases from Brazil, the greater German exports to Brazil.

U. S. Suggestion Seen

It appears at first glance, however, that Brazil is eager to regulate German trade on different lines than those heretofore followed. It is probable in this connection that the United States, which is Brazil's best cash customer, has made friendly diplomatic complaints, pointing out, it is believed, that Germany has sold Brazil more than she has purchased from her.

It is held likely that in the course of these representations an American suggestion was made that Brazil regulate her purchases from Germany to equalize them with Germany's purchases from Brazil. Following this line of thought, Brazil would suspend exports to Germany any time the compensated mark holdings of the Bank of Brazil reached a certain level and would maintain the suspension until equilibrium had been re-established.

The United States, however, appears doomed to lag behind Germany until a total revision of its credit system is undertaken to meet the long terms Germany grants. German sales here may top those of the United States again this year.

It is felt here that the United States has gained much politically in Latin America as a result of the Good Neighbor policy, but has not made headway economically.

Uruguay and Italy in Pact

MONTEVIDEO, Uruguay, Dec. 17 (AP).—President Alfredo Baldomir today approved a trade agreement with Italy under which Italy agreed to buy 180,000,000 lire worth of Uruguayan products in 1939 in comparison with 60,000,000 lire worth bought this year.

CHILE INAUGURATES LEFTIST PRESIDENT

Thousands Line the Streets to Cheer Aguirre but Also to Laud His Predecessor

31 DELEGATIONS PRESENT

First Official Act Is Decree of Amnesty for Nazis Who Took Part in Revolt

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Dec. 24.—The first "Popular Front" government on the American continent was solemnly inaugurated this afternoon with the taking of office of President Pedro Aguirre. He was the Leftist winner on Oct. 29 in the most bitter and important struggle for political supremacy that has been registered in Chile's history.

In the sweltering heat almost 100,000 persons turned out in the streets to see the outgoing President, Arturo Alessandri, drive up to the Congress Building. There, in the course of an impressive ceremony witnessed by specially appointed delegations from thirty-one countries, the diplomatic corps and enormous crowds, the new President took the oath and donned the tricolored band, symbol of the Chief of the State.

A specially organized train service had been pouring in thousands of citizens from the provinces for days and the streets of the capital this afternoon were packed by onlookers who wildly cheered President Aguirre. The army, navy, aviation and police corps marched with military bands playing the national anthem in scenes of great excitement.

Hours beforehand the Congress Building was filled to the utmost and the brightly illuminated Salon de Honor was a mass of color. Both Señor Alessandri and Señor Aguirre were cheered when late this afternoon the latter was officially proclaimed President of Chile.

After the inauguration President Aguirre signed his first decree declaring amnesty and complete freedom from responsibility for all those involved in the Sept. 5 revolt. This means that Jorge Gonzalez von Maree, leader of the Nazi party who is in prison as the leader of the revolt and many other Nazi leaders awaiting judgement will be released.

The signing of this decree confirmed the report that Nazi support was given to Señor Agüirre on the understanding that he would endeavor to clear up charges against those arrested after the thwarted September uprising.

MONEY FOR LANDS VOTED BY MEXICO

Ten Million Peso Item to Pay on Seized Properties Is Put in Budget for 1939

Special Cable to THE NEW YORK TIMES.

MEXICO CITY, Dec. 23.—Mexico's budget for 1939 includes 10,000,000 pesos for the payment of indemnities for both American and Mexican-owned lands that have been expropriated. The budget, based on estimated income of 445,000,000 pesos and passed by the Chamber of Deputies with proposed expenditures of that amount, is the highest in Mexico's history.

No provision was added for the resumption of payment of other foreign debts, with the exception of the $500,000 annuity on American claims.

At a secret session of the Senate a resolution was presented by Niceforo Guerrero, former Attorney General, asking that Mexican landowners be also paid $1,000,000 every year just as was agreed regarding American landowners whose property has been taken.

Amendments in the regulations of the Bank of Mexico passed last night by the Chamber will be favorable to business in some aspects. Mexico's central bank is no longer authorized to accept deposits and these are at present estimated at more than 40,000,000 pesos. This sum will be transferred to other banking institutions of the country enabling them to increase the amount available for credits since the banking law provides that a fixed proportion of deposits shall be used for credits.

Danger of Inflation

The new provisions granting the Bank of Mexico's bills a position as unrestricted legal tender, however, it is pointed out, leaves the door open to inflation. This fear exists in spite of the declared attitude of the government against issuing more money than is necessary for normal activities.

It is reliably reported that business men are also worried over the provisions that virtually eliminate the fixed proportion between the Bank of Mexico's reserves and the paper money in circulation. The government's overdraft, although partially eliminated through the devaluation of reserves, will be maintained, since the issuing of interest-bearing treasury certificates represents new borrowings.

This overdraft, which President Lazaro Cardenas in his speech to Congress on Sept. 1 announced had reached 80,000,000 pesos, will be partly repaid by the revaluation of the bank's reserves on the basis of the present peso-dollar quotation instead of the 3.60 basis that obtained before the devaluation of the peso that followed the expropriation of foreign oil properties. The authorized issuance of notes, however, is limitless, since it is based on accordance with monetary needs of the country.

Oil May Be Released

Wireless to THE NEW YORK TIMES.

HAVRE, France, Dec. 23.—An agreement was reached today between the Mexican Eagle Company and a group of French importers by which the attachment on a shipment of Mexican oil that has been held here since October may be raised within the next week.

The agreement does not affect the ultimate decision as to the ownership of the oil. This will be rendered later by the courts.

In the meantime, the Importers Syndicate, which announced the private arrangement, warned French importers against oil purchases from the Mexican Government. It pointed out that the costs of storage on this one oil shipment plus the taxes amounted to 1,000,000 francs.

Under the agreement a deposit of $50,000 dollars has been made by the purchaser and the Mexican Eagle Company which, it is expected, will benefit by the court decision.

CHILE'S NEW REGIME DROPS 7 GENERALS

They Retire at Suggestion of Leftist Defense Ministry—Army Chief Among Them

OTHER SHAKE-UPS IN VIEW

Prieto, Loyalist Envoy, Warns Popular Front to Bar Strife Lest the Rightists Rise

SANTIAGO, Chile, Dec. 27 (AP).—Seven generals of the Chilean Army retired today at the suggestion of the Defense Ministry as the new Popular Front government headed by President Pedro Aguirre Cerda busily organized its administrative machinery.

Among those who resigned was General Oscar Novoa, army Commander-in-Chief, who advised the Conservative candidate for President, Gustavo Ross, not to contest the Oct. 25 election because, he said, the country was on the verge of revolution. He was expected to be replaced by General Carlos Fuentes, a former Chief of Staff.

The resignation of Air General Diego Aracena also was accepted. Moreover, fifteen airway colonels also prepared to retire, bringing about a change in the commanders of the military school and all units of the Santiago garrison.

It was expected that the majority of resignations of Chilean diplomatic representatives abroad, tendered as a matter of routine at the advent of a new administration, would be accepted.

It was reported without confirmation that one of the first acts of the administration would be to send a message to Congress on the recognition of the government of Soviet Russia.

More than 300 political prisoners, including Chilean Nazis captured in the revolt of Sept. 5, were freed by an amnestry after the first Popular Front government in South America took office Saturday. Among those pardoned was Jorge Gonzalez von Maree, considered a leader of the revolt.

A group of Rightest Deputies planned to present an accusation charging violation of the Constitution against Minister of Justice Raul Puga for having signed the amnesty decree. The Court of Appeals met and decided to report the amnesty matter to the Supreme Court, which meets Friday.

The retiring President, Arturo Alessandri, addressed a petition to the Chamber of Deputies asking authorization to leave the country. Under Chile's Constitution an outgoing President must remain in the country at least six months unless Congress grants special permission for him to leave.

SANTIAGO, Chile, Dec. 27.—A stir has been caused in political quarters here by Indalecio Prieto, special Ambassador of the Spanish Government to the inauguration of President Pedro Aguirre Cerda, by a warning that the political situation in Chile after the Popular Front triumph at the polls was gradually running parallel to that of Spain before the outbreak of the civil war.

Speaking last night at a meeting attended by Socialists, Radicals, Nazis and Communists, Señor Prieto, former Defense Minister of the Spanish Loyalists, urged Chilean Leftists to beware of the Rightist reaction that he said would come inevitably if divisions were created in the Leftist block by internal discussion concerning methods of government.

COUNTER ACTION

Black Ribbons and Looks Greet Reich Cadets in Cuba

12/20/38

By The Associated Press.

SANTIAGO, Cuba, Dec. 19.—Ancient cannon at Santiago's Morro Fortress roared a customary salute and everything looked festive to the 500 officers and men of the German school ship Schleswig-Holstein for a brief period today. Then things got cloudy.

The cadets came ashore to find resentful looks. Thirty thousand workmen lined the docks and downtown streets, each with a black ribbon in his lapel. It was an official "demonstration of displeasure" ordered by the Federation of Labor of Santiago.

Police rushed up reinforcements, and several demonstrators were arrested.

Military officials whisked Hans Herman Voelckers, the German Minister in Havana, from one formal welcoming function to another. He flew from Havana Saturday to join school ship officers and cadets in what was to have been a tropical "fiesta" with accent on German-West Indian good-will.

URGES NAZI SHIP BOYCOTT

12/19/38

Costa Rica Paper Says Merchant Marine Is Navy Auxiliary

Special Cable to THE NEW YORK TIMES.

SAN JOSE, Costa Rica, Dec. 18.—A boycott by Latin America of the German merchant marine is advocated today by the Prensa Libre in an editorial that warns that the entire continent is threatened by economic penetration and armed attack from the totalitarian governments. It charges that the attacks will be made by the navy augmented by the marchant marine which is made up of convertible auxiliaries.

It charges that that part of the Latin American press that pretends to fear "Yankee imperialism" is only repeating Nazi propaganda. "They are obeying servilely those whom they fear or who pay them," it says.

It charges that merchant ships are armed or can be easily armed and adds that "these ships are now used to carry to Europe the best of our products for which freight is paid in gold, which permits them to arm to attack us, and we are paid with aski marks, redeemable only in German goods in kind, quantity and price determined in Germany."

In order to aid the task begun at Lima it urges that "banks, merchants, planters and all democratic authentic Americans should unite in driving the German merchant marine from American ports." It concludes that America should avoid all kinds of commerce with the totalitarian States so long as the menace exists.

:W YORK TIMES, THI

BRITISH TRY TO BIND ARGENTINA TO U. S.

But Fear Influence Will Not Be Sufficient to Swing Buenos Aires to Defense Solidarity

SPOKESMAN VOICES WORRY

German, Italian Press Keeps Up Attack on Lima Parley—It Js Held Total Failure

12 22 38

Special Cable to THE NEW YORK TIMES.

LONDON, Dec. 21.—A swing by Argentina toward the United States view at the Pan-American Conference would be welcomed in London, but the ability of British influence to bring this about is a cause of some doubt.

It is probable that the British Ambassador to Buenos Aires has done what he could to aid a policy with which the British are wholly in agreement, but it must be taken into account that earlier British efforts to swing Argentina in other directions have not met with much success.

In two instances, to cite no more, namely, at wheat conferences and those dealing with frozen foreign exchange, Argentina as far as Britain is concerned, has always been the bad boy of the South American family. That the British Ambassador could meet with better success at the Lima conference in the face of combined Fascist and Nazi lobbying is therefore regarded as unlikely.

This trade publicity and propaganda are just as objectionable to Britain as to the United States and protests thus far have done little to check it.

From the outset of the conference Britain has looked with sympathy and almost eagerness at the United States's so-called continental defense policy, probably feeling that the United States has a better chance of rearming on this score than on any European threat. Once strongly armed, it is thought, the United States would be a bigger factor in the preservation of the peace of the world—particularly this side of it.

British Concern Voiced

LONDON, Dec. 21 (AP).—The British Foreign Office, alarmed by the success of Rome-Berlin propaganda in South America, cautiously listed that continent as a potential source of trouble today.

An informed British spokesman, after reading official dispatches from Lima, scene of the Pan American Conference, said:

"President Roosevelt's attempt to secure continental solidarity is of supreme importance to democracies.

"We cannot ignore the possibility that in event of war in Europe a series of uprisings may take place in South America against democracies."

Informed British quarters blamed subversive propaganda and German trade methods for most opposition to the original United States proposal for continental defense. They also declared that British and United States business interests had not been too considerate of South Americans.

The controlled German and Italian press today decried President Roosevelt's efforts to avert outside interference in South America.

Nazi newspapers described conference moves to weld the American republics into a defensive unit as "U. S. A. Failure No. 1." They called the whole conference a failure and condemned what they called President Roosevelt's "imperialism" and his "Jewish-controlled government."

Count Ernst von Reventlow, one of Chancellor Adolf Hitler's oldest disciples, urged the United States to abandon the Monroe Doctrine.

"We Germans have every interest in having the States of South America strong and independent," the Count wrote in his weekly newspaper Reichswart.

"In order that these qualities may be fully developed it is necessary that among other things the Monroe Doctrine and its various complements be abolished. Nothing more than an act of will is necessary to do this."

U. S. AMBASSADOR NAMED TO VENEZUELA

Roosevelt Elevates Diplomatic Exchange—Picks F. P. Corrigan

WASHINGTON, Dec. 23 (AP).—United States diplomatic ties with Latin America were further strengthened today when President Roosevelt elevated the American legation in Venezuela to an embassy. Venezuela also will open an embassy here.

The action emphasized friendly relations with the world's third largest oil-producing country, which European nations have courted assiduously in recent years.

A State Department announcement said:

"The elevation in the grade of our mission there is due to the increasingly cordial and friendly relations between the United States and Venezuela during recent years which has been accompanied by a progressive and substantial growth in the commerce betwn th two countris."

Prsident Roosevelt appointed Frank P. Corrigan of Cleveland, now Minister to Panama, as the first Ambassador to Venezuela. He succeeds Antonio C. Gonzalez of New York, whose resignation as Minister to Caracas was accepted, effective Feb. 1.

The development of Venezuelan petroleum resources is due largely to American and British oil companies that retired from Mexico during the oil controversy there in the late Nineteen Twenties. The first petroleum was exported in 1931 and by 1934 the exports had reached 142,000,000 barrels a year.

Elevation of a legation to an embassy is considered a signal honor, emphasizing the growing importance of the country involved. Ambassadors are the President's personal envoys, while Ministers represent only the Secretary of State.

Ships to Latin America Cut Rates for Students

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 28.—Co-operating with the government's program of facilitating the exchange of professors and students with Latin America, the American Republics Line, the Grace Line and the Mississippi Shipping Company, beginning the first of the year, will grant 50 per cent reductions from advertised fares for students, teachers and professors traveling between the United States and South America.

The British-owned Furness-Prince Line will also grant the same reductions. The arrangement was made by the companies through discussions with the United States Maritime Commission and was communicated to the State Department today.

Sumner Welles, Acting Secretary of State, said that the plan was a very gratifying development which would insure a greater interchange of teachers, students and professors between the American republics.

NECESSITY FOR NAZI-FACIST EXPANSION

FOOD OUTPUT LIMIT IS SEEN BY HITLER

He Tells 3,000 Road Workers Reich Will Have to Adjust Consumption Accordingly

GOEBBELS ASKS COLONIES

Completion of the 3,000th Kilometer of Superhighway Is Celebrated at Meeting

BERLIN, Dec. 15 (AP).—Chancellor Adolf Hitler told 3,000 German road workers tonight that Germany had about reached the limit of her food production and the country's consumption would have to be adjusted accordingly. He spoke in connection with the completion of 3,000 kilometers [1,864 miles] of new highways.

Earlier, Propaganda Minister Joseph Goebbels had declared Germany needed colonies because her territories failed to supply her essential needs.

"We are getting today more out of German sail than any country in the world is getting out of its soil, but there is a limit to it," Herr Hitler said.

"It is necessary, therefore, to reckon with all realities, one of which is the right appreciation of the world around us.

"We want to make Germany so strong that no one can crush us. "For this it is necessary that we organize our consumption so that we can cover it from our own production as far as possible."

Stresses Aid to Employment

The Chancellor said that motorization of the country was well under way and that building of Germany's great automobile roads with associated construction had absorbed a great amount of unemployment.

"The job of creation is not a problem of pay, but of productivity," he said. "Other countries have opposite views, with the result that there is more unemployment and currencies are devaluated there.

"There is one sphere where no increase has been possible and that is food."

Herr Hitler Mentioned briefly Ger-

consumption would have to be adjusted accordingly. He spoke in connection with the completion of 3,000 kilometers [1,864 miles] of new highways.

Earlier, Propaganda Minister Joseph Goebbels had declared Germany needed colonies because her territories failed to supply her essential needs.

"We are getting today more out of German sail than any country in the world is getting out of its soil, but there is a limit to it," Herr Hitler said.

"It is necessary, therefore, to reckon with all realities, one of which is the right appreciation of the world around us.

"We want to make Germany so strong that no one can crush us.

"For this it is necessary that we organize our consumption so that we can cover it from our own production as far as possible."

Stresses Aid to Employment

The Chancellor said that motorization of the country was well under way and that building of Germany's great automobile roads with associated construction had absorbed a great amount of unemployment.

"The job of creation is not a problem of pay, but of productivity," he said. "Other countries have opposite views, with the result that there is more unemployment and currencies are devaluated there.

"There is one sphere where no increase has been possible and that is food."

Herr Hitler Mentioned briefly Germany's fortifications along the French frontier, which he said had been forced upon her by others and at times had given employment to 400,00 men, not counting regular labor service men and soldiers. He asserted that the fortifications were not copies of others—apparently referring to France's Maginot Line—but had been conceived purely on German lines.

In his address, Dr. Goebbels stated that "other peoples are allowed to possess them [colonies], but we Germans aer not," and added:

"In Germany almost 140 persons live on one square kilometer [about 360 persons to a square mile]. Germany is not to be blamed for this narrow space within which to live.

"Although it has been widened [by annexation of Austria and the Szecho-Slovak Sudetenland], it is not sufficient to supply Germany's essentail needs. But the foreign press denies Germany's right to have colonies."

Speaks at "Comradely Evening"

Wireless to THE NEW YORK TIMES.

BERLIN, Dec. 15.—Speaking at a "comradely evening" in the People's Theatre before 3,000 road laborers from all parts of Germany assembled in Berlin at his invitation, Chancellor Hitler tonight brought to a close a day of celebrations marking the opening of the 3,000th kilometer of the Reich's Autobahn or superhighway, which occurred this morning in Rangsdorf in the presence of Fritz Todt, the road's designer.

"I cannot be at every place," the Chancellor told his roadbuilders, 'a'nd so I expect you to come today to see me."

Emphasizing the importance of roadbuilding in the German economy, Herr Hitler said that it would not have been possible to build the western border fortifications so quickly without "the cooperation of the Autobahn's organization and labor strength."

"Perhaps the union of the German people in the Great German Reich was possible without a bloody battle only through this work," he continued. "Millions of Germans thereby have become continually happy. They can celebrate Christmas with us for the first time."

Chancellor Hitler was introduced by Herr Todt, who, on behalf of the roadbuilders, presented to him a plaque commemorating the completion of the 3,000th kilometer.

With the opening of the new stretch today, the 1938 roadbuilding program has been completed on exactly the day planned and the so-called ring around Berlin has been finished.

The completion of the new stretch makes it possible to travel by automobile within Germany from the North Sea to the Alps and from the East to the industrial West on the superhighway without once leaving it, passing through a village or meeting a crossroad, and at whatever speed the driver cares to travel.

The 3,000 laborers attended the official opening ceremony at Rangsdorf and later lunched in Deutschland Hall in Berlin, where they were entertained by the band of Chancellor Hitler's bodyguard and where in a speech Herr Todt informed them that it was planned to complete 1,000 kilometers of the Autobahn a year.

Dr. Joseph Goebbels, the Minister of Propaganda, then addressed the laborers and after reviewing Herr Hitler's achievements told them: "Leadership without a people is as worthless as a people without leadership."

Herr Hitler arrived in Berlin from Munich late in the afternoon for his last official visit of the current year. He will attend Cabinet sessions at which pending measures will be disposed of, along with routine matters.

Herr Hitler will also receive the new Chinese Ambassador, Chen Chieh, who has been waiting here to present his credentials.

The delay is reported to have been caused by official objections to certain passages in the envoy's presentation speech. It is believed that they referred to the Japanese invasion of China. The text is reported to have been amended and the Chinese Government's diplomatic representative will now be received with the ceremonial accorded to other Ambassadors.

Herr Hitler will return to Munich and Berchtesgaden this week-end for his Christmas holiday. He will spend Christmas eve with old Nazi party colleagues in Munich and will then go to Berchtesgaden, where he will remain until after New Year's Day.

U.S. AIMS AT LIMA SHARED BY BRITAIN

South American Interests of London Held Complementary to Those of Washington

MENACE TO TRADE IS CITED

Largest Single Source of Oil for Fleet Is Venezuela and the Surrounding Countries

Wireless to THE NEW YORK TIMES.

LONDON, Dec. 25.—The activities of the Pan-American conference at Lima have been watched with the keenest interest here because Britain, although barred from the conference itself, has an interest in South America equal to that of the United States.

Britain's interest is described here—politically at least—as complementary to that of the United States. Although it is granted that the two countries are in competition from a trade viewpoint these differences, it is said, are dwarfed by the menace of the trade technique of Italy and Germany and the political propaganda of both these nations. To the names of those two nations there should be added, according to many British officials, Franco Spain.

Some months ago all British diplomatic missions in South America were told of the attitude of the government and ordered to work in the closest harmony—in the Foreign Office phrase—with "your American colleagues." These instructions are acknowledged here simply as recognition of the fact that the interest of both countries is equally affected by the attempt of the dictators to establish their own brand of political ideology below the Equator.

Britain is also equally concerned over the tendency of foreign trade, as carried out by the dictators, to get itself mixed up with German and Italian propaganda.

British officials believe that South America is one of their strategic necessities. If war comes they believe they must feed Britain in the main from South America and even more important the largest single source of oil for the British fleet is Venezuela and surrounding nations.

That consideration is what makes Britain watch the South American situation so closely. The Mexican Government's seizure of the oil lands owned by British companies was followed by the most peremptory diplomatic action Britain has taken in years—the wtihdrawal of her Minister. Mexico meets only a small part of Britain's oil consumption; it was the fear that the Mexican action would spread that caused the diplomatic rebuke.

While Britain does her best to support the United States in its attempt to reach hemispherical solidarity, the Foreign Office is doing its best to set Britain's own house in order as far as South America is concerned. Taking the Mexican action as their text, officials are urging British companies to come to terms with their South American employes and forestall similar action by other States.

It is believed here that more and more South American countries will insist on exploiting their own resources for their own benefits. And as far as they can, Foreign Office officials are trying to make sure that Britain will meet that threat in a way that will insure South American trade for Britain in her hour of need.

GERMANY'S DRIVE FOR TRADE

So much has been said recently of the success of Germany's drive for foreign trade, and so much advice has been given to the democracies about the necessity of discarding their own old-fashioned methods and following the German lead, that it is interesting to look at the figures reported in a dispatch from Berlin yesterday. They show for the first eleven months of 1938 a trade deficit of 400,000,000 marks, compared with a favorable balance of 422,000,000 marks for the same period of 1937. This is scarcely success, measured by Germany's own standard of achieving a balance between exports and imports that will enable her to pay for the goods she buys with the goods she sells, and thereby conserve her depleted reserves of foreign exchange.

The fact of the matter is that the German method tends in the long run to defeat itself. For this German method consists of bilateral agreements under which other countries are likely to find that the credits they have amassed in Germany through the sale of their products at a price perhaps above the world market are "frozen," and that they can avert outright loss only by consenting to take German goods which they may not need or do not want. Once bitten, it frequently happens that they are twice shy.

The German method may indeed succeed for a time in disorganizing other countries' commerce and force them to take protective measures. But that it is falling short of Germany's own expectations is clear enough from the record.

MEXICO WILL FETE BATISTA LAVISHLY

Ten-Day Entertainment Is to Include Dinners, Parades and Public Works Trips

CUBAN WILL ARRIVE TODAY

Some Quarters Believe Visit Is to Bolster the Mexican Position in Oil Parleys

By RAYMOND DANIELL

Wireless to THE NEW YORK TIMES.

MEXICO CITY, Feb. 1.—Political differences and economic troubles were thrust into the background tonight as Colonel Fulgencio Batista, the "strong man" of Cuba, approached these shores on a mission of good-will. A sort of ten-day fiesta has been planned for the visit, with state dinners, parades and bull-fights in his honor.

In a small way the reception plans are reminiscent of the visit Chancellor Adolf Hitler of Germany made to Premier Benito Mussolini of Italy last Fall, and in some quarters there is considerable speculation on what is behind all the fanfare.

Cuban-Mexican trade relations hitherto have been unimportant, but it is pointed out that a large part of Colonel Batista's stay will be spent inspecting public works and other achievements of the Cardenas regime, including the nationalization of expropriated American and British oil properties.

In some quarters it has been suggested that Colonel Batista's visit is designed to bolster the Mexican position in the coming oil negotiations by the appearance of a Mexico City-Havana axis.

Ready to Listen to Proposals

Before leaving Havana aboard the liner Mexico, which is due at Veracruz tomorrow, Colonel Batista was quoted as saying that he was not coming to make a treaty, but was willing to listen to propositions Mexican officials might make.

A spokesman for the Mexican Foreign Office denied today that the visit of the Cuban Army head had more than apparent significance, asserting that it was merely a gesture of friendship between the two Republics.

As in the United States last November, Colonel Batista, as the head of the Cuban Army, will be welcomed with the honors of a major general. He will be met at the harbor of Veracruz by a flotilla of gunboats and a squadron of planes, and after appropriate ceremonies will be brought to the capital aboard the olive-colored private train of President Lazaro Cardenas.

Colonel Ignacio Beteta, head of the Federal Physical Education Department and brother of Ramon Beteta, Under-Secretary of Foreign Relations, has gone to the seaport to meet the distinguished visitor as the personal representative of the President.

Due in Mexico City Friday, Señor Batista is to lay a wreath on the monument to independence, to be presented to President Cardenas and to attend various State functions. On Sunday he is to see noted matadors slay prize bulls in one of the biggest bull rings in the world and to review a parade of workers.

On Monday he will be the guest of honor at the United States Embassy, to which Ambassador Josephus Daniels has invited all the Ambassadors accredited to the Mexican Government.

ITALY OVERCOMES CENSOR

Wins Czech Pledge of Publicity for Attack on Democracies

12/14

MILAN, Italy, Dec. 13 (AP).—Premier Mussolini's newspaper, Popolo d'Italia, reported in a Prague dispatch today that Italy had protested officially to Czecho-Slovakia against the failure of Czecho-Slovak newspapers to reprint a piece of fictitious dialogue that the Premier himself is believed to have written.

The article, entitled "Dialogue on the Thames," appeared in the newspaper Dec. 8. It depicted former President Eduard Benes of Czecho-Slovakia and the defeated Emperor Haile Selassie of Ethiopia as lamenting the fact that they had been ruined because they had relied on assistance from the democratic powers against the totalitarian States.

The dispatch today said that "it is obvious that an organized boycott of the most authoritative voice of the fascist regime could not go without immediate correction."

The official Italian news agency, Stefani, reported that after the Italian Minister had made a second protest to the Czecho-Slovak Foreign Minister, assurance was given that widest publication of the article in the Czecho-Slovak press would be ordered.

12/14

Reich Writers Stalk Out As Lima Talk Flays Nazis

Special Cable to THE NEW YORK TIMES.

LIMA, Peru, Dec. 13.—Five German correspondents at the Pan-American Conference stalked out of a committee session today to show their displeasure over a speech attacking Germany.

The incident occurred as Dantes Bellegarde of Haiti declared that the Americas could not possibly have anything in common with a nation that had reverted to customs of the Middle Ages and had set man against man, race against race and class against class.

M. Bellegarde is well known for his stirring speeches at League of Nations sessions in Geneva.

ARGENTINE YOUTHS WARN AGAINST U.S.

Hundreds of High School Age Place Placards on Corners Citing 'Yankee Imperialism'

DERIDE ROOSEVELT POLICY

Good-Neighbor Aim Is Called 'a Farce' and 'a Blind'—Hitler Salute Is Used

By The Associated Press.

BUENOS AIRES, Argentina, Dec. 17.—Hundreds of boys of high school and college ages have set themselves the task of arousing Argentina's 12,000,000 people to "the perils of Yankee imperialism."

They are backed by Fascist higher-ups and are trained in the gestures of Chancellor Hitler of Germany and Premier Mussolini of Italy.

Their placards on street corners warn Argentina that President Roosevelt's good neighbor policy is "a farce" and "a blind" and, despite police bans, they attempt to hold meetings in the broad squares of Buenos Aires.

The agitators against the United States are banded together in the Nationalist Youth Alliance, fledgling of the Argentine Civic Legion.

The latter is a Brownshirt movement founded by the late General José Felix Uriburu, who ruled the country as a military dictator from 1930 to 1932.

Argentina has run the gamut from stringent dictatorship to liberal civil rule in the last eight years so that today the Brownshirt movement is a ghost of former times.

Its youthful offshoot is credited by opponents with less than the 500 to 600 members it claims to have, but the Youth Alliance makes considerable noise in Buenos Aires and often is in conflict with other youths who hold meetings of protest against totalitarian regimes o. Europe.

One of the activities of the latter is to tear down posters against "Yankee imperialism" as fast as they are pasted up by the Youth Alliance.

Juan Queralto, 18-year-old alliance president, said today, however, his organization had thousands of such posters and it expected to get them before the public despite the opposition of "the Leftists," as he called the opposition.

Seventy members of the Civil Legion just have commemorated the movement's eighth anniversary with a dinner at which the legion president, Carlos Ribero, assailed democracy and pledged the organization to fight liberalism and communism.

Señor Ribero condemned Argentine participation in the Pan-American Conference in Lima.

Members of the Youth Alliance wear no uniform shirts since a government decree forbade their use.

But they still greet each other and salute their leaders with the outstretched arm of the German Nazis, denounce communism, and speak threateningly of "a day of reckoning" for Argentine Jews.

BRAZIL RESENTS ATTACKS

Press Replies to Critics of U. S. Solidarity Policy at Lima

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, Dec. 13.—Germany and Italy are continuing in radio broadcasts and press dispatches printed here to attack the United States as the Lima conference progresses. They warn that "Yankee imperialism is motivated by mercenary economic considerations."

The Brazilian press expresses wonder at the inability of Europeans to understand American psychology. It warns that the totalitarian nations' immigrants in America cannot expect special status as racial minorities.

Foreign Minister Oswaldo Aranha declared today that what Brazil sought at Lima was a formula for American unity if and when there was an actual threat of aggression by extracontinental States.

"Had not Brazil revived the motion at Lima, it might have been interpreted as a retreat," he declared, referring to the fact that Brazil offered a similar resolution at the Buenos Aires conference in 1936.

NAZIS CONFIDENT ON TRADE

Weekly Sees Good Prospects for Reich in Latin America

12/23/38

BERLIN, Dec. 22 (AP).—The Deutsche Volkswirtschaft, economic weekly, declared today that "German foreign trade can look forward to future development in Latin America with confidence."

The magazine came to this conclusion after a lengthy review of relations between the United States and South America since 1933, discussing the results of "dollar diplomacy," the Good Neighboor policy and "efforts to establish a pan-American bloc" against Germany and other authoritarian States.

Germany, not the United States, it said, offers Latin American the best opportunities.

"Though the United States may strive ever so much to be a factor or order and the determining center of power for the entire Latin-American continent," the magazine declared, "the prospects for success of this plan are not great."

JAPANESE SEE PARALLEL

Liken Our Policy in Latin America to Theirs in East Asia

12-14

Wireless to THE NEW YORK TIMES.

TOKYO, Dec. 13.—Commenting on Secretary of State Cordell Hull's speech at Lima, Peru, the newspaper Asahi describes it as "pouring the old wine of the Monroe Doctrine into new bottles."

Mr. Hull, it points out, emphasized the necessity that all American nations bind themselves together against the totalitarian States. Just as Japan has seized the China incident as an opportunity to try to establish an East Asian cooperative structure,' linking Japan, Manchukuo and China, so the United States is desirous of establishing a cooperative structure of American nations under her leadership.

"It is natural that the United States, sensing a menace in the new situation, should adopt Pan-American policy that indicates the economic evolution of the Monroe Doctrine. But we cannot understand why the United States does not sympathize with Japan's efforts to erect a cooperative East Asian structure."

The newspaper Nichi Nichi notes Mr. Hull's "stinging denunciation of despotic forms of government," but it thinks it is the economic advance of Germany and Italy that the United States fears.

THIS PAGE IS DECLASSIFIED IAW EO 13526

ANTI-U. S. RUMORS DENIED BY ARANHA

Foreign Propaganda Is Called 'Absurd, Childish, Stupid' by Brazilian Minister

NO SECRET CLAUSE IN PACT

American Motives Defended as Our Policy Is Ascribed to Generosity and Wisdom

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, March 25.—Foreign Minister Oswaldo Aranha disclosed today that foreign propaganda designed to discredit the United States in Brazil had been active during his recent visit to Washington. He called the rumors that it evoked "absurd, childish and stupid."

It had been insinuated here that the United States, in the course of Dr. Aranha's conversations, had asked Brazil for a territorial concession on the Amazon. It was asserted that the agreement reached would benefit the United States and not Brazil. The report had also been circulated that the United States had asked Brazil to cease trading with Germany altogether and that it had been demanded that Brazil cease planting cotton.

Finally, the rumor was spread that there was a secret clause in the Washington agreement referring to naval bases for the United States in Brazilian territory.

Dr. Aranha took occasion to contradict all these rumors at the same time that President Getulio Vargas was making a renewed attack upon the attempt to bring foreign ideologies into Brazil.

Dr. Aranha first of all made a vigorous defense of the motives of the United States. By helping Brazil, he declared, the United States was following a new policy of comprehension based primarily on the Good Neighbor idea. The United States had become aware, he said, that as the continent's richest nation, it could help the development of the resources of the Latin-American countries and thus bolster Pan-Americanism.

Such a policy, he declared, tends to create good-will and real continental solidarity. Moreover, he added, it should help to defeat foreign inroads in Latin America, since their method of approach is usually economic rather than political.

Brazil, he pointed out, had obtained credits in the United States primarily to liquidate frozen American credits here. This was a transaction strictly between governments and a moderate rate of interest was agreed upon and no guarantees from Brazil were exacted. The gesture was generous, the Foreign Minister observed, because the United States ordinarily gives Brazil a favorable trade balance.

The United States, Mr. Aranha continued, could have imitated the policy of some other nations and have blocked dollars at home to collect the amounts frozen here and then have remitted to Brazil whatever balance was left. Instead, he asserted, the United States placed at the disposal of Brazil a credit of $50,000,000 to be used as a ballast for the Central Bank.

There were no strings on this transaction, he insisted. Brazil could continue to plant cotton.

The press took up this idea immediately and commented that a sovereign nation could continue trading in Washington in any case. It was pointed out, also, that there was strong opposition in the United States to the idea of secret treaties.

On the question of the Brazilian debt to the United States, Dr. Aranha repeated that Brazil wished to pay, and not to repudiate, her obligations. Up to this point, he said, it had been impossible, but now the greater economic development that is forecast brings Brazil into line to pay up. To do otherwise, he commented, would be to "lose face."

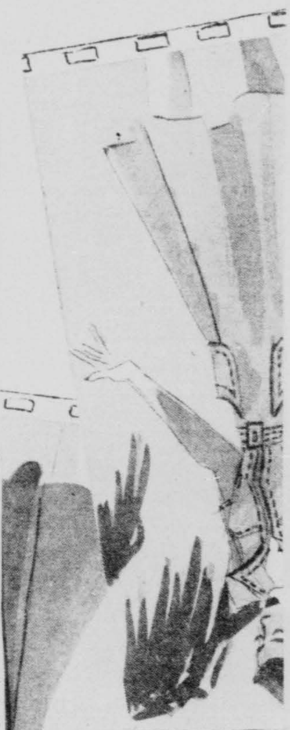
Nothing was said, he insisted, in the course of the Washington conversations about Brazil's internal affairs. The discussion centered solely upon economic matters, although naturally the present world unrest was touched upon informally.

What the United States really did, Dr. Aranha declared, was to endow the people of Brazil and their government with an endorsement of honor.

The Foreign Minister has already made an oral report of his mission to President Vargas and is now engaged in writing a formal and detailed account.

President Vargas emphasized yesterday the resistance of Brazil to foreign political ideologies. In addressing the generals of the army he declared that Brazil would not tolerate ideologies foreign to Brazilian tradition and inimical to Brazilian interests.

While Brazil will remain friendly with all other nations, he emphasized, she will not mix in the internal politics of other countries, and although eschewing isolation, will not countenance interference in Brazilian internal affairs by outside powers or organizations.



What is paramount, he said, is that Brazil must be united and ready to defend the American continent. This can be done without hostile action toward those who are willing to respect Brazil's laws.

CHILE HELD BARREN AS SOIL FOR NAZISM

Agents at Work There Find Germans Contented and Apathetic to Politics

LITTLE LATE IMMIGRATION

Most Colonists Are Sons of Original Settlers and Feel Chile's Ties Strongest

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

VALDIVIA, Chile, Jan. 3.—When you start from the Alameda station in Santiago on the southbound night express, you know perfectly well that you are in Chile. But when you look around you next day, here or hereabout, you think for one bewildered moment that you are in Germany.

Instead of churches built in Spanish colcnial style, mixed up with modern off'ce buildings, you see trim villas with freshly painted walls and window-boxes filled with flowers—like enlargements of those toy houses that German toymakers fashion for children all over the world.

Instead of liquid Spanish greetings from Chilean swains to Chilean señoritas, you hear a fat individual, grunt "Wie gehts, Herr Schultze?" and another mutter, "Ach, Herr Schwartz—guten Morgen!"

Out of the train steps a bunchy woman, in a squarely cut dress and squat hat, wearing a big brooch fastened to an antediluvian bodice. She falls into the arms of another, similarly attired.

"Ist es warm in Santiago, Gretchen?" "Ja, es ist sehr warm, Trudchen."

Together they advance on the exit. A little tow-headed girl with most Teutonic blue eyes, a most Teutonic pinafore, and hair braided into two most Teutonic pigtails, watches them solemnly.

Same Scene Often Repeated

It is just like that at station after station served by the southbound express—at Valdivia and Osorno, at Frutillar and Llanquihue and Puerto Varas. Germany wafted 10,000 miles across the ocean! Of course, you also see Chilean "rotos" in their rags, and hear Chilean station masters bawling out orders in Chilean Spanish. But they cannot drown the German no ?.

What tempting material for Chancellor Adolf Hitler, if and when he should decide to follow up Nazi economic penetration of Chile with an intensive drive for Nazi political penetration! As a matter of fact, he has already made some preliminary passes. But he has encountered—and undoubtedly will continue to encounter—obstacles that may easily wreck all his plans.

The temptation to Herr Hitler in south central Chile is obvious. To his impulsive, go-getting nature it must seem like fruit ripe to pluck another word of it as long as I live!"

The ground down here looks so promising to Berlin for Nazification that Nazi agents are already at work in Valdivia and Osorno and points south. Some of the younger element of the population, especially among the few who emigrated from Germany after the war, are keen for Herr Hitler. There is also a certain degree of ferment among older people, caught by the breathless tempo of the Fuehrer's spectacular doings.

There is even grumbling talk of Chile's "German minority" and its rights; and one may hear about the great destiny supposedly in store for Nazi doctrines. But this sort of thing is neither widespread nor deep as yet, and it is seldom correlated with local political issues. If Herr Hitler and Herr Goebbels count on such sporadic manifestations as a basis for the Nazification of Germanic Chile, they certainly seem to be in for bitter disappointment.

No Basis for Discontent

Movements like Hitlerism are built up on defeat and discontent and despair, of which the Germans of Chile know practically nothing. For several generations they have bothered very little with politics, especially foreign politics. They have concentrated on their daily toil, on narrow local interests, on the necessity for wringing from the land enough for food and clothing and shelter, on the urgency of providing for tomorrow.

German colonial domain of the future, lavishly studded with naval bases and airdromes.

After all, Chile's Little Germany is 10,000 miles away from the Wilhelmstrasse. And, in mental outlook, most of its inhabitants are even farther away than that from the bluster and ballyhoo of the Third Reich. Here in Valdivia, the grandson of one of the Teutonic settlers of last century, mockingly raising his arm in the Nazi salute, said to me:

"We haven't time for that sort of thing around here!"

He spoke, I believe, for the majority of his Chilean-German brothers. Herr Hitler has a lot of spade work ahead of him before he can make Nazis out of these people.

This is the thirteenth of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

THIS PAGE IS DECLASSIFIED IAW EO 13526

It is just like that at station after station served by the southbound express—at Valdivia and Osorno, at Frutillar and Llanquihue and Puerto Varas. Germany wafted 10,000 miles across the ocean! Of course, you also see Chilean "rotos" in their rags, and hear Chilean station masters bawling out orders in Chilean Spanish. But they cannot drown the German no[illegible].

What tempting material for Chancellor Adolf Hitler, if and when he should decide to follow up Nazi economic penetration of Chile with an intensive drive for Nazi political penetration! As a matter of fact, he has already made some preliminary passes. But he has encountered—and undoubtedly will continue to encounter—obstacles that may easily wreck all his plans.

The temptation to Herr Hitler in south central Chile is obvious. To his impulsive, go-getting nature it must seem like fruit ripe to pluck for Nazidom.

Here, eighty or ninety years ago a few hundreds of Germans, who had decided to leave home for various reasons (some because, as republicans, they had become mixed up in the events of 1848 and were marked men to the police of the monarchical fatherland), settled with their families in almost untouched, uninhabited solitudes. They built neat towns, turned virgin forest and untilled hill slope into smiling farmland, prospered through industry and thrift, became the most substantial element in the whole region, tucked away money in the bank.

As most of the native Chileans in the vicinity were poor and illiterate laborers, some of them Indians, there was little intermarriage. The German nucleus, its numbers increased hardly at all by subsequent reinforcements from Germany, developed through succeeding generations into a compact, isolated Teutonic community.

"Cowboys Made in Germany"

On the roads around Osorno, a district that is primarily agricultural, and in the villages fringing Southern Chile's enchanting beautiful lakes, well-to-do farmers—Francisco Wiedenhold, Antonio Rudloff, José Adel—may be met riding to town, wearing broad-brimmed hats and bright ponchos and high knee boots—cowboys made in Germany!—on wiry little nags with saddles like those of our West, never losing their essential, unalterable, thick-necked, bristly-haired, grandpa-came-from-Wuerttemberg look.

In Valdivia, the biggest town of Chile's Little Germany, I counted, in a group of notices inserted in newspapers by eleven physicians, one English, one Italian, two Spanish and seven German names. A stroll around Valdivia's pretty main plaza revealed the following: Lehmann's shoe store, the office of Erwin Kleinknecht, Mueller the tailor, Schuetz's department store, Carlos and Max Noelke, druggists; the Deutscher Verein, the Hotel Schild, Adolfo Schwarzenberg's dry-goods emporium, the Bischoff arcade, and the German Transatlantic Bank. A stone's throw away were the Hotel Schuster, the Hotel Haussmann and the Hotel Pelz.

On the waterfront, two blocks distant—Valdivia is attractively situated on a big river a few miles from the Pacific—a diminutive tugboat puffed importantly, trying to live up to its name, Bremen. On the opposite shore rose Anwandtner's brewery, behind a big sign proclaiming the presence of Pilsener. And the Chilean military band, huddled together in the kiosk in the middle of the plaza, played a German song that was immensely popular in Berlin a few years ago, and followed it up with a German overture called "Soldatenleben."

Chileans Take It Calmly

Local Chileans, immersed in this sea of Teutonism, seemed as a rule to be taking it calmly. After all Germans have always been a part of their lives and of the lives of their fathers. But now and then one of them gets fed up with it all; as, for instance, the barber working at a place close to the Valdivia plaza, who growled into the ear of the American whom he was shaving:

"The Chilean Government ought to issue a decree absolutely forbidding everybody in this whole region to speak German! Oh, how sick I am of the German language! I wish I might never have to hear great destiny supposedly in store for Nazi doctrines. But this sort of thing is neither widespread nor deep as yet, and it is seldom correlated with local political issues. If Herr Hitler and Herr Goebbels count on such sporadic manifestations as a basis for the Nazification of Germanic Chile, they certainly seem to be in for bitter disappointment.

No Basis for Discontent

Movements like Hitlerism are built up on defeat and discontent and despair, of which the Germans of Chile know practically nothing. For several generations they have bothered very little with politics, especially foreign politics. They have concentrated on their daily toil, on narrow local interests, on the necessity for wringing from the land enough for food and clothing and shelter, on the urgency of providing for tomorrow.

"If my grandfather earned thirty cents a day," said a German-Chilean of Valdivia, "the daily expenses of the whole family amounted to thirty cents—or no, that's wrong. I take it back—he spent twenty-five cents on himself and his family and put aside five cents."

Such thrifty methods soon gave the newcomers from Germany a pride in their new home; they felt that they had a stake there, that they must do nothing rash to jeopardize the hard-earned fruits of their labor. And, though their essential Germanism persisted—and was handed on to their descendants—they developed a robust belief that they were Chileans. They began more and more to sense a solidarity between themselves and the republic for which they had abandoned the monarchical land of their ancestors. Little by little, the tie that bound them and their families to the old country became a mere sentimental memory of a Germany that was dead, a Germany that had nothing to do with the World War, the early post-war era, or the era of Hitlerism.

A steady stream of new immigrants from the Reich, bringing new ideas and new theories, might have altered the situation. It might conceivably have injected the virus of changing Europe into the sons and grandsons of Chile's transplanted Teutons, who were still reciting the poems of Goethe learned from their grandmothers and still dimly recalling stories told them by their grandfathers of marching with Carl Schurz, back in '48, to bring democracy to Bavaria and Prussia and Saxony. It might, finally, have made the new generation around Valdivia and Osorno forsake the prudent ways of their forebears and plunge into headlong pursuit of the will-o'-the-wisp of Nazi ideology.

But no such stream of immigration came. In all the length and breadth of Germanic Chile those of the inhabitants who were born in Germany are remarkably few; and by no means all of these are militant Nazis.

Only 350 Voted in Plebiscite

Recently, when Hitler held one of his plebiscites, all Germans living in Chile were commanded to vote. The polling-place was a ship moored off Corral, the port of Valdivia, just outside Chilean territorial waters. The total number of sons of the fatherland—from all over those districts of Chile where people of Germanic blood predominate—who went out to that ship to cast their ballots was barely 350.

And here is a detail, observed by an American who was wandering about in those districts last week, that is more significant to him than any amount of voluminous reports and solemn statistics: in the show-windows of bookshops on the main plazas of Osorno and Valdivia, the proprietors of which, one may certainly assume, would not deliberately hurt trade by outraging local public opinion, there was a prominent display of books by Sigmund Freud, Emil Ludwig and—Thomas Mann!

A good guess, it would seem, is that a Nazi bid for political ascendancy in South America, if it comes, will be based not on southern Chile but on southern Brazil. In the latter, Germans and near-Germans are far more numerous. Moreover, Brazil is much nearer Europe than Chile is; and it is also the nearest land on the American Continent to the west coast of Africa, where, in their dreams, Nazi extremists see the German flag flying over a vast ers. Herr Hitler has a lot of spade work ahead of him before he can make Nazis out of these people.

This is the thirteenth of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

BRAZIL ENVOY ASKS UNITY OF AMERICAS IN FACE OF 'DANGER'

Foreign Minister Aranha, Here for Trade Parleys, Fears 'World Civil War'

SCOUTS NAZI 'PENETRATION'

'Old Germans' in Brazil Dislike the New, He Asserts—Welcomed by Hull

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 9.—Oswaldo Aranha, Brazilian Foreign Secretary, was greeted by Secretary Hull and other dignitaries on his arrival this afternoon to confer with President Roosevelt and high officials about problems of mutual interest to the United States and Brazil. These problems are expected to include the international political situation, as well as the improvement of economic interchange between the two countries.

After exchanging expressions of Brazilian-United States friendship with Secretary Hull before a battery of motion-picture cameras, the 45-year-old special envoy, who is one of the most influential friends of the United States in what many regard as a world danger spot, was taken to the Brizilian Embassy. There Mr. Aranha made clear in an interview that he fears the danger of what he terms "an international civil war" in which he said all the Americas must stand. He asserted, however, that there was no danger of civil strife in Brazil of which a foreign power could take advantage.

Emphasizes Clash of Ideas

The emphasis that Mr. Aranha placed on the danger of the current world political situation was regarded as of great interest, in view of persistent rumors that joint defense problems might be discussed in his series of visits here. It has been announced that an attempt will be made to work out exchange and other economic difficulties hampering trade between the United States and Brazil.

"We do not have a menace of war in the old fashion, but of an international civil war, ideas against ideas." Mr. Aranha said in reply to questions. "We are not facing the same situation as in 1914, which was a war of powers, but the danger of a war of ideas."

Observing in this connection that

SCOUTS NAZI 'PENETRATION'

'Old Germans' in Brazil Dislike the New, He Asserts—Welcomed by Hull

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 9.—Oswaldo Aranha, Brazilian Foreign Secretary, was greeted by Secretary Hull and other dignitaries on his arrival this afternoon to confer with President Roosevelt and high officials about problems of mutual interest to the United States and Brazil. These problems are expected to include the international political situation, as well as the improvement of economic interchange between the two countries.

After exchanging expressions of Brazilian-United States friendship with Secretary Hull before a battery of motion-picture cameras, the 45-year-old special envoy, who is one of the most influential friends of the United States in what many regard as a world danger spot, was taken to the Brizilian Embassy.

There [illegible] Mr. Aranha made clear in an interview tha[illegible] he fears the danger of what he terme[illegible] "an international civil war" in whic[illegible] h he said all [illegible] the Americas must stand tog[illegible]

He asserted, however, that there was no danger of civil strife in Brazil of which a foreign power could take advantage.

Emphasizes Clash of Ideas

The emphasis that Mr. Aranha placed on the danger of the current world political situation was regarded as of great interest, in view of persistent rumors that joint defense problems might be discussed in his series of visits here. It has been announced that an attempt will be made to work out exchange and other economic difficulties hampering trade between the United States and Brazil.

"We do not have a menace of war in the old fashion, but of an international civil war, ideas against ideas," Mr. Aranha said in reply to questions. "We are not facing the same situation as in 1914, which was a war of powers, but the danger of a war of ideas."

Observing in this connection that **Germany, Italy and Japan had one ideology, the Foreign Minister de**clared that in case of an international conflagration "Brazil will fight only for this continent without obligation to any European power; Brazil will do what it always has done—keep away from any entanglements in Europe and Asia."

Asks Our Position

Asked if that meant Brazil would stand with the United States in case of trouble Mr. Aranha countered by asking, "Are you sure if an American country is attacked the United States will fight for that country? I know what we will do. I would like to know what you will do."

Later Mr. Aranha declared that "the world is creating so many problems that I do not know just what President Roosevelt will talk about, but we will have to establish real cooperation between the two countries.

"We, the United States and Brazil," he continued, "are on the same side of the river and should coöperate in all matters. The United States and Brazil look to the future with the same ideas and same hopes."

Questioned about the possibility of a Brazilian civil war, with other countries taking sides as in the case of Spain, Mr. Aranha declared that this was "impossible" since the

SAN JOSE, Costa Rica, Feb. 9.—The program for the entertainment of the officers and men of the Italian cruiser Duca [illegible] Aosta was canceled suddenly today and the visitors left for Limon by a special train to join their ship. They received orders from Italy to leave immediately and join Admiral Eduardo Somigli and the cruiser Eugenio di Savoia at Cristobal and return to Italy without delay.

The Eugenio di Savoia was an route to Venezuela, but the cruiser **is returning to Cristobal. It is be**lieved that possible difficulties in the Balearics and the critical situation in Spain are the reasons for recalling the cruisers from their good-will cruise.

The ships had planned, after a visit to Venezuela, to return to Panama and then proceed to California and thence to the Far East to visit Japan. Their visit here aroused the antagonism of liberal elements, who were restrained by the police. However, they circulated thousands of circulars in big type reading: "Viva Roosevelt," after flysheets attacking the Italians had been confiscated.

Cruiser's Visit Canceled

Special Cable to THE NEW YORK TIMES.

It was understood that the cruiser will continue to La Guaira to await the Duca d'Aosta which is visiting Costa Rica.

Mexico Extends Greetings

Wireless to THE NEW YORK TIMES.

MEXICO CITY, Feb. 9.—Orders were issued here today to extend

fraternal greetings to the two Italian cruisers that have received permission to stop at Manzanillo, Acapulco or Mazatlan on the Pacific Coast after their visit to Guatemala.

The Italian colony here is hopeful that the ships will put in at comparatively near-by Acapulco so they can see the ships. The cruisers are stopping, it was said, solely for provisioning and the crews will not have leave to visit Mexico City.

Members of the Mexican labor organization, C. T. M., were ordered to pay their respects to the visitors at the port selected by wearing black arm bands.

Round-the World Trip Planned

The cruise of the Eugenio di Savoia and the Duca d'Aosta was originally planned last July as a round-the-world trip "to demonstrate Italy's naval strength." In September, the cruise was cancelled because of the gravity of the international situation. After the Munich Pact the trip was carried through as a "good-will tour."

The ships went first to Brazil, where, leaving Rio de Janeiro just before Christmas, the Duca d'Aosta ran aground on a sand bar at the entrance of the harbor of Rio Grande Do Sul. She was refloated and sailed for Montevideo, where the first of the various disturbances are reported to have occurred, on Dec. 23. Sixty sailors of the Duca d'Aosta fought cafe crowds who had objected to their Fascist salutes, and in the end were rescued by the police.

The ships reached Chile just after New Year's, then went to Callao, Peru. In Ecuador a hostile demonstration of students was prevented by the government, and a group of Communists stoned a reception given for the Italian crews.

At Panama anti-Italian demonstrators last Saturday pelted an automobile carrying Italo Capanni, the Italian Minister, and Admiral Eduardo Somigli with eggs and vegetables as they were driving to visit President Juan Arosemena. Admiral Somigli is commander of the two ships.

The disturbances occurred two declared that Panama "might have to become Germany's and Italy's defensive frontier."

The cruisers are 8,500 tons each and have crews of about 550 and eight 6-inch guns. The Savoia was completed in 1936 and the Duca in 1935.

U.S. ASKED TO FIGHT FASCISM IN MEXICO

Totalitarian Powers Seek to Isolate Us From Americas, Lombardo Toledano Warns

'INTERFERENCE' RULED OUT

Labor Leader Says We Should Let His Country Follow Own Path as Aid to Democracy

By RAYMOND DANIELL

Wireless to THE NEW YORK TIMES.

MEXICO CITY, Feb. 9.—The interest of European totalitarian powers in Mexico and other Latin-American countries is political more than economic and is designed to create a diplomatic schism between the United States and the small democracies of the Western Hemisphere, according to Vicinte Lombardo Toledano, general secretary of the powerful Confederation of Mexican Workers.

He said in an interview yesterday that agitation by business interests here and in the United States and Britain for intervention in the controversy over oil and land expropriations was playing into the hands of reactionary elements here who were seeking an opportunity to overthrow a democratic regime and substitute a Rightist dictatorship sympathetic with Nazi Germany, Fascist Italy and militaristic Japan.

The interview was held in Señor Lombardo Toledano's office in the Mexican Labor University, round the corner from the Foreign Office. The walls of the office were decorated only with a picture of Lenin and a banner of the university, of which the 42-year-old organizer, who is known as the best spellbinder in the country, is general director.

Times Wide World

BRAZIL'S FOREIGN MINISTER GREETED BY HULL

Oswaldo Aranha with the Secretary of State in Washington yesterday

Important Section of Party

Señor Lombardo Toledano's 600,000 to 1,000,000 followers form an important part of the Mexican Revolutionary party of President Lazaro Cardenas and may prove to be a decisive factor in the coming Mexican election. An army of peasants, office holders and intellectuals sympathetic to the expropriation policies make up the rest of the party support.

The labor leader is not a member of the Communist party, but he has made several visits to Soviet Russia, returning to Mexico much impressed by what has been accomplished there. He attended the 1934 session of the Communist International in Moscow with Hernan Laborde, general secretary of the Communist party of Mexico.

A former lawyer and professor at the University of Mexico, Señor Lombardo Toledano became connected with the labor movement in 1921. He began organizing the C. T. M., as his labor movement is popularly known, in 1934 after President Cardenas took office and decided too much power rested in the hands of the army.

Señor Lombardo Toledano is not [...] litical orbit of the Rome-Berlin axis. Left to develop according to her own needs and desires, he said, Mexico would remain "democratic" and a good customer and friend of the United States.

"It is unquestionable," he said, "that the Fascist danger here rests not entirely upon internal conditions but upon international relations, which tie up one country with another. I believe, for instance, that if the United States were to turn Fascist, it would be difficult for Latin-American democracy to continue to exist.

"As a consequence, the danger of fascism is not centered in one country but is a continental peril that must be met as a continental problem."

Reminded that many persons both in and out of Mexico regard his organization and the present Administration as communistic, Señor Lombardo Toledano smiled and said that many citizens of the United States held the same views of President Roosevelt, the New Deal and the C. I. O. and its founder, John L. Lewis. There are many parallels, he said, between the Mexican and the United States political and labor situation.

Possible Danger Is Cited

As in the United States, he declared, "reactionary" elements opposed to the Administration have failed through a lack of popular support to defeat it. However, he asserted, these forces unquestionably could succeed in Mexico if they effected a coalition with foreign elements favoring a Rightist dictatorship.

"It is not only the Nazi-Fascist countries that could bring about a change in Mexican political ideology," he continued, "but the democ- [...] his organization was undertaking a crusade "to foster the spirit of democracy" throughout the Americas. He asserted that now, with Europe facing a period of crisis, was "the time for real Pan-Americanism to make itself felt in the New World."

Forces in the United States hostile to the Mexican "New Deal," he said, should realize that a prosperous Mexico with a widely distributed buying power would be an important market for the industrial products of the United States.

"Some naive persons in the United States," Señor Lombardo Toledano continued, 'believe that totalitarianism is compatible economically with democracy. They should disabuse their minds. No matter what the extent of the trade developed by Rome and Berlin in Latin America, the totalitarian States will not divide with business men in the democracies."

Señor Lombardo Toledano revealed that he had called a conference of leaders of his organization for Feb. 20 to discuss the Presidential situation in view of the forthcoming election campaign. At that gathering the candidacies of Generals Manuel Avila Camacho, Francisco Mugica and Rafael Sanchez Tapia will be discussed, but it is not certain that a final decision will be made. Sentiment in labor quarters is believed to favor General Avila Camacho.

Peasant Members to Meet

Peasant members of the Revolutionary party are planning their own conclave to select a candidate. They will meet at San Luis Potosi this month also. The army has not yet made clear its choice.

Besides Señor Lombardo Toledano's C. T. M. there are in Mexico two other labor organi-ations, more conservative in politics and less im- [...] in the event of a crisis, [...] is scoffed at in official quart[...]

Military Training Ordered

However, orders have been issued by Señor Lombardo Toledano for all members of his organization to undergo military training. The object of this, he said in the interview, is to have well-trained units participate in the show of strength in the May Day parade. The C. T. M. already has several uniformed military units, which drill with wooden guns.

At the same time that the order for the military drill was issued the government announced that the training of peasants now proceeding would guarantee a trained reserve of 200,000 in three or four years. The standing army now numbers about 70,000, with 40,000 in the Reserve Corps.

When Señor Lombardo Toledano was questioned about the military training of organized workers, it was pointed out that the training of Spanish workers proved a great help to the Loyalists. He smiled and said:

"We have learned many lessons from Spain."

Señor Lombardo Toledano, who has just returned from Cuba, asserted that he had found a great feeling of solidarity between Cuban and Mexican workers. Employes of oil companies in Cuba, he said, signed an agreement of mutual assistance with Mexican workers, promising to use all the pressure and influence possible to induce their employers to give preference to imports of Mexican oil.

... An army of peasants, office holders and intellectuals sympathetic to the expropriation policies make up the rest of the party support.

The labor leader is not a member of the Communist party, but he has made several visits to Soviet Russia, returning to Mexico much impressed by what has been accomplished there. He attended the 1934 session of the Communist International in Moscow with Hernan Laborde, general secretary of the Communist party of Mexico.

A former lawyer and professor at the University of Mexico, Señor Lombardo Toledano became connected with the labor movement in 1921. He began organizing the C. T. M., as his labor movement is popularly known, **in 1934 after President Cardenas took office and decided too much power rested in the hands of the army.**

Señor Lombardo Toledano is not regarded as a profound student of economics or finance, but he is a shrewd politician with a dynamic personality. To conserve energy for his cause he has given up smoking and he drinks sparingly. He lives modestly in a small house here with his wife and three children. He is slight of stature and has coal-black hair with an almost unnoticeable streak of white. He speaks scarcely any English.

Warns on "Interference"

Discussing the foreign embargo against oil from expropriated wells in Mexico and the agitation for ending silver purchases by the United States, Señor Lombardo Toledano said that this kind of "interference in Mexican domestic affairs" was likely to force the country more and more into the economic and po-... istration as communistic, Señor Lombardo Toledano smiled and said that many citizens of the United States held the same views of President Roosevelt, the New Deal and the C. I. O. and its founder, John L. Lewis. There are many parallels, he said, between the Mexican and the United States political and labor situation.

Possible Danger Is Cited

As in the United States, he declared, "reactionary" elements opposed to the Administration have failed through a lack of popular support to defeat it. However, he asserted, these forces unquestionably could succeed in Mexico if they effected a coalition with foreign elements favoring a Rightist dictatorship.

"It is not only the Nazi-Fascist countries that could bring about a change in Mexican political ideology," he continued, "but the democracies, like France, England and the United States, if they tried to suppress democratic development in Mexico, would make it possible for internal forces to bring about changes. If the democratic nations joined, consciously or unconsciously, with the reactionary domestic elements, they might bring about serious changes.

"It is obvious that Fascist penetration in Mexico and other countries of Central and South America is not primarily economic in its aim but that it is of political significance designed to isolate the United States from the rest of Latin America. One can say that there is hardly a country in Latin America that is not a subject of discreet penetration, and of this the United States is only lately aware."

Señor Lombardo Toledano said ... Señor Lombardo Toledano revealed that he had called a conference of leaders of his organization for Feb. 20 to discuss the Presidential situation in view of the forthcoming election campaign. At that gathering the candidacies of Generals Manuel Avila Camacho, Francisco Mugica and Rafael Sanchez Tapia will be discussed, but it is not certain that a final decision will be made. Sentiment in labor quarters is believed to favor General Avila Camacho.

Peasant Members to Meet

Peasant members of the Revolutionary party are planning their own conclave to select a candidate. They will meet at San Luis Potosi this month also. The army has not yet made clear its choice.

Besides Señor Lombardo Toledano's C. T. M. there are in Mexico two other labor organizations, more conservative in politics and less important in numbers. They are the General Federation of Workers, claiming 200,000 members, and the Confederation of Regional Workers of Mexico, claiming 100,000 members. They are expected to lean to more conservative candidates than have announced themselves as yet, although it is not impossible that General Sanchez Tapia will receive some of their support.

Rumors have been current in Mexico City since election talk began to simmer that the army and the Lombardo Toledano organization might split in the election, but as yet there is no tangible evidence to bear this out. The opposition to President Cardenas has hinted that the reason for offering a refuge to veterans of the Spanish Loyalist International Brigade was to have a nucleus to lead organized workers

---

BRAZIL ENVOY ASKS UNITY OF AMERICAS

Continued From Page One

Brabilians were of Portuguese extraction and not uncompromising, as he said the people of Spain were. He added that the "old Germans" of Brazil do not like the "new Germans," and that half the Germans in Brazil were Catholics who were opposed to what he described as modern German "paganism." The Foreign Minister added that the German part of the population "has been and will be very good Brazilians."

Have to Fear Germany

"We don't fear anything in Brazil, but all friendly people have to fear Germany," he later remarked cryptically.

Mr. Aranha said Brazil would welcome financial help if it should come its way, but that if it had to do so, his country could get along without that help. He remarked that everything possible should be done to stimulate United States-Brazilian trade but was not specific as to what measures would be necessary to accomplish this.

Referring to articles in the European and Latin American press voicing suspicion about his visit to the United States, including one he said was published in Nazi Field Marshal Goering's newspaper to the effect that there was a plan for establishing a Pan-American dollar, Mr. Aranha said:

"I cannot understand how these countries can worry. This is just a friendly visit between two countries. It's just like England and Italy, Germany and France getting together for reasons they don't know about beforehand."

Would Not Hurst Any Country

He stressed that Brazil did not want "to hurt any country," indicating that there was no move under consideration for eliminating Brazil's trade with European countries.

He said that the United Staes' unfavorable trade balance with Brazil was being constantly reduced and that it was now only about $30,000,000 annually. He added that Brazil bought American sewing machines in Canada and American oil in other countries and that this adverse trade balance was not as heavy, in fact, as it looked.

Some American merchants in Brazil have voiced the opinion that the United States should establish a quota system for Brazil like that on Cuban sugar, in order to promote Brazilian buying in this country.

In greeting Mr. Aranha Secretary Hull said, in part:

"I desire to welcome you back to our country. I say back to our country because you spent some time here as Ambassador and have the warm respect and admiration of the American people."

The Secretary referred to the friendship of the United States and Brazil "throughout the centuries" and of the mutual desire for "commerce and peace" and of the "common welfare and problems" of the two countries.

Mr. Aranha was accompanied on his mission by Mr. Marcos de Sousa Dantas, in charge of exchange control of the Bank of Brazil, and Messrs. Luis Simoes Lopez, Joao Carlos Muniz and Sergio de Lima e Silva of the Brazilian Foreign Office.

Among those who greeted Mr. Aranha here at the station were Under-Secretary of State Sumner Welles, President Roosevelt's naval aide, Captain Daniel Callahan; Stanley Woodward, assistant chief of Protocol of the State Department; Ellis Briggs, acting chief of the State Department Division of American Republics; Jefferson Caffery, United States Ambassador to Brazil, and Leo S. Rowe, secretary of the Pan American Union.

George T. Summerlin, chief of the State Department Division of Protocol, met Mr. Aranha when he debarked in New York this morning and accompanied him by train to Washington.

Cotton Parley a Possibility

WASHINGTON, Feb. 9.—In connection with the talk of possible credits to Brazil, it is understood that country would agree to resume payments on her foreign indebtedness, including many millions of dollars in bonds held here.

Administration officials will not negotiate this point with Dr. Oswaldo Aranha, since the State Department maintains the viewpoint that it does not negotiate for the payment of indebtedness to private individuals, but it is expected the Foreign Bondholders Protective Association will talk it over with Aranha during his visit.

Out of the conversations also may come a call for a world conference on cotton marketing. Brazil, like the United States, is a large cotton exporter, and officials would like to see some agreement for orderly world marketing of cotton. Secretary of Agriculture Wallace will participate in this phase of the conferences.

The conferences in general are due to follow both of two courses—short-term and long-term improvement in commercial relations between the two nations. Under short-term projects are those for bettering Brazil's currency position and lightening her exchange restrictions. Under the long-term projects are those for the public works program and for the development of the complementary raw materials.

Denies Fascist Trend

Dr. Oswaldo Aranha, Brazilian Minister of Foreign Affairs, said on arriving here yesterday that he believed the New Deal policies on internal problems of the United States should be extended to the field of international relations to meet the "dynamic" countries that are intensively pushing their world markets.

He characterized our attitude abroad as one of laissez faire, and urged the country to apply the same "philosophy of dynamism" that renders its domestic programs so outstanding today. He said he was referring to a broadening of spending.

Arriving on the Holland-America liner Nieuw Amsterdam at the invitation of President Roosevelt for a general discussion of matters affecting the welfare of the two nations, Dr. Aranha said the countries were devoted to "common ideals that cannot fail," and that the coming talks were being viewed with needless alarm by suspicious nations.

Hate and suspicion achieve nothing between nations, Dr. Aranha said, emphasizing frequently the Brazilian devotion to ideals of "solidarity in the Americas" and to the principles of freedom and open discussion "between friends."

"No Reserve" on Brazil's Part

He promised that in all discussions on matters about the relationship of the two nations there would be "no reserve" on the part of Brazil.

He chuckled at the suggestion of totalitarian ideologies creeping into South American nations and recalled in this connection "the storm you made about Brazil some time ago.

"No leader is working more against the extremes of left and right than our President, Getulio Vargas," he said. "We are not going Fascist and we are not going Communist. We are just going to be ourselves. South America cannot have the same governments; we have different conditions."

As to the subject matter of the Washington conference, Dr. Aranha confessed he had no idea what topics would be brought up.

"I was invited to come to this country, where Brazilians may always feel that they are at home," he said. "And when you are invited to a man's house you do not know of the food you are going to eat or how long you may remain. Naturally, we will talk about our common interests, and we will say what we think. We are going to adjust the clocks—set our timepieces together.

Meeting of Two Friends

"We will have no reserve on any matter. We are conscious of our responsibilities and our position, and I am convinced that these talks will be a new demonstration of our similar convictions and ideals.

"What we must all remember is that it is not the past that matters, but the way you look forward.

"The nations that are suspicious of each other are trying to meet and talk of non-aggression, but this meeting is one of two friends. I feel that Mr. Roosevelt, in inviting me, wishes to establish the best way of cooperation between us, and to enforce further what we are doing in the Americas and what we did at the Lima conference."

Dr. Aranha said Brazil was not seeking and would not seek a loan in the United States. He was then asked if the country might establish a central banking system.

"Brazil is trying to equip herself economically in all ways," he replied. "Before the crisis all the young countries were doing this with investments. After the crash we struggled along with our own capital and resources.

"What Brazil needs is the cooperation of an industrial country with technique and capital, and we, naturally, would like to discuss or, better, to explain our needs. The Vargas government will build up Brazil economically, given your friendly cooperation."

SALVADOR SEIZES SCORES AS REBELS

Many Army Officers as Well as Civilians Are Reported Held in Revolt Threat

EXECUTIONS ARE RUMORED

Government Says Foreigners Do Not Participate in the Politics of the Country

Special Cable to THE NEW YORK TIMES.

COLON, C. Z., Jan. 19.—El Salvador's threatened revolt was promoted by certain former army officers together with younger active officers and civilians opposed to the present government, according to information brought here and believed to be reliable.

Uncomfirmed reports indicate that twenty-five army officers, with the grades of captain and lieutenant, and sixty civilians have been imprisoned. Those arrested are being severely questioned, and there is a possibility of a purge in the army and among civilians who are opposed to the continuance of General Maximiliano Hernandez Martinez in the Presidency.

There are rumors that some officers have already faced firing squads.

Colonel Reported Held

Although there has been no report on the leadership of the proposed revolt it is said that Colonel José Asencio Menendez, former Secretary of War and a Presidential aspirant, is being held incommunicado and that General Enrique Leitzelar has been deported to Nicaragua.

It is reported that Colonel Felipe Calderon is resisting arrest equipped with two automatic pistols, and that he is determined to die fighting

COLON, C. Z., Jan. 19.—El Salvador's threatened revolt was promoted by certain former army officers together with younger active officers and civilians opposed to the present government, according to information brought here and believed to be reliable.

THIS PAC

Uncomfirmed reports indicate that twenty-five army officers, with the grades of captain and lieutenant, and sixty civilians have been imprisoned. Those arrested are being severely questioned, and there is a possibility of a purge in the army and among civilians who are opposed to the continuance of General Maximiliano Hernandez Martinez in the Presidency.

There are rumors that some officers have already faced firing squads.

Colonel Reported Held

Although there has been no report on the leadership of the proposed revolt it is said that Colonel José Asencio Menendez, former Secretary of War and a Presidential aspirant, is being held incommunicado and that General Enrique Leitzelar has been deported to Nicaragua.

It is reported that Colonel Felipe Calderon is resisting arrest equipped with two automatic pistols, and that he is determined to die fighting rather than surrender or be captured. He is said to be barricaded in a building. When offered guarantees he replied, it is reported, that common policemen should not be sent to arrest a colonel but that the man to arrest should be an Under-Secretary of War or at least the Director General of the Police.

While it is not known whether cadets in the military academy are involved, it is said that when they were deprived of ammunition for their rifles they threw them on the ground and refused to pick them up at the orders of the German General Eberhard Bonstedt, who is in command of the school.

Nevertheless, it is reported that life appears normal in the capital and that the government broadcasting stations are sending out gay music with a song saying that General Martinez is the ideal President.

Denies a Re-Election

Wireless to THE NEW YORK TIMES.

SAN SALVADOR, El Salvador, Jan. 19.—The government press bureau issued a statement today in regard to the extension of the term of President Maximiliano Hernandez Martinez as reported in THE NEW YORK TIMES Jan. 5.

The bureau says President Martinez was not re-elected, but that the Constitutional Congress by the express will of the people decided upon a new constitutional regime and continued the President in office for a term of six years.

The statement says the government maintains friendly relations with the people and governments of Germany, Japan, Italy and Spain on the same terms as with other civilized people of the world and strictly within the canons of international and human rights. It says the government of El Salvador is historically jealous of its prestige and of the national sovereignty, and repudiates, as it always and always will, the statement asserts, foreign intervention in its public activities, especially political matters.

It asserts it is not true that foreigners have actually participated in El Salvador's political affairs. It charges as false any assertion that there are foreign instructors in the army and says the only foreigner in the service is General Eberhard

MEXICO PUSHES USE OF FASCIST GOODS

Oil Barter Makes Newsprint From Reich and Rayon From Italy Available at Low Prices

By FRANK L. KLUCKHOHN

Special to THE NEW YORK TIMES.

BROWNSVILLE, Texas, Jan. 18.—The Mexican Government is establishing machinery looking toward the forcing of commercial establishments and shops in Mexico to use German and other fascist goods—goods obtained through the barter of petroleum from expropriated United States and British properties—to the detriment of United States trade.

Meanwhile, under new and larger barter agreements with Germany and Italy, Mexican oil shipments have been stepped up since the first of the year.

The Mexican paper trust already is bringing into Mexico German newsprint obtained by bartering oil, and Mexican newspapers are able to get this paper at a price substantially below the world price.

This arrangement gives both the Mexican Government and the German Government an economic tie with the local press because an arbitrary raising of newsprint prices is capable of financially breaking many Mexican newspapers. Rolls of this paper can be seen by any observer in Mexican newspaper establishments.

Rayon Group Set Up

An association of rayon manufacturers has been set up. Rayon obtained through this organization—under the real control of the Mexican Government—carries an import duty of only 2.90 pesos a kilo [2.2 pounds] compared with a tariff of 4.20 pesos on rayon not imported and distributed by the new organization.

The Mexican Government is to obtain rayon from Italy in exchange for oil—oil that President Lazaro Cardenas, in a press conference last Spring, himself said included products of expropriated properties. The United States formerly obtained most of the substantial Mexican rayon business.

The government, it is understood, intends to follow the same procedure for raw materials and manufactured goods in other industries and some American distributing companies have privately complained to the United States Embassy that the Mexican Government is seeking to force them to obtain blocked marks.

As to the oil shipments, tankers are slipping mysteriously and constantly from Mexican ports, their papers recording that they are sailing for Lands End, England. They do not arrive in England and most of them discharge their cargoes in Hamburg, Germany. From an airplane yesterday, this correspondent saw two of these tankers loading at Tampico on the Mexican East Coast.

7 Ships Off in Fortnight

Despite this and other official subterfuges, it is possible to record that between Jan. 1 and 16 seven ships left Tampico for Germany, under consignment by W. R. Davis of New York, bearing 722,087 barrels of oil from expropriated American and British properties. Other

MEXICO PUSHES USE OF FASCIST GOODS

Continued From Page One

shiploads were consigned to Ernst Jung of Hamburg, who acts as agent for the German Navy. The last two tankers departing were the Scandinavian ships Henning Maersk and Jane Maersk.

Mexican barter exports to Germany in 1939, through Mr. Davis alone, will exceed the total Mexican oil exports for 1938 if the present rate of shipments is continued. At present speed, the $17,000,000 straight barter deal with Germany handled through Mr. Davis should be easily executed.

Shipments of Mexican oil in 1938 totaled 14,560,000 barrels, compared with 24,960,000 in 1937. In addition there are shipments this year for the German and Italian Navies and probably several cargoes for Japan as in 1938.

Although American trade fell from $99,867,000 in the first eleven months of 1937 to $56,000,214 in the same period of 1938, as a result of Mexican official policies, which included drastic tariff increases, until the barter arrangements were made, United States trade has not yet felt the full force of German competition. This is because, while the Mexican Government has established substantial mark, lira and yen credits for oil shipped, merchandise from the Nazi and Fascist countries is only now beginning to seep into Mexico.

Real Loss Not Shown

United States trade figures do not represent the real degree of the American loss of trade either, since business held up in the first three months of 1938 and fell later to less than a third of its former volume.

Within the past two weeks, according to United States Consular reports, the Tampico branch of the Mexican Government Petroleum Administration has canceled American office machinery orders in the belief that German merchandise is now available.

Coincidentally some American automobile distributers in the Mexican capital complain that government orders have been issued that henceforth German trucks are to be purchased for official use. United States companies have until now obtained all this business.

The foregoing information cannot be sent in detail by American correspondents still resident in Mexico City because of their knowledge that disclosure of such details would lead to certain retaliation.

American Sales Fall Off

MEXICO CITY, Jan. 18 (P).—Mexico's oil barter arrangement with Germany has given a tremendous stimulus to trade with the Reich. Several United States business representatives say there has been a sharp fall in their sales, particularly of typewriters, office equipment and optical and scientific instruments in which German articles have strongly competed with those of other countries.

Heavy purchases of irrigation equipment are understood to be planned.

Recently there have been reports that Mexico was trying to sell aski marks (Germany's special foreign trade currency) to certain South American countries. Informed persons said any such deals probably would be opposed by Germany, anxious to protect her own markets and the value of her aski marks.

Other reports said Mexico planned to receive German goods here and then reship them to other countries for sale. Business men said government agencies were seeking to trade German typewriters and similar articles—large quantities of which were said to be in government warehouses—for goods produced locally.

a self-revealing reluctance to surrender the hope that the United States and Britain may not follow diplomatic protests by economic pressure.

Asahi, while cautinoing against the belief that economic pressures may not be enforced, contends they will come slowly. It is inconceivable, in Asahi's opinion, that the two powers are ready to sacrifice all their rights and interests in China. This is an echo of an impulsive threat that is often heard but which is based on a short view.

Those taking this view correctly assume that Japan will be able to destroy foreign interests in China, but ignore the extremely damaging retaliation the foreign powers are able to inflict.

Economic ignorance is widely diffused in the popular press, but officials in their study of the position cannot fail to discover that 70 per cent of Japan's foreign trade outside the "yen bloc" is done with the United States, the British Empire and France.

The democratic countries may be weak in Europe, as the Japanese newspapers never fail to point out, but in the Far East their economic power is very great.

Exception in Press Comment

The exception to the ordinary run of press comment was an editorial in tonight's Japan Times. It declares Japanese opinion regarding the British protest is in the formative stage. While admitting the identity of the British and United States notes, it suggests that the United States is defending existing treaties as a matter of abstract principle, but that the British Government approaches the question as a practical issue.

"Although strongly presented," it says, "the British attitude does not preclude attempts to reach an agreement by negotiation."

The Japanese Foreign Office is rebuked for not making it clear that the "rejuvenation of China can very well be done in an atmosphere of international cooperation since there is room enough for all countries to come in for their share."

The Japan Times, an English newspaper, has little or no influence among Japanese readers but its chairman, a former diplomat and now a member of PaPrliament, often expresses with remarkable fidelity the views of the moderate wing. Its opinions in this matter coincide closely with those of some highly placed civilians who are engaged in carrying out Japan's economic plans in China. Recent Japanese visitors to Shanghai report that the army leaders are becoming disposed to put water in the wine they fermented in the flush of victory at Hankow and Canton.

It would be unpardonable at the present stage to suggest that Japan was prepared to abate her declared policy and it would be foolish to conceal that that policy, as interpreted by the elements in power, aims at making China a Japanese dependency. But there is another school, influential thought not dominant, which holds that Japan's essential needs can be satisfied

$36,726 HURRICANE AID PROVIDED FOR BRONX

Red Cross Gave Relief to 1,100 Victims of Fall Storm

The American Red Cross spent $36,726 in emergency relief and rehabilitation aid to 1,100 Bronx victims of the September hurricane, according to a final report sent yesterday to national headquarters by General Robert C. Davis, executive director of the New York Chapter. The report covered emergency assistance directly after the Sept. 21 storm and rehabilitation aid in the period ended Jan. 1.

The largest item was $16,408 for building repairs, and another $13,355 went for household goods for the affected families. A total of 304 Bronx families applied for relief, and of these 175 owned their own homes. The hurricane and tidal wave damaged 113 homes, destroying six entirely and washing fifty more from their foundations.

The Red Cross helped to restore and rebuild these homes in the area along Long Island Sound from Harding Park on Clason Point to Throgs Neck, Locust Point and Baychester.

Occupational rehabilitation was another item. It accounted for only a small part of the total spent, $562, but played an important part in restoring life to normal. One occupational loss was that of a frankfurter stand swept away by the hurricane. The Red Cross provided a new wagon-stand.

An award was made to a chicken raiser for "live stock," and another beneficiary was an apiarist who made a living selling honey and whose seven swarms of bees were lost. A 76-year-old breeder who lost three litters of pedigreed puppies

CHILE'S 'NEW DEAL' TRIES CLEAN SWEEP

Aguirre Determined to Better Lot of Poor Even if Some Other Classes Are Hurt

PRICE CONTROL IS STARTED

Political Offices, Army, Banks and Educational System Are in Reorganization

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Jan. 15.—Three weeks of Chile's "New Deal" under the recently elected Popular Front government finds the country in a state of psychological uncertainty similar to that which accompanied the initiation of the New Deal in the United States.

Chile, too, has her "forgotten man" and his plight is much worse than that of his namesake of the United States.

President Pedro Aguirre Cerda and his Cabinet members are determined that the plight of Chile's "forgotten man" must be improved immediately. They insist that he must have cheaper food, clothing and housing; that his children must have more and better schooling and at the same time sufficient clothing and substantial food to enable them to apply their minds to their lessons instead of to their hunger.

There is a much wider spread between wealth and poverty in Chile than in the United States, with practically no middle class. It naturally follows, therefore, that any improvement in the standard of living of the masses must be at the cost of the wealthy class, which has ruled Chile since the beginning of its independence.

Since this land-owning class apparently is not willing to cooperate with the government's "New Deal" progmam, President Aguirre is making a clean sweep of all government departments. He is installing completely new personnel that is more in sympathy with the objectives that he has promised his country that his government intends to achieve.

Long Cabinet Sessions

More than twenty objectives have already been decreed at the Cabinet sessions, which have lasted almost all day every day at the Summer capital, Vina del Mar. These include the lowering of the cost of flour, wheat and bread, meat and vegetables.

All pawned tools, sewing machines and other instruments or machines used by the poor in their trades were returned to the owners free of cost. Almost 50,000 such pawn pledges were canceled. Railroad freights on wheat and flour were reduced by 50 per cent. The price of cement was heavily cut and this was accompanied by an announcement that the cost of other streamlined Diesel-driven trains for the State railways. These trains will be the most modern in all South America. This purchase was made in accordance with the already existing "compensating" arrangement by which Chile barters nitrate, copper and other products for German manufactured goods.

The government has ordered the reorganization of the entire educational system to abolish religious influence, curtail the output for the professions and facilitate special instruction along industrial and commercial lines. Fifty professors expelled two years ago for advanced radical teaching have been reinstated.

Commands Reorganized

The high commands of the army, navy and air forces have been completely reorganized. So likewise have been the key positions in the urban police forces.

Also reorganized are the managerial staffs of the Central Bank of Issue, the National Mortgage Bank, the Workers Insurance Bureau, the Customs House, the National Export Board which controls all the country's export trade and also the Exchange Control Commission. All these government entities are now under control of authorities belonging to the parties that supported the Popular Front candidates.

President Aguirre has made a clean sweep of the diplomatic and consular services including a complete reorganization of the Foreign Office. He has announced that he will reduce the number of Ambassadors and Ministers for reasons of economy.

As usually happens when such sweeping reforms are under way, there has been a considerable uncertainty on the Stock Exchange and at other investment centers. Stock likely to be affected by reforms has been weak and there is a tendency to keep capital liquid until the trend of the government's program is more clearly defined.

President Aguirre has announced in public statements that his program does not contemplate any aggressive action toward American and other foreign capital. This, he says, has been of inestimable assistance in developing the country's resources.

In a general way, the program of reforms is designed to increase agricultural and industrial production in all lines. This would lessen the necessity of imports and increase the country's export trade to a point to strengthen the foreign exchange value of the Chilean currency.

Case of Smallpox Holds Siam's Boy King on Liner

Wireless to THE NEW YORK TIMES.

SINGAPORE, Jan. 15.—King Ananda Mahidol, 13-year-old ruler of Siam, was among those spending the night in quarantine here following the discovery of a case of smallpox on the new Danish liner Selandia, on which he is en route back to school in Switzerland.

The Governor of the Straits Settlements, who had arranged to entertain the boy King at a luncheon tomorrow, now must decide whether he will be permitted to land.

EL SALVADOR MOBILIZES

Threat of Revolt Rumored, and New Constitution Is Expected

Special Cable to THE NEW YORK TIMES.

PANAMA, Jan. 15.—The government of El Salvador mobilized the army, the National Guard and the police last Friday to suppress an expected revolution, according to reports brought here today. All troops were concentrated in barracks and forts, all leaves were canceled and before midnight the streets of the capital were patrolled by soldiers armed with machine guns.

It is understood that the Government claims to have received information from its secret service that the revolution was planned for midnight. It is also reported that numerous arrests of suspects were made by the police and some persons were placed under guard in their homes.

Although the concentration of troops is obvious and reports of the revolt common knowledge, nothing has appeared in the Salvadorean press.

The proclamation of a new constitution continuing President Maximiliano H. Martinez in power for six years more is expected soon.

Apparently the danger, if any existed, has passed, as calm was restored yesterday and the people went about their daily tasks.

It is also reported that General Martinez met the American, British and French Ministers, but the nature of their conversations has not been revealed.

and Educational System Are in Reorganization

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Jan. 15.—Three weeks of Chile's "New Deal" under the recently elected Popular Front government finds the country in a state of psychological uncertainty similar to that which accompanied the initiation of the New Deal in the United States.

Chile, too, has her "forgotten man" and his plight is much worse than that of his namesake of the United States.

President Pedro Aguirre Cerda and his Cabinet members are determined that the plight of Chile's "forgotten man" must be improved immediately. They insist that he must have cheaper food, clothing and housing; that his children must have more and better schooling and at the same time sufficient clothing and substantial food to enable them to apply their minds to their lessons instead of to their hunger.

There is a much wider spread between wealth and poverty in Chile than in the United States, with practically no middle class. It naturally follows, therefore, that any improvement in the standard of living of the masses must be at the cost of the wealthy class, which has ruled Chile since the beginning of its independence.

Since this land-owning class apparently is not willing to cooperate with the government's "New Deal" program, President Aguirre is making a clean sweep of all government departments. He is installing completely new personnel that is more in sympathy with the objectives that he has promised his country that his government intends to achieve.

Long Cabinet Sessions

More than twenty objectives have already been decreed at the Cabinet sessions, which have lasted almost all day every day at the Summer capital, Vina del Mar. These include the lowering of the cost of flour, wheat and bread, meat and vegetables.

All pawned tools, sewing machines and other instruments or machines used by the poor in their trades were returned to the owners free of cost. Almost 50,000 such pawn pledges were canceled. Railroad freights on wheat and flour were reduced by 50 per cent. The price of cement was heavily cut and this was accompanied by an announcement that the cost of other construction materials would be similarly reduced.

A nation-wide program of public works has been begun, embracing an expensive system of new highways. The government has announced that it will build 6,000 low-priced workingmen's homes every year during the six years of the administration. These, however, will not be built in large sections that would set off the laboring class as apart from the rest of society.

One of President Aguirre's first acts was to cancel a law passed near the close of President Arturo Alessandri's administration granting land concessions in the Territory of Magellanes. The new government said that these concessions favored certain persons at the expense of the country at large. On the other hand, the government has undertaken a vast program of colonization designed to settle small farmers on arable land and thereby increase agricultural production.

Power Plans Made

Plans have been announced for the electrification of the entire country by the installation of hydroelectric plants on Chile's many mountain-side rivers and harnessing all available waterfalls.

Electric power projects are now in the control of an American-owned company. The government's plan contemplates the furnishing of current free to certain small industries.

The government yesterday placed an order in Germany for twenty streamlined Diesel-driven trains for the State railways. These trains will be the most modern in all South America. This purchase was made in accordance with the already existing "compensating" arrangement by which Chile barters nitrate, copper and other products for German manufactured goods.

The government has ordered the reorganization of the entire educational system to abolish religious influence, curtail the output for the professions and facilitate special instruction along industrial and commercial lines. Fifty professors expelled two years ago for advanced radical teaching have been reinstated.

Commands Reorganized

The high commands of the army, navy and air forces have been completely reorganized. So likewise have been the key positions in the urban police forces.

Also reorganized are the managerial staffs of the Central Bank of Issue, the National Mortgage Bank, the Workers Insurance Bureau, the Customs House, the National Export Board which controls all the country's export trade and also the Exchange Control Commission. MERRY-GO-ROUND

By PEARSON and ALLEN

(Editor's Note—The Brass Ring, good for one free ride on the Washington Merry-Go-Round, has been bestowed on many, but only twice have Drew Pearson and Bob Allen awarded the special honor of Grand Order of the Brass Ring. This, given to those who can ride the Merry-Go-Round yet keep their head and their sense of humor, today is given to Oswaldo Aranha, Foreign Minister of Brazil.)

WASHINGTON. — The arrival of Oswaldo Aranha, Foreign Minister of Brazil, in the United States this week, has more significance than the visit of any other foreign potentate in years unless it be the forthcoming pilgrimage of the King and Queen of Great Britain.

Aranha served for four years as Brazilian ambassador in Washington and was one of the most popular envoys since the days of Jusserand of France. But that is not why his visit is significant.

Nor are conversations regarding trade, foreign exchange, or credits the reason for his visit. These will be discussed; but the real reason goes far deeper.

It goes back to the State Department's recent awakening to the alarming extent to which Nazi-Fascist influence has penetrated in South America. It also gets down to the fact that the United States, despite the "Good Neighbor" policy is not at all popular south of the Rio Grande.

Complacent Cordell Hull hadn't realized these things until he went to the Lima Conference in December. There he had his eyes opened to the fact that Oswaldo Aranha was the one outstanding friend of the United States in the Southern Hemisphere.

This country has other Latin American friends, it is true, but few of the Aranha type who will stand up and fight against any odds for friendship with the United States.

* * *

German Plot

Greatest fight Aranha has made is to keep Nazi influence out of Brazil. And with his return to the USA, a State Department secret can be revealed, namely that Aranha had a lot to do with the recall of the German ambassador from Washington. In fact Aranha played a larger part in this than almost anyone else.

Background of this revelation goes back to last summer when the Integralistas, or Brazilian Nazis, staged a revolt. Afterwards it was discovered that funds for the revolt had come from the Deutsches Amerikanisches Bank in Rio de Janeiro. It had advanced $500,000 for the overthrow of the Brazilian government.

Immediately, the German direc-

this than almost anyone else.

Background of this revelation goes back to last summer when the Integralistas, or Brazilian Nazis, staged a revolt. Afterwards it was discovered that funds for the revolt had come from the Deutsches Amerikanisches Bank in Rio de Janeiro. It had advanced $500,000 for the overthrow of the Brazilian government.

Immediately, the German director of the bank and his two assistants were jailed. This brought a protest from the German Ambassador, Karl Ritter, who demanded of Foreign Minister Aranha that he release the men at once. Aranha reminded Ritter that it was Brazilian law which ruled Brazil, not Nazi.

Ritter became so abusive that Aranha almost lost his diplomatic poise and threw him out.

Later when Ritter returned to Germany for the Nazi party reunion at Nuremberg, Aranha instructed the Brazilian ambassador in Berlin, Jose Muniz de Aragao, to inform the German Foreign Office that Ritter was not to return. However, Aranha was too timid in his statment, or else the Foreign Office deliberately misundersood him. At any rate, Ritter left Hamburg for Rio..

Learning this, Aranha peremptorily informed the German Foreign Office that Ritter would not be received in Rio. So his ship was stopped off the coast of Portugal and Herr Ritter put ashore at Lisbon. Simultaneously Aranha recalled his own ambassador from Berlin.

Washington Headquarters

Behind this drastic action was further discovery by the Brazilian government of Nazi revolutionary attempts in the southern province of Santa Catharina and Rio Grande do Sul. These Aranha traced direcly to the German embassy in Washington. All the evidence pointed to Ambassador Hans Dieckoff as the arch-plotter of revolt in Brazil.

Aranha communicated all his evidence to the State Department and it arrived just as the Nazis began their last persecution of the Jews. So Roosevelt and Acting Secretary of State Welles figured that one way of getting rid of Dieckhoff was to withdraw the American ambassador from Berlin, which would serve both as a protest against Jewish persecution and so arouse Hitler Dieckhoff would be recalled immediately. This was exactly what happened.

Note — Simultaneously, cables were found signed by Dieckhoff, authorizing payments to Italian witnesses against the United States in the Kingsland, N. J., munitions explosion in 1916, which German agents were accused of setting off.

* * *

Cowboy Diplomat

Aranha is a product of the southern Brazil prairies. Born of a wealthy rancher, his nickname is "The Gaucho" (cowboy). Friends accuse him of having been born in the saddle. At any rate, he spent one whole year in the saddle preparing for the revolution in 1930, which put President Vargas in power. As a result of that campaign he still carries a piece of lead in his shoulder, plus four other bullet wounds.

Only 45 years old, into those years Aranha has squeezed two lifetimes. He has studied at the military College of Rio de Janeiro, later graduated in law at the university, and even studied at the swank Ecole des Hautes Etudes Sociales in Paris.

And Aranha, the most consistent and hard-hitting champion of the United States below the Rio Grande, is now given his hour of recognition.

PRESSES AIR LINKS WITH LATIN STATES

Aeronautics Authority Seeks to Offset Penetration by Germans and Italians

BEACONS IN WEST INDIES

South America Will Be a Day Closer to Us in Flying Time, Oswald Ryan Asserts

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 12.—A sound and stable aircraft industry is not only important to commerce, but also is essential to national defense, Oswald Ryan, member of the Civil Aeronautics Authority, declared in a speech broadcast over the NBC network tonight.

Mr. Ryan revealed a CAA program for erecting a string of seven rotating airway beacons through the West Indies, as a move toward improved flying facilities and to bring South America closer to the United States in order to offset German and Italian penetration. He asserted that Germany and Italy had reached maximum production of airplanes for their domestic markets.

Speaking of the need of civil aviation in connection with national defense plans, Mr. Ryan said:

"This is one of the primary lessons which Great Britain and France have recently learned from cruel experience. Yet there can be no stabilized aircraft production in the United States so long as that industry reveals itself as a fever chart with its elevations and depressions running up and down with the presence or absence of national alarm and fear of war.

To Build Up Foreign Markets

"The problem is one of straightening out the curve of that production; it is the problem of creating a stable market. This means not only the stabilization of the domestic demand, it also means the maintenance and further expansion of our important foreign markets.

"Germany and Italy have reached the saturation point in aeronautical production for their domestic markets. Their production already exceeds their domestic, military and civil needs, and the export of German and Italian aircraft has become the essential outlet through which production in those countries is to be maintained.

"There can be no doubt about that in the mind of any one who knows what is going on in South America, and there can be no doubt that their policy has thus far met with considerable success. The fact is already apparent in the tremendous increase of the German and Italian aeronautical exports to Latin America in comparison with our own."

"And, remember," continued Mr. Ryan, "the German and Italian penetration in Latin America is not the spontaneous, natural growth of a free and expanding industry; it is the well-considered thrust of a national program; a program bent upon commercial, cultural and po-

2,000 at Barraquilla, Colombia, Warmly Welcome Vessel

Special Cable to THE NEW YORK TIMES.

BOGOTA, Colombia, Feb. 12.—The Italian cruiser Duca d'Aosta was warmly received at Barranquilla yesterday by 2,000 persons gathered at her pier there. The Colombian and Italian anthems were played.

The commander and high officers of the ship visited the local Governor and sent greetings to President Eduardo Santos. A wreath was deposited on the Bolivar statue.

The Italian Club arranged a reception tonight for the officers of the ship, which will sail at dawn.

Oswald Ryan Asserts

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 12.—A sound and stable aircraft industry is not only important to commerce, but also is essential to national defense, Oswald Ryan, member of the Civil Aeronautics Authority, declared in a speech broadcast over the NBC network tonight.

Mr. Ryan revealed a CAA program for erecting a string of seven rotating airway beacons through the West Indies, as a move toward improved flying facilities and to bring South America closer to the United States in order to offset German and Italian penetration. He asserted that Germany and Italy had reached maximum production of airplanes for their domestic markets.

Speaking of the need of civil aviation in connection with national defense plans, Mr. Ryan said:

"This is one of the primary lessons which Great Britain and France have recently learned from cruel experience. Yet there can be no stabilized aircraft production in the United States so long as that industry reveals itself as a fever chart with its elevations and depressions running up and down with the presence or absence of national alarm and fear of war.

To Build Up Foreign Markets

"The problem is one of straightening out the curve of that production; it is the problem of creating a stable market. This means not only the stabilization of the domestic demand, it also means the maintenance and further expansion of our important foreign markets.

"Germany and Italy have reached the saturation point in aeronautical production for their domestic markets. Their production already exceeds their domestic, military and civil needs, and the export of German and Italian aircraft has become the essential outlet through which production in those countries is to be maintained.

"There can be no doubt about that in the mind of any one who knows what is going on in South America, and there can be no doubt that their policy has thus far met with considerable success. The fact is already apparent in the tremendous increase of the German and Italian aeronautical exports to Latin America in comparison with our own."

"And, remember," continued Mr. Ryan, "the German and Italian penetration in Latin America is not the spontaneous, natural growth of a free and expanding industry; it is the well-considered thrust of a national program; a program bent upon commercial, cultural and political domination, and it is backed by the most modern streamlined propaganda machine the world has ever seen.

"The Civil Aeronautics Authority is fully aware of these facts and their significance. The Authority is now completing a detailed study of all airline operations in Latin America, looking toward the early improvement of our International air services in that hemisphere.

Beacons to Be on U. S. Soil

"There is already included in our 1940 budget a request for funds to erect a string of seven rotating airway beacons through the West Indies, thus making it possible to draw South America one day closer by air to the United States.

"The new lighthouses of the airways will be erected on American-owned soil and will speed up travel time between the United States and South America by enabling our planes to combine their present daylight operations with a small amount of night flying."

More than 500 delegates from all sections of the country will attend the National Aviation Forum here Feb. 20 and 21.

Held under the auspices of the Joint Aviation Council, composed of representatives of the major national aviation associations and sponsored by the National Aeronautic Association, the forum is intended to bring together representatives of more than forty national organizations outside of aviation, including civic, patriotic, fraternal, labor and professional groups "with a common interest in making America first in the air."

JAPAN, REICH MAKE GAINS IN COSTA RICA

Tokyo's Cotton Plantation Is Observed to Be Good for Air Base Near Panama Canal

NAZIS WORK FOR MARKET

Skilled Organization Pushes Purchases of Coffee, to Be Paid For in Aski Marks

By T. R. YBARRA

By Air Mail to THE NEW YORK TIMES.

SAN JOSE, Costa Rica, Feb. 9.—On the Pacific coast of this republic, near the port of Puntarenas, the Japanese have started to grow cotton.

Recently they bought some hundreds of acres of land, at a figure considerably above the market price. They brought from Peru twenty Japanese versed in cotton growing. They gave jobs to a number of Costa Rican workers, at wages considerably above the usual rate. The first crop has been a failure.

Experts insist that the venture cannot possibly yield a profit. Yet the Japanese who are making it, instead of getting discouraged, have just bought more parcels of adjoining land—at a most attractive figure to the sellers.

If, economically speaking, the venture is a washout—as present signs clearly indicate—why are those Japanese staying? That is what many persons down here, among them Americans who are by no means alarmists, are assiduously asking themselves and others.

And, while they ask, two things are uppermost in their minds. First is the thought that those Japanese acres near Puntarenas include what experts consider an absolutely ideal landing place for airplanes; the second is the realization that they are only some 250 miles from the Panama Canal.

This attitude is typical of the misgivings caused by what the totalitarian nations are up to nowadays in Costa Rica, the nearest of Central America's five countries to the Canal Zone, most vital link in our national defense. Maybe the men from Japan are really bent on raising cotton crops and on nothing else—maybe spy-maniacs are grossly maligning them—yet the fact remains that they are being viewed by people here, natives and Americans, with growing suspicion.

"Camouflaged Air Base"

"That so-called Japanese cotton plantation outside Puntarenas is a thinly camouflaged air base," I was told by a man who had seen it. His statement is characteristic of what is passing through the minds of more and more people in Costa Rica—not only with regard to what the Japanese are doing but to German and Italian activities as well.

As usual, the Germans here have the best organization. Whatever their ultimate object may be, they are certainly preparing themselves for it with a persistence and precision of effort that are positively military in efficiency. German cooperation here with the Nazi authorities in Berlin is typical of what is to be found throughout Central America—and, for that matter, throughout much of the rest of Latin America.

The Hitler government works through four agencies: the local German Club, the local Nazi Committee, the German Consulate, and the German school.

The German Club is the principal nucleus. Ever since Hitler came to power, the strongest sort of hints have been given to all members of the German colony here that they are expected to take an active part in club activities. In this city, every German is expected to spend at the club, as a minimum, the equivalent of his earnings for one day of each year. If he does not actually spend it on the premises he is expected to remit it to the club treasury. In this way the club, leading focus of pro-Nazi propaganda, is assured of a pretty large working fund.

Liaison With Gestapo

The Nazi Committee, it is asserted here, works in liaison with the Gestapo, or secret police, of Nazi Germany. It keeps a systematic check on every German resident, exerts pressure on him if he is lukewarm in Nazi sympathies, and, if he stubbornly refuses to take hints, it starts a business and social boycott against him among other Germans.

As a last resort, members of the committee tell him that, if he does not play the Nazi game, his relatives in Germany will suffer. That usually does the trick. As a result of such methods the proportion of local Germans who are genuinely or ostensibly Nazis is calculated at 100 per cent.

German Consuls in Costa Rica (and throughout Central America) are especially active in the commercial field, in which German penetration is registering some spectacular successes. Finally, in German schools here and all over Central America, the Nazis spread propaganda among children of German parentage, who pass it on to their parents and other grown-up relatives and acquaintances.

It all adds up into a smoothly working, interlocking propaganda machine of extraordinary effectiveness. Against it, as local Americans ruefully point out, we have consistently failed to present anything like an aggressive front.

The Italians are not at all numerous here, but they have been so efficiently regimented by Rome that they make a showing far beyond their actual importance.

Strenuous Competition

Whatever Germany may have in mind for the future there is no doubt that, right at this moment, she is out for blood in the Costa Rican commercial field. "Aski" marks, those redoubtable weapons of German commercial warfare, cut as wide a swath in Costa Rica as in a dozen other Latin-American lands. And German cheap prices are as hard for Germany's competitors, including Americans, to meet here as they are in Brazil or Uruguay or Chile.

German attempts at penetration of Costa Rica are becoming especially formidable in the coffee business. They are brought to bear in two ways: through a campaign for getting an increasing share of Costa Rica's coffee exports, and through actual purchase of coffee-growing, coffee-cleaning and coffee processing properties in this country.

These certainly tend to show that Nazi Germany is bent on getting a foothold in Costa Rica far firmer than mere commercial dealings could ever give her. There are individuals in the know here who are convinced that these purchases are moves, carefully planned in Berlin, with some ulterior object not economic but political in view.

As for straight commercial penetration Germans are commending themselves to Costa Rican favor by buying Costa Rica's coffee in quantities which are growing steadily. The purchases of those of their principal competitors, the British and ourselves, show an alarming tendency in the other direction.

British Buying Drops

In 1927 Britain bought 76 per cent of Costa Rica's total exports of coffee, against a purchase of 12 per cent by Germany. For the next few years the position of the two rivals remained substantially the same. But, in 1933, the British took only 53 per cent, while the Germans pushed their purchases up to more than 17 per cent. In 1934 the British staged a rally, climbing back to 67 per cent, while the Germans made the (for them) unprecedented record of 23 per cent.

In 1935 and 1936 they drove steadily forward; their purchases of Costa Rican coffee for the first of those years reached almost 26 per cent of Costa Rica's total shipments abroad and, for the following year, 30 per cent. The British, meanwhile, bought a mere 43 per cent in 1935 and only 40 per cent in 1936.

In 1937 they dropped to a record low of 32 per cent, With Germany hitting 29 per cent, only a bit below her record high for the previous year. In 1938 the British staged another comeback, pushing their purchases up to almost 42 per cent, whereas the Germans fell back to somewhat over 25 per cent. But, judging from the first returns for 1939, the British may be in for another blow in 1939, their purchases for last January having totaled 27,600 sacks, against Germany's total of 39,400 sacks.

U. S. Purchases Vary

Recent American purchases of coffee from Costa Rica have shown marked variations, running from a low of 7 per cent of total exports from this country in 1934 to a high of nearly 25 per cent in 1933. Only twice since 1927 (in 1932 and 1933) did we buy more than Germany and never have we come anywhere near to equaling British purchases for any year from 1927 to 1938.

If, however, we keep up the pace set in January of the present year we may succeed in doing this in 1939, for we took that month 26,000 sacks of Costa Rican coffee, as against 27,600 bought by the British.

In their campaign to dominate the market as buyers of Cost Rica's coffee German interests here—obviously on orders and with special aid from Berlin—are offering Costa Rica coffee growers prices far higher than those offered by British, Americans or any one else. By this means they soon dominate an entire district, since coffee planters there, who, in a normal situation, would show their sympathies by selling to non-German bidders, are absolutely compelled to take the higher German offer. In some cases, however, their anti-Nazi prejudices are so strong as to make them deliberately accept a price lower than the one offered by the Germans.

This is the nineteenth of a series of articles by Mr. Ybarra, who is making a tour of Latin America.

Foreign Service Men in Five South American Nations Take Part

WIDE INCURSION REPORTED

Germans Lead in Imposing Dogmas Through Trade—Grip Strong in Peru

This dispatch comes from the chief South American correspondent of THE NEW YORK TIMES. *It is sent from Chile because at Lima, Peru, the government imposed a censorship.*

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

ANTOFAGASTA, Chile, Jan. 2.—United States Foreign Service officers from all the west coast republics of South America have gathered at Lima, Peru, for a ten-day conference opening tomorrow.

Those attending the conference will include diplomatic and consular officers and military, naval and commercial attachés and the commanding officer of the United States naval mission to Peru.

The State Department has sent Laurence Duggan, chief of its division of American Republics, and one of his assistants to Lima for this meeting. The deliberations will be conducted under the presidency of Laurence A. Steinhardt, Ambassador to Peru.

The conference has a long, important agenda, covering the broad field of political and commercial policy to be followed by the United States in South America. The

For $100,000,000 Rise In Funds for the Army

By The Associated Press.

WASHINGTON, Jan. 2.—A possible $100,000,000 increase in the army's appropriation this year was forecast today by Representative Snyder, chairman of a subcommittee in charge of the War Department Supply Bill.

"My committee," he said in a statement, "will be inclined to appropriate something like $100,000,000 more this year for national defense equipment than we did last year.

"We expect by 1942 to have 8,000 airplanes, modern and up-to-date, with seacoast and anti-aircraft equipment sufficient to keep any foe from encroaching upon our shores, and at the same time be able to help our neighbor, South America, in case the Monroe Doctrine would be encroached upon by a foreign power."

Last year's army appropriation was $463,000,000.

censorship.

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

ANTOFAGASTA, Chile, Jan. 2.—United States Foreign Service officers from all the west coast republics of South America have gathered at Lima, Peru, for a ten-day conference opening tomorrow.

Those attending the conference will include diplomatic and consular officers and military, naval and commercial attachés and the commanding officer of the United States naval mission to Peru.

The State Department has sent Laurence Duggan, chief of its division of American Republics, and one of his assistants to Lima for this meeting. The deliberations will be conducted under the presidency of Laurence A. Steinhardt, Ambassador to Peru.

The conference has a long, important agenda, covering the broad field of political and commercial policy to be followed by the United States in South America. The presence of military and naval attachés indicates an even broader field of discussions than has been announced.

Secrecy Surrounds Talks

There will be twenty men present from Bolivia, Chile, Colombia, Ecuador and Peru, ranging in grade from Ambassadors to Vice Consuls and from naval commanders to assistant trade commissioners. Their daily duties cover the entire range of the United States Government's activities in South America.

Considerable secrecy will attend the deliberations, as they are intended primarily to bring the State Department into closer personal contact with field men and to give the latter the benefit of the department's most recent information on matters in which they are concerned.

Lima was selected as the seat of the conference because several of the men who are attending it were already there for the Pan-American Conference.

One of the most important matters on the agenda is consideration of the "fascist invasion" of South American countries. The rapidly growing importance of Fascist and Nazi activities was plainly apparent at Lima during the Pan-American Conference. Preliminary conversations among Foreign Service officers have disclosed that the conditions they have been reporting to Washington as local are part of a vast well-organized campaign throughout the West Coast republics and presumably throughout the South American Continent. As one Foreign Service officer expressed it to this correspondent:

"We have found that our recent reports to Washington could have been dated at Santiago [Chile], La Paz [Bolivia], Caracas [Venezuela] or Quito [Ecuador] and been perfectly correct for all countries."

Germans More Aggressive

A pre-convention exchange of views has also shown that the Germans are much more belligerent than the Italians in trying to force their policies on South American republics.

Important South American business houses of all the West Coast countries, for example, have been notified by German agents that, unless they discharge all Jewish employes, they will not get any more German business. This order is not confined to German Jews, but includes Jews born in the South American countries. A definite order has been delivered that no company employing any Jew in any capacity can do any business with Germany.

Information in the possession of

U. S. AGENTS STUDY FASCISTS' INROADS

Continued From Page One

United States Foreign Service officers shows this order has given rise to racketeering activities on the part of German agents in some localities. In Peru, for instance, there are three known cases where German agents have accepted large cash payments for not enforcing the anti-Semitic order.

A group of prominent Germans in Lima has begun an investigation to learn what became of funds collected from German firms in Peru on a supposed "shake-down" order from Berlin. The funds apparently were never transmitted.

Well Organized Campaign

Information that United States Foreign Service officers have taken to Lima shows that Germany is conducting a well-organized offensive on the entire west coast of South America from Panama to Tierra del Fuego, by which the foreign political ideology of the Nazi State is forced onto South Americans in return for commercial advantages. The meeting of these officers at Lima is expected to indicate what steps, if any, the United States can take to protect its interests from such invasion.

One of the outstanding objectives of the Pan-American conference was to protect democracies from invasion by Fascist and Nazi ideologies. But the majority object which presented itself at Lima is how to protect democracies if the people in South America welcome Fascist ideology, as many then already are doing.

Brazil made a strong, successful fight against inclusion of the word "democracy" in the conference's declaration of solidarity. She was backed up by Peru, which is openly under Fascist influence.

The question the delegates asked each other most frequently without getting a satisfactory answer was: What can be done in cases where Fascist infiltration reaches the point where the people prefer fascism to the South American brand of democracy?

The Declaration of Lima specifically establishes the condition that consultative machinery to consider measures for warding off threats against South American governments can be set in motion only by the country so threatened. There is nothing to prevent any country from becoming Fascist if it wants to.

It is clearly apparent to United States Foreign Service officers that, if anything is going to be done to protect democracy as an institution in South America, it will have to be done before Fascist and Nazi infiltration converts South Americans into totalitarianism. They hope to work out some answer to this problem at Lima.

CHILE'S NEW REGIME LISTS FIRST ACTIONS

Popular Front Tries to Justify Its Sweeping Dismissal of Former Officials

CITES WORKERS' DEFENSE

Among Achievements Appear Amnesty for Nazis and the Return of Pawned Goods

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Jan. 8.—Summing up the first fortnight's achievements of the new Popular Front government, a prominent leader of the Socialist movement and Secretary-General of the present administration today gave out an official statement. It endeavors to justify the sweeping out of a great number of officials of the past previous administration and explains that many of the measures adopted are planned to protect the working classes. Among its achievements, the following are mentioned:

"Total renovation of the political authorities of all Provinces and Departments in accordance with the new composition of the ruling government, which belongs to the Popular Front;

"Reorganization of the higher staff of the Carabiner forces [rural police] with the idea of bringing these forces closer to the people;

"An eight-hour period of work daily for all fiscal employes;

"Strict measures against gambling throughout the country;

"Prolongation of the period of military service in the Provinces of Santiago, Valparaiso and Concepcion with adequate compensation;

"Readjustment of the commanding groups and direction of the army, navy and aviation services;

"Reorganization of the control of the Exchange Commission;

"Freedom granted to all political prisoners, especially Nazi elements arrested during the Sept. 5 revolt;

"Examination by the courts of charges brought against government employes by the past administration;

"Return to the owners, without charge, of all property in pawn shops that belongs to the working classes, especially working tools, sewing machines and similar objects;

"Raising the tariff duties on imported gasoline without permitting a raised cost to the public;

"Reincorporation of all professors and teachers discharged by the past administration on the ground that they were Communists;

"Readjustment of the commissariat, controlling prices and movement of food of every kind;

"Readjustment of the inspection of the Workers' Bureau with the idea of enforcing social legislation;

"Determination by the government of the price of wheat, bread and milk;

"Nullification of all decrees of the past administration granting land concessions in the Territory of Magallanes with an investigation entrusted to judges."

The authorities announce that there will be periodic issuance of bulletins revealing the progress of the work of the Popular Front administration under the new President, Pedro Aguirre.

THE N

STATE DEPARTMENT QUERIED ON MEXICO

HIS PAGE IS UNCALSSIFIED

Representative Kennedy Asks It to Lay Full Correspondence on Seizures Before House

INQUIRES ON FASCIST TIES

Resolution Also Seeks Replies Concerning Expropriations and Daniels's Activities

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 1.—A resolution asking the State Department to lay before the House of Representatives its full diplomatic correspondence on Mexican expropriations and Mexico's relations with the Fascist powers and to answer specific questions on Mexican relations was introduced today by Representative Martin J. Kennedy of New York.

Included in the scope of the "resolution of inquiry" are questions dealing with Mexican barter arrangements with Germany, Italy and Japan and their implications; the expropriation of all types of properties in which Americans are financially interested, such as railroads and oil, and the activities of the United States Ambassador to Mexico, Josephus Daniels.

Mr. Kennedy said that under House procedure the resolution was referred to the Foreign Affairs Committee, and that if this committee did not report it within seven days, he would have the right to move to discharge the committee and to have the House direct the Secretary of State to answer the inquiries.

Explains His Action

"I have resorted to this summary procedure provided for by the rules of the House so that the country might have a clear understanding of what appears to be a dangerous situation from the viewpoint of the safety and welfare of this country," Mr. Kennedy explained in a written statement.

"This resolution should serve to clarify the Mexican situation. The American people, unlike people living under dictators, insist on the true facts concerning this most serious situation.

"The country realizes that secret diplomacy often has led to war and that there has been entirely too much mystery about our own diplomatic relations with Mexico and the relations of Mexico with foreign dictators."

The questions that the State Department would be required to answer within fifteen days from their receipt are as follows:

"Is it true that the Mexican Government has bartered oil from American and British properties expropriated for German, Italian and Japanese products, and is increasing such barter arrangements?

"Exclusive of oil, have not American investments in Mexico been eliminated, or decreased enormous-

priation of American and British properties? Did not such shipments start almost immediately after expropriation?

"Is it true that Mexican real wages have fallen in the past two years?

"Did the Ambassador inform the State Department beforehand that the railroads and oil properties would be expropriated, or was that, as Mr. Josephus Daniels was publicly quoted as saying later, 'a bolt from the blue'?

"Has the State Department a full

NAZI POLICE ROUT COFFEE SEEKERS

Disperse Lengthening Queues as Shortage Grows Worse—Arrest Complaining Women

Wireless to THE NEW YORK TIMES.

BERLIN, Feb. 8.—The coffee shortage in Germany is becoming so acute, with the queues before the coffee shops so long, that the police, the press and the Ersatz [substitute] industry have been pressed into service to meet the emergency.

The police are beginning to disperse the queues and any complainants are arrested on the spot. This is proving an embarrassing task, however, because the queues for the most part consist of women who disdain to dissemble their discontent as carefully as the men and whose arrests merely disorganize the households of working "racial comrades" and leave babies unattended. So the women must soon be released.

The Ersatz Industry is stretching the available supply by mixing the coffee beans with roasted barley.

Despite this, many cafes find themselves short of the popular beverage. Private consumers, if they are lucky, may get a few hundred grams of coffee at a time, and some coffee shops are introducing ration cards to supply their steady customers with at least a little.

The press denounces persons standing in the queues as "coffee hyenas" and accuses them of sacrificing every sense of decency to their greed for coffee, thereby furnishing "the Jewish hate press" with new atrocity material about the Third Reich.

The Angriff declares that the run on coffee is unnecessary because new financial arrangements with Brazil with supply new coffee shortly, which will leave "the hoarders sitting on their mastered stocks."

But the Stuttgarter Kurier frankly warns those standing in line that unless they recover their sense of shame the decent people of Stuttgart will resort to "self-help"—as they did against the Jews.

INQUIRES ON FASCIST TIES

Resolution Also Seeks Replies Concerning Expropriations and Daniels's Activities

WASHINGTON, Feb. 1.—A resolution asking the State Department to lay before the House of Representatives its full diplomatic correspondence on Mexican expropriations and Mexico's relations with the Fascist powers and to answer specific questions on Mexican relations was introduced today by Representative Martin J. Kennedy of New York.

Included in the scope of the "resolution of inquiry" are questions dealing with Mexican barter arrangements with Germany, Italy and Japan and their implications; the expropriation of all types of properties in which Americans are financially interested, such as railroads and oil, and the activities of the United States Ambassador to Mexico, Josephus Daniels.

Mr. Kennedy said that under House procedure the resolution was referred to the Foreign Affairs Committee, and that if this committee did not report it within seven days, he would have the right to move to discharge the committee and to have the House direct the Secretary of State to answer the inquiries.

Explains His Action

"I have resorted to this summary procedure provided for by the rules of the House so that the country might have a clear understanding of what appears to be a dangerous situation from the viewpoint of the safety and welfare of this country," Mr. Kennedy explained in a written statement.

"This resolution should serve to clarify the Mexican situation. The American people, unlike people living under dictators, insist on the true facts concerning this most serious situation.

"The country realizes that secret diplomacy often has led to war and that there has been entirely too much mystery about our own diplomatic relations with Mexico and the relations of Mexico with foreign dictators."

The questions that the State Department would be required to answer within fifteen days from their receipt are as follows:

"Is it true that the Mexican Government has bartered oil from American and British properties expropriated for German, Italian and Japanese products, and is increasing such barter arrangements?

"Exclusive of oil, have not American investments in Mexico been eliminated, or decreased enormously in value, since 1929, and has not this process been vastly accelerated since President [Lazaro] Cárdenas took office?

"Have reported loss of American investments in many fields led to reductions in United States-Mexican trade?

Fisheries Posts Involved

"Is it true that the Mexican Government has just appointed a Minister to Berlin after the post has been vacant since 1937; that Japanese Government fisheries experts have served as honorary commissioners of the Mexican Bureau of Fisheries recently and Mexican youths are being sent to Japan for free fisheries educations; further, that Japanese engineers constructed the Jalapa-Veracruz highway and that Japanese have Mexican official fishing concessions on the West Coast?

"What has the State Department done to obtain adequate compensation for American holders of bonds in the Mexican National Railroads expropriated in 1937?

"Does the State Department have any evidence that Germany, Italy and Japan had an agreement to absorb Mexican oil, including that now being shipped to the German and Italian Navies, before expropriation of American and British properties? Did not such shipments start almost immediately after expropriation?

"Is it true that Mexican real wages have fallen in the past two years?

"Did the Ambassador inform the State Department beforehand that the railroads and oil properties would be expropriated, or was that, as Mr. Josephus Daniels was publicly quoted as saying later, 'a bolt from the blue'?

"Has the State Department a full record of the American Ambassador's speeches and public remarks in the period prior to and after the recent major expropriations, and does it endorse these?

Text of Speeches Asked

"What was the complete text of all speeches made by the American Ambassador to Mexico on the subject of expropriation and also the complete text of all his reports to the Secretary of State on this subject and on the subject of Mexico's relations with Germany, Italy and Japan, as well as reports from other sources on the same subjects?

"Is it satisfied that the American Ambassador in Mexico City is now taking steps to protect the remaining American investments in Mexico on a fair basis?

"Did the State Department, as publicly reported, agree to the expropriation of any American-owned property in Mexico after the recent United States-Mexican agreement to adjudicate land claims was signed and was any such property expropriated?"

Mr. Kennedy last week introduced a resolution asking for an inquiry by seven members of the House into the Mexican situation, but such an inquiry would involve long delay, he said.

ROOSEVELT PLEADS FOR HELP FOR CHILE

Stresses Ties of Friendship and Understanding With the Earthquake Victims

ASKS GIFTS TO RED CROSS

President Aguirre Plans Taxes to Raise Huge Fund for Reconstruction Work

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 1.—President Roosevelt said today the effects of the Chilean earthquake were becoming hourly more serious and urged coordination of all private agencies aiding in the disaster.

He asked that all contributions by individuals and organizations be made through the American Red Cross, which had been assisting its sister society in Chile from the outset.

President Roosevelt's statement read:

> The effects of the catastrophe which has overtaken the people of Chile become hourly more serious. The need for hospital supplies, food and clothing is imperative. Perhaps greater than all else is the need for prompt and practical help that may further strengthen the magnificent morale shown by a people afflicted by an appalling calamity.
>
> It is desirable not only to make the best effort we can to help our friends and neighbors who are in distress, but to make this effort in the most effective way. Therefore, I urge all those individuals, institutions and organizations whose sympathies are aroused by the grief and suffering of thousands in Chile to coordinate their efforts and to make their contributions through the American Red Cross which, from the outset of this disaster, has been giving assistance through its sister society, the Chilean Red Cross.
>
> Some days ago I instructed the United States Army and Navy to cooperate in every practical way. Since medicines and other hospital supplies are of paramount importance, I am glad to say that United States army planes have already landed in Chile with emergency supplies. This cooperation on the part of this government will be continued.
>
> In accordance with their traditional practice, the American people will surely wish to give such assistance as they can to peoples of other lands who are in distress, particularly when, as in the present case, those suffering from disaster are the nationals of an American republic bound to the people of the United States by close ties of understanding and of friendship.

Norman Armour, left today by plane for the United States to explain the situation to President Roosevelt.

Two United States Army planes which flew to Chile with anti-gangrene and anti-tetanus serums are making trips twice daily between Santiago and Chillan and Concepcion, conveying wounded and medical supplies. Wounded from Chillan and smaller towns have advanced gangrene.

A United States Army plane arrived today with Mrs. Edward G. Trueblood, wife of the second secretary of the United States Embassy, who had been unable to leave Valdivia since the earthquake.

Dr. Hopkins of the Pan-American Sanitary Commission is at Concepcion guarding the water supply. He has already put in large quantities of chloride because of the danger of pollution.

Socialist leaders today urged the authorities to control the movement of thousands of orphans who are being distributed throughout large cities to childless families. The same control is urged for Chillan, where it was charged "white slave traffic" agents were busy.

Armand Rodriguez, one of the secretaries of the Presidency, urged military headquarters to watch for "white slavers." He said they should be shot if discovered profiting from the disaster.

The Exportation Council voted today not to permit shipments of cereals and other products that may be required to feed the nation because of the heavy losses of farmers in stricken provinces. Strict measures are being adopted to curb speculation in prices of foods.

The El Salto Observatory declared it would not give out any more scientific information because recent statements had been reported as forecasts, causing panic among the 100,000 victims.

Three volcanoes, Llaima, Chillan and Antuco are still erupting, but the volume of ashes is decreasing.

Rumors to Bring Whippings

SANTIAGO, Chile, Feb. 1 (AP).—The Chilean Government decreed today that any person found guilty

made through the American Red Cross, which had been assisting its sister society in Chile from the outset.

President Roosevelt's statement read:

The effects of the catastrophe which has overtaken the people of Chile become hourly more serious. The need for hospital supplies, food and clothing is imperative. Perhaps greater than all else is the need for prompt and practical help that may further strengthen the magnificent morale shown by a people afflicted by an appalling calamity.

It is desirable not only to make the best effort we can to help our friends and neighbors who are in distress, but to make this effort in the most effective way. Therefore, I urge all those individuals, institutions and organizations whose sympathies are aroused by the grief and suffering of thousands in Chile to coordinate their efforts and to make their contributions through the American Red Cross which, from the outset of this disaster, has been giving assistance through its sister society, the Chilean Red Cross.

Some days ago I instructed the United States Army and Navy to cooperate in every practical way. Since medicines and other hospital supplies are of paramount importance, I am glad to say that United States army planes have already landed in Chile with emergency supplies. This cooperation on the part of this government will be continued.

In accordance with their traditional practice, the American people will surely wish to give such assistance as they can to peoples of other lands who are in distress, particularly when, as in the present case, those suffering from disaster are the nationals of an American republic bound to the people of the United States by close ties of understanding and of friendship.

The Chilean disaster is of such tragic proportions as to merit the most prompt and generous response from the American public.

500 Army Tents Shipped

The President's statement was followed by a Red Cross announcement that the War Department had ordered 500 army tents shipped from the Canal Zone to Chile. The Red Cross also announced that it had directed a large consignment of medicines be forwarded by airplane to the stricken area. Vaccines, dressings, bandages, ether, surgical instruments, splints and X-ray plates were among the medical supplies.

Chairman Norman H. Davis of the American Red Cross said $25,000 had been spent for Chilean relief of which $11,000 was sent in cash to the Chilean organization and the rest spent for medicines.

"Indications are that additional quantities of medical supplies will be needed for the wounded in Chile," said Mr. Davis. "We have asked our Red Cross chapters to accept contributions from the public for these distressed people, and as fast as money is received we will be able to send further medical supplies which are so urgently needed to save lives.

[The American Junior Red Cross sent a $1,000 contribution for relief of Chilean children in the earthquake zone, according to The Associated Press. Officials said the money came from the National Children's Fund of the United States junior organization.]

Taxes to Raise Repair Fund

Special Cable to THE NEW YORK TIMES.

SANTIAGO, Chile, Feb. 1.—Chile prepared today to raise 2,500,000,000 pesos for reconstruction of the communities in six provinces that were almost entirely destroyed last Tuesday by the worst earthquake ever experienced in South America.

It is planned to raise almost the entire amount by heavy taxes on farming lands, inheritances, industries, commerce, telegraphic and cable communications and many other items. President Pedro Aguirre Cerda said funds would be obtained quickly to speed reconstruction.

Technical commissions will set out soon to make reports. Geological conditions in the six provinces will be investigated before work commences.

President Aguirre asked Congress to give him power to float in Chile or abroad loans up to 2,000,000,000 pesos.

The United States Ambassador, which flew to Chile with anti-gangrene and anti-tetanus serums are making trips twice daily between Santiago and Chillan and Concepcion, conveying wounded and medical supplies. Wounded from Chillan and smaller towns have advanced gangrene.

A United States Army plane arrived today with Mrs. Edward G. Trueblood, wife of the second secretary of the United States Embassy, who had been unable to leave Valdivia since the earthquake.

Dr. Hopkins of the Pan-American Sanitary Commission is at Concepcion guarding the water supply. He has already put in large quantities of chloride because of the danger of pollution.

Socialist leaders today urged the authorities to control the movement of thousands of orphans who are being distributed throughout large cities to childless families. The same control is urged for Chillan, where it was charged "white slave traffic" agents were busy.

Armand Rodriguez, one of the secretaries of the Presidency, urged military headquarters to watch for "white slavers." He said they should be shot if discovered profiting from the disaster.

The Exportation Council voted today not to permit shipments of cereals and other products that may be required to feed the nation because of the heavy losses of farmers in stricken provinces. Strict measures are being adopted to curb speculation in prices of foods.

The El Salto Observatory declared it would not give out any more scientific information because recent statements had been reported as forecasts, causing panic among the 100,000 victims.

Three volcanoes, Llaima, Chillan and Antuco are still erupting, but the volume of ashes is decreasing.

Rumors to Bring Whippings

SANTIAGO, Chile, Feb. 1 (UP).—The Chilean Government decreed today that any person found guilty of starting rumors would be publicly whipped to the beat of drums. For especially alarming rumors the punishment was set at 100 lashes.

President Pedro Aguirre Cerda asked, and Congress is expected promptly to approve, the creation of a 2,500,000,000-peso fund for relief and rehabilitation, a sum nearly one-half greater than the normal annual budget.

No official estimate of the death toll has been made, but it is believed it will be around 25,000.

Throughout Chile individuals and organizations are coming forward with relief donations. Women contributed gold wedding rings.

Business men opened a few stores under temporary shelters in devastated Chillan. Prices were fixed to prevent profiteering. Sanitary conditions were improved and the government believed it had prevented epidemics.

The Pan American-Grace Airline completed its work of removing the most seriously injured persons from the area.

Ecuador Helps Chile

QUITO, Ecuador, Feb. 1 (UP).—An extraordinary Congress authorized today the donation of 100,000 pesos for relief in the Chilean quake zone. Congress was called by President Aurelio Mosquera Narvaez Dec. 14, the day he dissolved the Constituent Assembly which elected him President.

Today's Congress declared the Ecuadorean Constitution of 1906 to be the nation's governing instrument.

Army to Double Military Aides In Latin America to Combat 'Isms'

Teaching in Military Schools to Be Part of Duties of 29 Officers—Navy to Send Ships on Courtesy Visits in Next Few Months

By The Associated Press.

WASHINGTON, Feb. 14.—A far-reaching program, under which the United States will station more military representatives in Latin American republics and give assistance to those countries, is about to go into effect.

Within a few months, the United States will have twenty-nine officers of the army, including the air force, in Latin America, in addition to naval attachés and missions.

Coming at a time when the Brazilian Foreign Minister, Oswaldo Aranha, is in this country discussing defense and other questions with American leaders, the program is described by officials as having much political significance.

It means a determined attempt on the part of the Administration to offset the attempts by totalitarian States to penetra' Latin America through military representatives and missions.

In many cases the United States Army officers accredited to Latin American States will be directing or assisting in the military colleges of the Republics.

The full program, which is disclosed today for the first time, is as follows:

An officer will go to Tegucigalpa to cover Honduras, Salvador and Guatemala.

Another is going to Lima to handle matters pertaining to Ecuador and Peru.

The aviation mission now in Argentina, consisting of two majors, four captains and two first lieutenants, will be continued.

The military mission in Brazil, now composed of four men, has been increased to five with the addition of an ordnance officer. There is also a military attaché in Rio.

The two army instructors in Haiti will be increased by one. They will virtually be in charge of the Haitian Military School.

The navy is sending a naval attaché to Cuba. He will have duties at other places in the Caribbean Sea.

The army contemplates sending another officer to join the one in Mexico City.

An army mission of one man is going to Colombia.

An officer is being sent to Nicaragua to officiate at the Army School there.

A military attaché is ordered to Caracas, Venezuela, to handle matters concerned with Colombia and Venezuela.

At present there are twenty-two United States Army officers in Lat-

ARMY LATIN STAFF WILL BE DOUBLED

Continued From Page One

in-American nations, as follows: Argentina, nine; Brazil, five; Central America, two; Haiti, two; Mexico, one; Cuba, one; Colombia, one; Chile, one.

Increases are scheduled as follows: Nicaragua, one; Haiti, one; Honduras, one; Venezuela, one; Peru, one; Mexico, one; Brazil, one. Further increases will be made when the need for them is seen.

Fascist Progress Is Studied

Staff officers here are keeping in close touch with the Latin-American situation. For several years they have been studying the progress being made by Germany and Italy in winning the friendship of Latin-American nations through their military missions.

They have not lost sight, either, of the efforts of the democracies, Britain and France, to increase their military representation in this hemisphere.

They have studied the efforts made by Germany and Italy to induce young officers of Latin American republics to study in the military schools of the totalitarian States. They have kept check of the sales of military equipment by Germany and Italy to the South American republics.

Staff officers here hope to receive a greater number of South and Central American students into United States military academies.

The new program is in line with the declaration of Lima drawn up at the recent Pan American Conference. In that pronouncement the American republics expressed their determination to defend themselves against foreign aggression, whether military or political. The program is designed to enable the republics to defend themselves against military aggression.

Foreign Minister Aranha is expected to return home with an agreement by United States officials to facilitate the sale of airplanes and probably anti-aircraft material to his country. Brazil is regarded by officers here as being the most vulnerable of the Latin American States because it is the nearest to Europe.

Visits by 3 Cruisers Are Planned

Special to THE NEW YORK TIMES.

WASHINGTON, Feb. 14.—Three of the newest and finest cruisers of the United States fleet were designated by the Navy Department today to make courtesy visits to the principal ports of South America, the cruise to include ports on the Atlantic and Pacific coasts.

No significance, it was said, was to be attached to the fact that the visits were ordered so soon after the recall by Premier Mussolini of Italian cruisers, which were making courtesy calls at South American ports.

The decision to send the cruisers to South America, it was explained, has been under consideration for some time.

The cruisers, all of the heavy type, are the San Francisco, flagship of Rear Admiral H. E. Kimmel; the Quincy and the Tuscaloosa. They will sail from Guantanamo, Cuba, on April 8. The first port of call will be La Guaira, Venezuela. The other ports to be visited, in the order named, are Rio de Janeiro, Montevideo, Buenos Aires, Valparaiso and Callao. The cruise will end officially at Balboa, Canal Zone, on June 4.

Another squadron, under Rear Admiral W. S. Anderson, will visit Cartagena, Colombia, March 25 to 30. The cruisers to make this visit are the Northampton, Salt Lake City and Pensacola.

Guayaquil, Ecuador, will be visited by Destroyer Division 4 of the fleet May 27 to June 2.

The Navy Department also announced that the San Francisco, Quincy and Tuscaloosa, at the end of the South America cruise, would join the Atlantic Squadron. It is probable that three or four of the light cruisers now attached to the Atlantic Squadron will go to the Pacific.

NAZIS PRESS BRAZIL TO SUPPLY COFFEE

Offer Increased Purchases if More Imports of German Products Are Allowed

TRADE BARRIERS ATTACKED

United States, Giving Balance in Dollars, Offsets Appeal of Reich's 'Phony' Money

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, Jan. 7.—Germany has presented her current coffee shortage to Brazil in the form of what is virtually a veiled trade ultimatum.

A press dispatch, apparently directed to this country, states that Germany is willing to increase purchases, especially from coffee-producing countries, if those countries will increase their imports of German goods.

This Berlin statement, released here today, accompanies a description of how coffee is being rationed in Germany. It is stated that the shortage is due especially to trade obstructions raised by some coffee-producing countries.

Brazil is presumed here to be the chief country at which this statement is aimed since the government has recently put into effect trade regulations that materially reduce the German chance of unloading unrestricted quantities of merchandise in this country.

It is admitted here that the German willingness to make barter agreements offers a considerable temptation to the Latin-American countries that so frequently struggle with problems of overproduction. It is observed that because of Germany's refusal to trade in international currency, a sort of trade psychology, like this latest "ultimatum," is being employed.

In the case of Brazil, however, the trade with the United States is a measuring rod for the German methods. The United States and Germany are the chief competitors for the Brazilian import trade.

For the last eleven months, in volume imports, the United States and Germany have been neck and neck. But in that time the United States trade has given Brazil a favorable trade balance, in United States currency, of $33,540,000. German trade has represented a deficit for Brazil.

This is due in part, it is noted, to the fact that the trade with the United States is carried on in dollars, while German trade has to be financed through compensation marks, usually called "phony money" here.

In spite of a decrease in American imports of about $5,000,000 in the period under review, and in spite of the most recent German pressure, trade observers here believe that the United States can use this factor to combat and surpass German trade incursions. They believe that what is necessary is a better canvass of the market for the United States, coupled with good personal representation and more favorable credit terms.

Mines Sold by Colombia After Theft of Emeralds

Special Cable to THE NEW YORK TIMES.

BOGOTA, Colombia, Jan. 7.—The Colombian Government announced today the sale by auction of the Muzo emerald mines, which had been closed because of difficulties in administration and the theft of a large quantity of emeralds.

The government had operated the mines for many years, but continued thefts of the mines' best stones caused the decision to transfer them to private operators.

The Bank of the Republic holds in its vaults more than 24,000 carats of uncut Muzo emeralds.

ITALIANS ARE ATTACKED

Ecuador Prevents Demonstration Hostile to Naval Officers

Special Cable to THE NEW YORK TIMES.

GUAYAQUIL, Ecuador, Feb. 1.—The government prevented a hostile meeting of Quito University students and Socialists planning a demonstration against officers of the Italian cruisers Eugenia di Savoia and Duca d'Aosta after a reception at military headquarters yesterday, according to the Prensa.

Twelve students, including Señorita Aida Illueca of Panama and Abelardo Ruiz of Colombia, were arrested and fined for distributing pamphlets entitled "War on Fascism."

The newspaper Universo reports that a group of Communists and Socialists stoned a tennis club here when the Italian colony gave a reception for the cruisers' crews. Mounted police and carabiniers were sent to protect the club.

The cruisers, which are on a good-will tour of Latin America, are anchored at the port of Salinas because their draft is too deep for them to reach this city via the Guayas River.

THE

U. S. PLAN ASSAILED IN SOUTH AMERICA

Papers Attack Sincerity of the Good Neighbor Policy After Proposal to Sell Arms

DOUBT EUROPE IS THREAT

Internal Blow to Uruguay and Argentina Is Feared—Trade Aid Is Urged

By JOHN W. WHITE

Wireless to THE NEW YORK TIMES.

MONTEVIDEO, Uruguay, March 26.—The sincerity of the good neighbor policy is being seriously questioned in South America as a result of the project to facilitate the sale of warships and munitions to South American republics. The criticism is particularly bitter in Argentina and Uruguay. They are the two countries most affected by the inability of the United States to import agricultural products and they are the two that would be most affected by any rearmament program in Brazil.

The trade situation between the United States and Uruguay is even worse than that between it and Argentina, since Uruguayan production is much more restricted than Argentina's, being limited almost entirely to wool, meat and hides.

Uruguayan editors argue that the best way to make the good neighbor policy effective is to open the huge United States market to South American products instead of trying to load down these already financially embarrassed countries with an expensive armament race.

La Prensa Attacks Idea

The newspaper Prensa of Buenos Aires, which has stood firmly on the side of the United States in the recent trade controversy with Argentina, strongly attacks the proposal to facilitate armament purchases in South American countries. It says that approval of Senator Key Pittman's project not only would alienate certain South American countries from the United States, but would tend to arouse enmity among the South American republics themselves, thus ruining all that has been done to associate them fraternally under Pan-American efforts.

The Argentines are particularly bitter that certain American sources have cited Argentina's military and naval position as a reason why Brazil should rearm with the financial assistance of the United States. The editorial intimates that the Americans are deliberately stirring up trouble between Argentina and Brazil by such comparisons of their armed strength.

The Prensa says South Americans expected the good neighbor policy to be one of cooperation in practical beneficial measures that would tend to increase production and international trade and consequently improve the general economic situation. Instead of that, says its

La Prensa Attacks Idea

The newspaper Prensa of Buenos Aires, which has stood firmly on the side of the United States in the recent trade controversy with Argentina, strongly attacks the proposal to facilitate armament purchases in South American countries. It says that approval of Senator Key Pittman's project not only would alienate certain South American countries from the United States, but would tend to arouse enmity among the South American republics themselves, thus ruining all that has been done to associate them fraternally under Pan-American efforts.

The Argentines are particularly bitter that certain American sources have cited Argentina's military and naval position as a reason why Brazil should rearm with the financial assistance of the United States. The editorial intimates that the Americans are deliberately stirring up trouble between Argentina and Brazil by such comparisons of their armed strength.

The Prensa says South Americans expected the good neighbor policy to be one of cooperation in practical beneficial measures that would tend to increase production and international trade and consequently improve the general economic situation. Instead of that, says its editorial, the United States now proposes to load down the republics with a costly armament race, which they cannot afford and which can lead only to trouble.

It denies that there was any danger of invasion of South American countries from Europe. An armament race based on a fictitious European danger can end only in sowing the seeds of alarm and suspicion among the South American nations themselves, it adds, dividing and separating them one from the other instead of contributing to their fraternal cooperation as democracies.

Calls Us a Strange Neighbor

The newspaper Manana of Montevideo says the United States proposal clearly proves that Washington is trying to initiate its so-called good neighbor policy with a group of countries it does not even know. Only inexcusable ignorance of the requirements and aspirations of the South American countries could lead to such proposal, it holds. Even an elementary knowledge of the situation here would have convinced Washington that the only way to put the good neighbor policy into effect was to open American markets to South American products.

"But instead of this, what does the United States do?" it adds.

"It offers to lend us money to buy warships we don't need. It is impossible to imagine any greater insanity than this of offering to countries already overloaded with economic difficulties due to the dedecline of international trade the one surest way of making their situation still more critical—that of persuading us to enter the international armament race for no possibly justifiable cause."

The newspaper Debate of Montevideo describes the Pittman project as audacious, recalls that an Argentine protest put an end to a former United States project to lease destroyers to Brazil, and expresses the belief that there will be a similar reaction to the new project. It thinks it is significant that the proposal does not contemplate letting Latin Americans have secrets regarding the construction and equipment of United States warplanes.

Japanese Says Our Fear Over Fascists Is Needless

If this country is alarmed at German and Italian propaganda in South America it is "fearing something that doesn't exist," according to Nobuo Fujimura, newly appointed Japanese Consul General to Manila, who is here en route to Tokyo after having served three years as Consul in Lima, Peru.

In an interview yesterday at the Hotel Pennsylvania Mr. Fujimura asserted that the only foreign propaganda in South America was that emanating from the United States and that South Americans were "fed up" with it—not pro-American propaganda but propaganda to the effect that Germany and Italy were spreading propaganda in South America.

"South American governments are not influenced by the Fascists or Nazis," Mr. Fujimura declared. "They are independent and they don't want any interference from other governments. The principle of government is democracy in Peru and, generally, all South American governments are the same. Nationalism is very strong in every way."

Visiting Italian 'Good-Will' Admiral Pelted With Eggs, Vegetables on Reaching Panama

By The Associated Press.

PANAMA CITY, Feb. 4.—Anti-Italian demonstrations today pelted with eggs and vegetables an automobile bearing the Italian Minister and an Italian Admiral and aides on an official visit to President Dr. Juan Demostenes Arosmena.

The car was badly spattered and so much refuse flew in before the window could be raised that the party had to return to the Admiral's visitinf flagship to change clothes before carrying out the call.

The disturbance occurred about noon as the automobile carrying Minister Italo Capanni and Admiral Eduardo Somigli passed Santa Ana Plaza on the way to the Presidental palace. It lasted between fifteen and twenty minutes.

Admiral Somigli is commander of the cruisers Eugenio di Savoia and Duca d'Aosta, on a world's "good-will" cruise.

[Virginio Gayda, leading Italian editor, had declared, two days ago, that Italy and Germany might be obliged to extend their defensive frontier to the Panama Canal.]

Police reinforcements arrived shotly after the disturbance started and began gathering in the participants. Originally the demonstrators were a small group numbering between thirty and fifty, but increased as store and office workers left their jobs for lunch.

As fast as the disturbers could be arrested and arraigned they were sentenced each to ten days in jail on charges of disorderly conduct and inciting the populace.

The Executive power, that is the President and Minister of Justice, ordered al lsubordinate authorities sternly to prevent further infractions of "Panama's traditional hospitality" during the visit of the Italian ships.

Measures taken included confining police resreves to their barracks for emergency duty.

Yesterday the anti-Fascist league petitioned Mayor C. M. Ossa for permission to hold a demonstration. The Mayor refused and the Governor upheld the Mayor. Then the league appealed to the Executive power which refused to consider the appeal.

THE NEW YORK TIMES, FRIDAY, MARCH 10,

PAN-AMERICAN IDEA ATTACKED IN REICH

Former Envoy to Burgos Urges Peaceful German Invasion to Offset U. S. Influence

ASSAILS LIMA CONFERENCE

Thinks Franco Victory Should Free South America From Washington Domination

BERLIN, March 9 (AP).—Major Gen. Wilhelm Faupel, German Ambassador to Nationalist Spain in 1937, pitted a German idea of Latin Americanism today against the United States' idea of Pan-Americanism.

Speaking at the biweekly luncheon of the German Academy, the General charged:

"The United States, by painting dangers of invasion of Latin America by the totalitarian States and by promulgating at the same time the idea of Pan-America, hopes to establish a united front on the Western Hemisphere which will be ready in case of need to turn against the totalitarian States."

He urged the leaders of the academy to provide for a wholesale peaceful invasion of Latin America by German, linguists, educators, scientists and engineers and for return visits by South Americans to Germany.

"There is but one danger to Latin America," he declared. "That is the United States."

Use Radio, Press and Film

"We want to live in peace with the United States," he said, "but we cannot leave unanswered charges that have been launched against us by the United States to curry favor with Latin America.

"We must make liberal use of radio, press and film, just as North America does."

General Faupel said that the Lima Conference "must be evaluated as an attack on a grand scale against totalitarian States in general" and Germany in particular.

Against the idea of Pan-America, which he described as a clever invention of the United States, he proposed the idea of a Spanish-America.

"The countries of South and Central America have much more in common with Spain and Portugal than with the United States," he declared.

General Faupel said that "not only should as many German individuals visit Latin America as possible but whole professional groups such as physicians, scientists and historians should go there."

He suggested that the German Academy invite South and Central Americans "in ever increasing numbers here to show them how far we are ahead of all nations in our culture and social measures."

"There is one happy circumstance about this fight," he said. "The truth is on our side."

General Faupel contended that the history of the United States was a vast catalogue of imperialistic designs on other peoples "authough the Monroe Doctrine also included the obligation not to interfere in other parts of the world."

"Yet the United States has been interfering constantly in all parts of the world," he added. "We have heard plenty of speeches about self-determination, peace, democracy and so forth by North American and other statesmen.

"These speeches are in the crassest contradiction of United States practices * * *

"Other States on the Western Continent are more modest. From its name alone we can see that the United States from the beginning laid claim to continental totalitarianism.'"

He described President Rosevelt's "good neighbor" policy to an effort to offset intense Latin-American antipathy toward the United States.

"It merely was a change in method," he declared, "and will prove to have been but a passing phase. At no time has the United States given up its claim to domination of the North and South American Continents."

He concl_ded that a victory for Nationalist Spain would cement bonds between Europe and Latin America, helping Latin America win what he called its struggle for freedom from domination by Washington.

Attack on Pittman

General Faupel's speech came on a day marked by sharp attacks on the United States.

Diplomatische Korrespondenz, the mouthpiece of the Foreign Office, charged democracies with spreading lies about Germany and asserted:

"Those innuendoes too, which for example America launches again and again concerning aggressive plans by the authoritarian States against the South American States, are sad proof of the fact that appeasement of the world is by no means desired by certain circles."

Large posters appeared on bulletin boards devoted to Nazi publicity material in some Berlin office buildings assailing Senator Key Pittman, chairman of the United States Senate Foreign Relations Committee, as an anti-German agitator.

They showed Senator Pittman's head and shoulders in life size with the caption: "Mark Him Well." In addition, they contained a tirade against the United States as being "Jew-ridden' 'and as "trade-snatchers in South America." -

NEW YORK TIMES, FRIDAY, MARCH 10, 1939.

by our forces, and in a short time order and quiet will be restored to Madrid."

The Valencia press continues to assail the Communists, while hopefully writing that this week's developments are tending toward an early peace. In support of this hope they quote liberally and exclu-

BOWERS RETURNS; SILENT ON FUTURE

Recalled Ambassador Avoids Comment on Our Stand on Spanish Government

FOUND REFUGEES PITIABLE

Saw 400,000 Flee to France —Is Proud of Absence of 'Incidents' With Franco

Claude G. Bowers, United States Ambassador to Spain for the last six years, who established a temporary embassy at St. Jean de Luz, France, after the outbreak of the Spanish civil war nearly three years ago, arrived yesterday in the Cunard White Star liner Queen Mary on his way to Washington.

He had been recalled by the State Department to confer with President Roosevelt and Secretary of State Cordell Hull on the question of recognizing the new Franco government.

Mr. Bowers declined to comment on the results of the Spanish conflict or the future of the government there, declaring all such information would have to come from the State Department after he had conferred with officials in Washington. Asked about reports that he probably would not return to Spain, he refused even to say whether he expected to remain in the diplomatic service.

He had had occasion only once to communicate with Generalissimo Franco, and that was when the American freighter Nantucket Chief was seized forty miles off

Times Wide World

WORLD 'NEW DEAL' HAILED BY ARANHA

Our Dollar, Not Our Army or Navy, Greatest Peace Force, Brazilian Minister Says

EXPECTATIONS FULFILLED

Negotiations at Washington Will Help Reverse State of Fear, He Asserts

An "international New Deal policy" came into force yesterday with the conclusion of the exchange of notes on finance and trade between the United States and Brazil, Dr. Oswaldo Aranha, Brazilian Foreign Minister, declared in an interview at the Waldorf Astoria Hotel upon his return from Washington, where he had conducted negotiations for his government.

"My mission has been fully successful and my expectations, economically and politically, have been fulfilled," Dr. Aranha said. "The day marks the beginning of a new international New Deal policy by which Brazil will benefit. So far we have been working more and have been receiving less—now we will work more and receive more."

The world, according to the Brazilian Minister, "is dominated by fear, superceding material interests of the peoples." The trade policy now entered upon will, in his opinion, reverse that issue by re-establishing the old way of commercial cooperation.

Says It Is Only a Starting Point

"The newly concluded agreement will put common interests above fear, and will mark the beginning of a new policy of mutual help and association," Dr. Aranha said. "Yet what we have accomplished is only the starting point of a policy which, we hope, will be extended to all countries of good-will for the sake of all."

He added that the new economic arrangement was based on two points; first confidence, for the establishment of which he credited the American negotiators of the agreement; and, second, a program of orthodox finance.

"You are a creditor country which until now did not realize its position fully," Dr. Aranha said. "Now you undertake the important step of promoting economic recuperation of cooperative expansion."

"Will other arrangements follow?" Dr. Aranha was asked.

"Our understanding is based upon the new trend with the prospect that other nations will follow the same policy," he answered. "The needs of individual nations are individual, but there are immense possibilities for the future of a larger scope."

Asked whether such possibilities would include the totalitarian powers, the Minister replied:

"We said clearly that we wanted to buy for peaceful means and it will depend entirely upo nthe totalitarian states whether they want to join. But they obviously cannot come in if they continue to pursue their policy of race persecution."

Holds Isolation Not Likely

Dr. Aranha brushed aside the suggestion that the United States would isolate herself in times of an aconomic crisis.

"She would not," he said. "To the contrary, the realization seems to gain here that you must cooperate. Only them can crises be overcome."

Declaring that this country had more than half of the income of the world, Dr. Aranha suggested that the United States should make "wise use" of her powerful dollar as a medium to further peace.

"American people are the easiest people in the world to deal with, because they have an open mind," he said. "But we from South America must come here and get the thing started. You have the most efficient means for peace, not through your army and navy, but through your dollar. Your dollar is the product of your capacity. Spend it wisely by buying and selling, and it will further peace and understanding."

Dr. Aranha arrived at 6:05 P. M. yesterdty from Washington. He was met by Oscar Correia, Brazilian Consul General in New York, and had dinner at the consul's home, 840 Park Avenue. He will sail tonight on the Argentina.

Special to THE NEW YORK TIMES.

WASHINGTON, March 9.—A broad series of commercial and financial agreements for expansion of trade was concluded between Brazil and the United States today through an exchange of notes between Secretary Hull and Oswaldo Aranha, the Brazilian Foreign Minister, who has been conducting official conversations here for the past month.

In the opinion of diplomatic observers it marked the successful culmination of one of the most important missions conducted by a South American stateman for many years.

In one particular, a decision of Brazil to free its exchange market, State Department officials considered it one of the most important financial and economic measures taken on the Western Hemisphere in recent times.

It indicated that Brazil considered the quickest route to established

BRAZIL'S ARMY CHIEF MAY VISIT ITALY SOON

Embassy Says He Has Accepted —Also Invited to Germany

Special Cable to THE NEW YORK TIMES.

RIO DE JANEIRO, Brazil, March 29.—The army Chief of Staff, General Pedro Aurelio Goes Monteiro, will soon visit Italy and perhaps Germany, according to a report current here. As he is now in Rio Grande do Sul, his personal confirmation was unobtainable, but the Italian Embassy indicated he had accepted an invitation, though his departure date had not been settled.

For some time the totalitarian nations have been inviting high-ranking Brazilian officers to visit them. Several navy and army officers are now in Italy and Germany.

Three months ago it was reported that Germany had invited General Goes Monteiro, but this was later denied.

Seven Brazilian Navy officers are to leave April 5 for the United States and a group of army officers and aviators soon thereafter.

ficial conversations here for the past month.

In the opinion of diplomatic observers it marked the successful culmination of one of the most important missions conducted by a South American stateman for many years.

In one particular, a decision of Brazil to free its exchange market, State Department officials considered it one of the most important financial and economic measures taken on the Western Hemisphere in recent times.

It indicated that Brazil considered the quickest route to established economic recovery was through maintenance of a free exchange market.

Credits and Service on Debts

The arrangements provide for the extension of credits by the United States to Brazil for the expansion of commerce and industry that, it was estimated in some circles, might total, in various forms, as much as $120,000,000. In addition to freeing exchange, Brazil agreed to resume service on its foreign debt of $357,000,000 in this country, beginning July 1.

The freeing of foreign exchange will have the effect of throwing off the German yoke of restricted foreign exchange.

Not only does this strike at the system of using compensating marks by which Germany has increased its trade in Brazil at the expense of the United States but the implication is given that barter arrangements between Brazil and other nations will be limited and Brazilian markets opened more largely to goods from "free exchange" countries. Moreover, the creation of a Central Reserve Bank in Brazil provides that its currency will be tied to the American dollar.

There are no military commitments.

Summary of Terms

A summary of the agreements follows:

1. The Export-Import Bank undertakes the extension of credits to Brazil in the amount of $19,200,000 for freeing Brazilian exchange to make possible payments to American exporters covering merchandise heretofore shipped to Brazil and not yet paid for.

2. The Export-Import Bank undertakes to assist in the financing of future exports by American manufacturers and producers to Brazil by granting banking credits under arrangements the details of which will be worked out at the time of the negotiations for this aid.

3. The Washington government proposes to ask Congress for authority to provide up to $50,000,000 of gold to Brazil for its Central Reserve Bank, repayment to be made from Brazil's future production of gold.

4. The Washington government will undertake to furnish to Brazil such agricultural and other technical aides as will enable it to diversify its production and increase its national development.

5. Brazil will issue an edict freeing its exchange to enable its importers to acquire American products.

Equal Terms for Investors

6. Brazil proposes to guarantee to American investors treatment equal to that now or hereafter accorded its own nationals, this in the face of pending ultra-nationalistic legislation that might otherwise affect adversely United States interests.

7. By diversification of its production Brazil will undertake extensive

GERMANS TEACHING ARGENTINA'S ARMY

But Their Influence Has Waned in Chile and Bolivia After Long Dominance

FIELD FOR U. S. MEN SEEN

Washington Already Sending Instructors to Buenos Aires —More Experts Sought

By T. R. YBARRA

In the southern part of South America, much of which I have just traversed, two of the leading countries, Argentina and Chile, have had their armies trained by German officers in the German tradition. Bolivia also entrusted the training of its soldiers some years ago to German experts. But in all three the Germans show signs of being on the wane.

In Argentina, German instructors of the Argentine Army are meeting competition from the members of the American military aviation mission. The work of the latter has been so successful that the Argentine Government wants us to send more of our officers to instruct Argentina's military fliers.

In Chile, where successive German military missions have been employed to train officers and soldiers for more than half a century, the last remaining instructor from Germany recently left for home and has not returned, nor had he been replaced, up to a few weeks ago, by another German.

As for Bolivia, whose army is the only one of the three that has seen actual fighting, German military influence is under a cloud because, in the recent war in the Chaco between Bolivia and Paraguay, the German-trained Bolivians got much the worst of it at the hands of the French-trained Paraguayans.

Argentines Study in Germany

Argentina has employed German military instructors for many years. How highly it thinks of them is shown eloquently by the fact that, at present, there are eighteen Argentine officers studying in Germany and only five in France. Recently, Italy has tried to work her way into Argentine military circles, especially in aviation, but her efforts to have Italian aviators appointed as instructors to Argentine military fliers have failed.

Nevertheless, there is a considerable tinge of pro-fascism among the officers of Argentina's army, one of whom was recently disciplined for ostentatiously giving the fascist salute in public. Among the younger officers there is a tendency to sing the Italian fascist hymn, and otherwise show pro-fascist leanings, but this need not be taken too seriously in a country like Argentina, where there are hundreds of thousands of citizens who have of

government headed by President Balmaceda.

Other Noted German Officers

Among the many officers who at one time or another helped give the Chilean Army its Germanic stamp were a number belonging to famous German military families, some of whom afterward achieved prominence in the World War. One was von Lettow-Vorbeck, who led the German African campaign until he was finally defeated by the South African contingent of the Allies under Generals Botha and Smuts.

Others, whose names will be immediately familiar to all who have followed German military history, were von Alvensleben, von Buelow, Bronsart von Schellendorf, Count von Koenigsmarck and Count von der Schulenburg.

Six German officers who were in Chile as instructors in 1914 returned to their country and were killed at the front.

The number of these instructors gradually dwindled after the World War until, finally, only one, General von Kiesling, remained. He also returned to Germany a short time ago. So now, for the first time in many years, there is no one to carry on the Prussian tradition among Chilean soldiers, a favorable opportunity, it would seem, for instructors from some other nation to step in.

The rough handling received by Bolivia's German-trained troops from the French-trained Paraguayans in the recent Chaco war has caused many a chuckle among anti-German South Americans. One of the main reasons, according to some observers, for Bolivian defeats was the over-confidence of many of the Bolivian officers, who felt that their men, trained by Germans in the methods that had brought Germany's army such marked military efficiency in the past, must necessarily triumph over their foes, who knew nothing of such methods.

There were also other causes for Bolivian reverses, two of which were particularly detrimental to the forces of Bolivia. The first of these was the fact that her soldiers, accustomed to high mountainous regions, were compelled to fight in the low, swampy, pestilential Chaco. The second was the extraordinary military prowess of the Paraguayans, who are born fighters, as they proved in the war waged by them some seventy years ago.

This war still arouses South Americans to lyrical outbursts of admiration, since, in its cause, little Paraguay defied the combined armies of Brazil, Argentina and Uruguay and refused to acknowledge defeat until her male population had been almost wiped out.

One of the German military experts who helped train the Bolivian Army was Captain Ernst Roehm, who, after he returned to his native Germany, became one of the principal aides of Adolf Hitler and later the principal victim of Herr Hitler's ruthless "purge" in June, 1934.

This is the twenty-seventh of a series of articles by Mr. Ybarra, who has just returned from a tour of Latin America.

Nicaragua Fliers Called Potential U. S. Fighters

Special Cable to THE NEW YORK TIMES.

MANAGUA, Nicaragua, March 11.—Lieutenant Modesto Valle, son of the chief justice of the Nicaraguan Supreme Court, Nicaragua's first aviator to complete the two-year flying course at Randolph Field, San Antonio, Texas, arrived here yesterday from the United States. He was guest of honor at a reception to Nicaragua's military forces last night. While in Cuba he received medals for distinguished service and wings of honor.

President Anastasio Somoza said: "I consider every Nicaraguan aviator and soldier as a potential fighting man for the United States and I hope to send other young men to the United States to learn aviation."

BOLIVIAN OIL RULING STUDIED BY WELLES

U. S. 'Deeply Interested,' He Says, in $17,000,000 Forfeiture

Special to THE NEW YORK TIMES.

WASHINGTON, March 11.—Sumner Welles, Acting Secretary of State, said today that the State Department was deeply interested in the decision of the Bolivian Supreme Court yesterday, ruling against the Standard Oil Company of New Jersey, whose investment of $17,000,000 was declared forfeited under a decree of the de facto government at La Paz two years ago.

Mr. Welles said he was not prepared to comment in detail, however. He explained that he had seen only a summary of the decision but that close study was being given the text by legal officers of the department and thorough consideration was being given the case. He declined to express an opinion as to whether there was any parallel between the circumstances in Bolivia and the oil expropriations in Mexico.

gentine officers studying in Germany and only five in France. Recently, Italy has tried to work her way into Argentine military circles, especially in aviation, but her efforts to have Italian aviators appointed as instructors to Argentine military fliers have failed.

Nevertheless, there is a considerable tinge of pro-fascism among the officers of Argentina's army, one of whom was recently disciplined for ostentatiously giving the fascist salute in public. Among the younger officers there is a tendency to sing the Italian fascist hymn, and otherwise show pro-fascist leanings, but this need not be taken too seriously in a country like Argentina, where there are hundreds of thousands of citizens, who have of Italian blood.

Italian elements in Argentina have sought to counteract the influence of the United States military aviation and naval missions now instructing army officers in that country, but they have made little headway.

Our aviation mission now consists of eight officers, detached from their regular duties for this special assignment. If Argentine requests are heeded, two more will soon be added. Our naval mission has three members.

ALSSIFIED

Germany's military mission in the Argentine Republic is now officially composed of one general, two colonels, one lieutenant colonel, one major and one captain. Of the eighteen Argentine officers now studying military methods in Germany one is a general, four are majors, eight captains and four lieutenants. Only one colonel, one lieutenant colonel and three majors are studying in France.

53,000 in Argentine Army

The Argentine regular army, to which these various foreign officers are devoting their expert attention, now consists of about 3,000 officers and 50,000 rank and file. In the reserve are 5,000 officers and 200,000 men. About 30,000 conscripts join the colors yearly.

Argentina's military aviation corps is a separate unit, consisting of some 1,500 officers and 2,000 enlisted men. It has about 150 planes. The navy possesses two battleships, three cruisers, sixteen destroyers, four submarines and a considerable number of smaller auxiliary vessels. Including the active force and reserve the personnel of the Argentine Navy totals around 2,000 officers and 125,000 enlisted men. This navy has a separate aviation force with about 750 officers and men and 100 planes.

Chile's German-trained forces consist of a regular army of about 18,000 and reserves of more than 600,000. The principal units in her navy are two battleships, three cruisers, eleven destroyers and nine submarines. Her air force has about 200 planes.

Chile's interest in German military methods goes back to her victorious war against Peru sixty years ago. As a result of Germany's success against France in the Franco-Prussian War of 1870-71, she had acquired considerable prestige among South American military leaders, so much so that German officers straying to South America in search of more fighting found ready employment.

One of these, named von Moltke, who is said to have been a first cousin of the famous German Commander in Chief against the French, so distinguished himself as an officer in the Chilean Army, fighting the Peruvians, that he attracted the attention of General Sotomayor, one of the Chilean commanders. Herr von Moltke was killed in the fighting outside Lima, Peru's capital, but the impression he had made on General Sotomayor was so great that after the war was over the general was instrumental in having the Chilean Government invite a German officer to serve as military instructor.

This officer, Captain Koerner of the regular Prussian Army, reached Chile in 1885. He was the first of many, who, arriving singly or in groups, soon gave the Chilean Army a Germanic imprint which it shows to this day. Captain Koerner did not content himself with instructing Chileans in the military art; he mixed in Chilean politics and was one of the principal leaders of the rebels who, in 1891, overthrew the

Latin Liberals Want Roosevelt Third Term; Choose Washington for Congress to Help It

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

MONTIVIDEO, Uruguay, March 25.—American delegates and observers at the International Congress of American Democracies that closed here yesterday were surprised at the vehemence of the conference's support of President Roosevelt and everything that he stands for.

Washington was chosen as the seat for the next conference and September of election year was chosen as the date because, it was argued in the conference sessions, an enthusiastic Latin-American Democratic conference in Washington at that time would undoubtedly help to elect Mr. Roosevelt for a third term.

At the final plenary session the delegates rose to their feet and approved by acclamation, accompanied by rousing cheers, a resolution pledging support to Mr. Roosevelt in the following terms:

"The International Congress of American Democracies resolver:

First, to emphasize and bring to the attention of public opinion throughout the continentthose principles proclaimed by President Roosevelt in defense of democracy and peace;

"Second, to demand for his attitude the stimulation and support of all democratic forces in the Americas such as political parties and social and cultural organizations."

A similar resolution applauding President Lazaro Cardenas of Mexico was also approved.

The authorities of the congress took steps this afternoon to put into immediate movement the machinery set up by the conference for the organizing of a militant inter-American Popular Front.

This Popular Front is designed to be an international organization similar to that which won the recent elections in Chile. Its two main objectives will be:

1. To make a fight against the Fascist invasion of the American continent and at the same time to oppose race hatred in the Americas.

2. To seek to wrest control of the Latin-American governments away from the conservative landowning class.

As a first step in organization the executive board of the congress set itself up as a permanent central bureau with headquarters in Montevideo.

The secretarial staff of the conference today began the task of classifying and printing the forty-three projects approved by the conference in order to transmit them to hundreds of organizations whose support is sought.

Among those projects is the setting up of a permanent committee of American jurists to defend political prisoners in all the American republics. It is proposed also to take measures to secure the right of asylum for all persons persecuted by Latin-American governments for their political or social ideas.

One resolution pledged the unstinted support of all democratic forces of the Americas for the movement in favor of equal civic and political rights for women.

Another resolution demanded unrestricted liberty of action for all labor movements.

Nicaragua's Cotton Crop Purchased by Germany

Special Cable to THE NEW YORK TIMES.

MANAGUA, Nicaragua, March 27.—Germany has purchased on a barter basis the entire cotton crop of Nicaragua and also large quantities of coffee, cottonseed oil, rubber, hides, deerskins and cabinet woods of all classes. Large German tramp ships are now loading at Corinto.

Nicaragua will receive in return barbed wire, nails, Diesel trucks, automobiles, hardware and pharmaceutical products.

Producers would prefer to sell for cash, but other countries cannot purchase all Nicaragua's exportable products.

Argentine Government to Get Most Supplies From Reich Under a Big New Barter Deal

By JOHN W. WHITE

Special Cable to THE NEW YORK TIMES.

BUENOS AIRES, Argentina, March 15.—The Argentine Government is finishing final details of big new barter deals with Germany and Italy, which will run into many millions of dollars and give the two leading totalitarian States a virtual monopoly in supplying this country's government supplies during the current year.

A German barter deal involves 1,500,000 metric tons of wheat. This is the equivalent of 55,125,000 bushels and is believed here to be the largest barter deal Germany has negotiated in South America since she began her determined trade penetration.

At the Argentine Government's fixed price of 70 pesos per metric ton for wheat the value of the operation is in the neighborhood of 105,000,000 pesos. At the free-market rate of exchange this is equivalent to $24,150,000. But at the official rate, at which the Central Bank buys exchange from grain importers, it is the equivalent of $35,000,000. It is expected that the value eventually fixed for the operation will be closer to the latter figure.

As originally proposed, Germany was to take 100,000 metric tons of wheat, equivalent to 3,675,000 bushels. The Argentine State Railways were to import German railroad equipment, including Diesel streamlined trains, to a value equal to the cost of the wheat taken by Germany.

In its present stage the barter deal will be fifteen times as large as was originally proposed, and it will provide a tremendous quantity of material for several other departments of the Argentine Government. It is reported that Argentina will agree to take automobiles, trucks and buses as well as a large quantity of sanitary equipment and materials for public health service.

It is not clear yet whether the Argentine Government will import Italian merchandise direct, as it is doing from Germany, or whether it will grant importers of Italian goods exchange at the offical rate of exchange, which would give Italians a decided advantage over importers from countries that cannot get the official rate of exchange.

Argentina is now frankly embarked on a policy of barter arrangements with all countries that will purchase Argentine agricultural and pastoral products, principally grains. When the Minister of Finance bought newspaper advertising space last month to explain why Argentina was cutting

MINISTER IS KILLED IN PERU AS HIS COUP IS FOILED BY TROOPS

General in Cabinet Tries to Talk Way Into Power After President Goes on Holiday

PUT TO DEATH BY A MAJOR

Failure to Outwit an Officer Dooms Movement—Benavides Rushes Back From Sea Trip

By The Associated Press.

LIMA, Peru, Feb. 19.—General Antonio Rodriguez, taking advantage of the absence of President Oscar Benavides, tried to seize the Government Palace about 2 A. M. today in an attempt to overthrow the government and was killed.

General Rodriguez, Minister of Government and Interior since 1935, last night had escorted President Benavides to the pier at Callao, Lima's port, where the President and a party of government ministers boarded the naval transport Rimac for a three-day holiday. There General Rodriguez embraced the President, expressed wishes that he would have a happy holiday and bade him farewell.

Then the general returned to Lima and proclaimed himself head of the government in two manifestos one addressed to the nation and the other to the armed forces—in which he explained far-reaching measures to replace the Benavides Administration.

Meanwhile the city, not suspecting what was going on at the palace, was passing the night in celebrating a carnival.

"Some Few" Rebels Slain

A communiqué issued by Premier Ernesto Montagne tonight said that General Rodriguez had had only a few followers from his own department of the government and that loyal troops had intervened and restored order. The communiqué

General in Cabinet Tries to Talk Way Into Power After President Goes on Holiday

PUT TO DEATH BY A MAJOR

Failure to Outwit an Officer Dooms Movement—Benavides Rushes Back From Sea Trip

By The Associated Press.

LIMA, Peru, Feb. 19.—General Antonio Rodriguez, taking advantage of the absence of President Oscar Benavides, tried to seize the Government Palace about 2 A. M. today in an attempt to overthrow the government and was killed.

General Rodriguez, Minister of Government and Interior since 1935, last night had escorted President Benavides to the pier at Callao, Lima's port, where the President and a party of government ministers boarded the naval transport Rimac for a three-day holiday. There General Rodriguez embraced the President, expressed wishes that he would have a happy holiday and bade him farewell.

Then the general returned to Lima and proclaimed himself head of the government in two manifestos one addressed to the nation and the other to the armed forces—in which he explained far-reaching measures to replace the Benavides Administration.

Meanwhile the city, not suspecting what was going on at the palace, was passing the night in celebrating a carnival.

"Some Few" Rebels Slain

A communiqué issued by Premier Ernesto Montagne tonight said that General Rodriguez had had only a few followers from his own department of the government and that loyal troops had intervened and restored order. The communiqué said that "some few insurgents" had lost their lives.

General Rodriguez sent his manifestoes to the newspapers, which were just finishing the printing of their morning editions. They hastily prepared extra editions, but before these were ready the situation had changed again with the intervention of the troops.

President Benavides hastily returned to Lima this evening. He had sailed at 10 o'clock last night for Paracas Bay, 250 miles south of Lima.

A reliable source, giving details of the attempted coup, said that General Rodriguez, who in the absence of the President at his palace at Laperla sometimes slept at the Governmental Palace in his capacity of Minister of the Interior, had arrived at the palace about 2 A. M.

He ordered Captain Ismodes, chief of the machine-gun section quartered at the palace, to report to him and told him that he was assuming the Executive post since General Benavides was leaving Peru.

Presidential Palace Informed

Pretending to obey General Rodriguez's order to hand over command of the machine-gun section to a new chief, Captain Ismodes climbed to the observation tower, but not until after he had telephoned the Presidential quarters at Laperla. He then locked himself in the tower and aimed machine guns at the palace entrance.

Aides of President Benavides then took measures to counteract the coup by starting troops from their barracks for the palace. First to arrive was a unit headed by Ser-

MINISTER IS KILLED AS LIMA COUP FAILS

Continued From Page One

geant Major Rizo Patron, who entered the palace.

"I came to do my duty," he informed General Rodriguez.

The general explained that he was Chief Executive because President Benavides was sailing for Europe.

"That is untrue," the officer replied.

Thereupon General Rodriguez tried to seize the officer's pistol, but Major Rizo Patron quickly fired twice, killing the leader of the coup.

Meanwhile, troops were arriving to take up strategic positions on avenues about the palace. But the movement apparently collapsed with General Rodriguez's death, and the troops soon were ordered returned to their barracks by Premier Montagne, who took command.

Four hydroplanes were dispatched to the side of the Rimac after President Benavides had been informed by radio of what was going on. The President and his three Cabinet members were taken aboard the planes and returned to land, where they continued on to Lima by automobile.

General Benavides, escorted by armored motorcycles and three planes, arrived in the city at 5:10 P. M. in an open car. He was cheered by nolookers as his automobile passed the principal street.

STATEMENT BY PREMIERS.

Premier Montagne, temporary head of the government while President Benavides was away, said in his statement:

General Antonio Rodriguez, Minister of Government, abusing the confidence deposited in him by the Chief Executive, General Oscar Benavides, and in connivance with retired General Cirilo Ortega and a few scanty elements belonging to the forces depending upon the Ministry of Government, attempted this dawn to overthrow the legal regime ruling Peru's destinies.

Fortunately for the good of the country, the armed institutions have responded once more to the principles of honor and loyalty on which are based national order and progress. Just a few moments have been sufficient for the failure of this inconceivable attempt.

A normal situation has been restored and order prevails in this capital and throughout the country.

General Benavides, who, as in previous years at this same time, sailed last night on the naval transport Rimac, is returning at this moment to the capital.

When the revolt was thwarted General Rodriguez and some few insurgents lost their lives.

The statement was dated at the Government Palace and was signed "Ernesto Montagne, President of the Council of Ministers."

Accompanying President Benavides on the Rimac when the uprising occurred were Dr. Carlos Concha, Minister of Foreign Affairs; Hector Boza, Minister of Public Works, and Diomedes Arias Schreiber, Minister of Justice.

Regime Termed a Dictatorship

General Ernesto Montagne has been head of the Peruvian Cabinet since April, 1936, having survived several Cabinet changes. Previously he had served as Minister of Justice and Education, and still earlier he had headed a military junta, during the period after the Peruvian revolution of 1930.

During his Premiership the regime in Peru has been characterized as a virtual dictatorship under President Benavides. Strong fascist leanings have been attributed to his government.

The government's strict rule has been explained, however, as an effort to curb the opposition of Aprista party, members of which have charged that many of their number have been jailed, deported or killed.

Dispatches from Lima heretofore had given no indication that General Rodriguez was at odds with the government. On the contrary, his career as a Cabinet Minister had closely paralleled that of Premier Montagne.

General Rodriguez became Minister of the Interior in 1935 and added the post of Minister of Government in October, 1936, when a military Cabinet was formed by Premier Montague. At that time the country was threatened with disorders after a Presidential election.

Before 1935 General Rodriguez had been head of the military forces immediately attached to President Benavides. He was wounded in March, 1932, when a member of the Opposition party attempted the assassination of the former President, Luis M. Sanchez Serro.

The 1936 elections appeared at the time the vote was being tallied to favor the Presidential candidate of the opponents of President Benavides. The election was not allowed to determine the succession to the Presidency, however, since the National Assembly took action extending to Dec. 8, 1939, the term of President Benavides.

This action followed charges by the supporters of General Benavides that the candidacy of the opposition candidate, Dr. Luis Antonio Eguiguren, was a device by the Aprista party, which had been barred from the ballot by the government, to put forward a candidate under another designation.

RISING U. S. DESIRE FOR ARMING FOUND

Gallup Survey Sees Sentiment 20% Greater Among Voters Than It Was in 1935

SHARP GAIN SINCE MUNICH

90% of the Public Reported as Favoring Larger Air Force—86% for Navy Increase

"With European powers arming at a furious rate; with Germany redrawing the map of Europe and with wars already in progress in the Orient and Spain, American sentiment for armed preparedness has increased steadily in the three-year period from 1935 to 1938," according to the results of a survey made public yesterday by Dr. George Gallup.

Dr. Gallup pointed out that three years ago this month the American Institute of Public Opinion began measuring the public's attitude toward a larger army, navy and air force, and had carried on its studies at regular intervals since then. The latest survey, he said, finds that the public is not only overwhelmingly in favor of stronger armed defense, but that preparedness sentiment is about 20 per cent greater today than it was in 1935.

The trend of sentiment is shown in answers to the questions: "Should the United States build a larger navy? Should it enlarge the strength of its army? Should it enlarge its air force?"

Larger Navy?

	Yes	No
December, 1935	72%	28%
December, 1938	86	14

Larger Army?

	Yes	No
December, 1935	70%	30%
December, 1938	82	18

Larger Air Force?

	Yes	No
December, 1935	84%	16%
December, 1938	90	10

The studies find a particularly sharp increase in sentiment for rearmament since the Munich agreement in September. The increase is viewed as "undoubtedly related to the fact that, as indicated in previous institute surveys, a large majority of American voters believe that Munich only heightened the chances of eventual war."

"Increased armed defenses will almost certainly be one of the first subjects which the new Congress will consider," Dr. Gallup said. "Judging by the sentiment in the institute survey, measures for spending money on the army, navy and air force are likely to meet with great popular approval."

He added that the overwhelming sentiment for preparedness did not indicate that the nation desired to go to war with any country. The institute has found that 70 per cent of voters think American participation in the last war was a mistake, and 95 per cent say that if another war like the World War develops in Europe the United States should not take part.

13,000 PLANES AIM OF THE PRESIDENT

Washington Hears 10,000 Will Be Goal for Army, All to Be Ordered in Two Years

VAST SCALE A SURPRISE

Capital Hears His Message on Jan. 4 Will Give Evidence of Menace to Us of Dictators

By The Associated Press.

WASHINGTON, Dec. 26.—President Roosevelt was reported authoritatively today to have decided on a double-barreled recommendation to Congress for reinforcements of the national defense which are of unprecedented peacetime magnitude.

Persons close to the Administration said the Chief Executive intended to report, in the annual message which he will deliver personally to a joint session of Senate and House on Jan. 4, that the security of the nation and its neighbors is threatened by the armed might of aggressive dictator States.

A week later, under present arrangement, a special message will present detailed recommendations for an army air force of some 10,000 planes and numerous other measures.

Thus, the Administration contemplates a quadrupled military air fleet of at least 13,000 aircraft, including the minimum of 3,000 which Congress authorized for the navy in this year's billion-dollar fleet expansion act.

Magnitude Causes Surprise

The magnitude of the air program has caused surprise here, especially in view of the fact that some high army officers were advocating, at least up to recently, a comparatively small air force of high quality.

Early in October, Maj. Gen. Henry H. Arnold, new chief of the Army Air Corps, declared that the country did not need a great many more military airplanes, but needed faster ones. Under the development program being carried on at that time, the army was to have 2,320 craft by 1940. General Arnold, in an interview, called this "a very good figure as things now stand."

These remarks were made about the time of the signing of the Munich four-power accord. Whether the implications of that accord and the post-Munich events abroad have now changed General Arnold's mind is not known. He could not be reached for comment tonight.

There have been reports that some other high officers of the army could not see eye to eye with the Administration on defense plans. Such reports were denied ten days ago, however, by General Malin Craig, Chief of Staff, who said:

"The Administration and the War Department have been working in intimate accord on a program regarding which absolutely no decision has yet been finally made."

A short time before that a retired officer, Major Gen. George Van Horn Moseley, had told the New York Board of Trade that "fear and hysteria" were being engendered in support of heavy expenditures for national defense.

Supporting the President's forthcoming proposals, Congressional circles have heard, will be "startling evidence" that Germany's aerial force and her aircraft factories geared to war demands threaten to upset completely the world balance of military and political power.

From usually well-informed administration and legislative sources come reports of these developments:

1. Details of the new rearmament program are complete. They were shaped in close cooperation with General Craig and other military advisers, since Europe's uneasy peace agreement was reached at Munich. War and Navy Department budgets already have been approved.

2. Convinced that American air power must be quickly augmented, Mr. Roosevelt has not been moved by arguments of some Congressional critics that the United States, protected by two oceans, needed no such force as 10,000 army planes.

3. The Chief Executive and intimate advisers are confident that Congress will approve at least the basic recommendations.

Quick Work on Planes the Aim

Piecemeal disclosures provide this outline of the proposals:

Orders for thousands of additional army and navy planes in the next two years are contemplated. Each service has about 2,000 first-line craft now. Undisclosed numbers would be used for training, others held in reserve. Many would be used to equip the National Guard.

Under plans already announced, the Civil Aeronautics Authority and the National Youth Administration are to assist in schooling upward of 100,000 pilots and 125,000 mechanics as a military "backlog."

New air bases are contemplated.

A key objective is expansion of the aircraft industry's capacity, through commercial and export, as well as military orders, to keep pace with developments abroad. Manufacturers consulted by the War Department obtained the impression there would be no competition from government plants.

Prompt measures are to be taken to remedy deficiencies in the army's anti-aircraft artillery, tanks and other weapons and munitions for the regular army and National Guard. These in addition to a material increase in the Air Corps personnel.

The present expansion of the navy will be continued with funds to start work on two more battleships, probably 45,000 tons, the world's largest; and a score of other warships.

Various measures will be taken to reduce the time, now estimated at eight months, required to switch factories from peace to war production in an emergency. These measures include appropriation of $30,000,000 or more for "educational" orders for munitions and a start toward acquiring a $25,000,000 reserve of minerals and other materials not produced in this country.

Official hints of a $100,000,000 increase for the army and $150,000,000 for the navy over their respective appropriations for the current fiscal year shed little light on the estimated cost of the projected measures.

Some who have seen official estimates said privately that the formal annual budgets represented "only part of the picture."

BARKLEY PREDICTS SESSION OF REVISING

Nothing in Particular in Mind for New Legislation, He Says After Talk With President

12/15/38

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 14.—Senator Alben W. Barkley, the Senate majority leader, talked for two hours at luncheon today with President Roosevelt about the legislative program, going over all phases of the subject as it will be presented to Congress by the President.

Senator Barkley said that the discussion was "full and frank," and admitted that possible revision of the Wagner Labor Relations Act, taxes and the national-defense program were among the subjects.

"We discussed all the possibilities of legislation on all the acts that have been passed by Congress recently," Senator Barkley said. "We talked about the whole legislative situation in a general way, very frankly, but I don't think I would be at liberty to give the details of the conversation."

He explained it would not be fair to the President to emphasize one point of the discussion over another.

Session of Amending Seen

He was asked what possibility there was for new legislation.

"I don't know anything particularly," he replied, "except what may be done to existing laws, amending and correcting them wherever experience has shown they ought to be amended or corrected."

On the question of national defense, Senator Barkley said he thought that little legislation would be necessary. He explained that the naval-expansion program already had been provided for through legislation, and that only annual appropriations were necessary to carry it forward at a rate consistent with the defense program and its cost. As to aviation expansion for the army and navy, he said he thought that additional legislation was necessary and that it would form a part of the program.

WASHINGTON, Dec. 22.—President Roosevelt in person will outline his legislative program to Congress at a joint session to be held in the House at 1 P. M. on Jan. 4.

Preliminary arrangements were made by the President and Speaker Bankhead today at a conference in which the prospects for the session were discussed in detail.

The Speaker declined to disclose what had passed between himself and the President, but previously, at a press conference at the Capitol, he predicted that an increase in air strength would be a main factor in the national defense program. This view he reiterated after his visit to the White House.

WASHINGTON, Dec. 22.—President Roosevelt in person will outline his legislative program to Congress at a joint session to be held in the House at 1 P. M. on Jan. 4.

Preliminary arrangements were made by the President and Speaker Bankhead today at a conference in which the prospects for the session were discussed in detail.

The Speaker declined to disclose what had passed between himself and the President, but previously, at a press conference at the Capitol, he predicted that an increase in air strength would be a main factor in the national defense program. This view he reiterated after his visit to the White House.

Mr. Bankhead reminded his questioners in the executive offices lobby that he had gone over the situation with the President at Warm Springs, Ga., during the Thanksgiving holidays.

House Caucuses Arranged

Before going to the White House the Speaker arranged a caucus of House Democrats to be held in the House Chamber on the afternoon of Jan. 2. At this meeting he will be renominated as Speaker, and Representative Rayburn of Texas unquestionably will be chosen again as majority leader.

Subsequently, the Republican House leaders arranged to hold a party conference at 7 P. M. on the same day, at which the enlarged party representation will select candidates for House offices.

Representative Joseph W. Martin Jr. of Massachusetts, is expected to be nominated as Republican candidate for Speaker. Failing to attain that office, which is a certainty because of the still large majority of Democrats, Mr. Martin then will be named the minority leader, following a well-established custom in the House.

Pending the President's annual message, Speaker Bankhead declined to discuss details of the session's program. His views on national defense, he emphasized, were strictly personal, arrived at "through a common sense approach to the whole situation."

Finds an Expansion Obvious

"It seems a perfectly obvious conclusion that an increase in our air forces will be perhaps the main feature of the national defense program," the Speaker said.

"Our naval plans are rather well laid out. We have ships on the ways and other ships authorized. Still other points are being worked out continuously by our military officials. Our greatest deficiency seems to be in the air."

ROOSEVELT ORDERS AIR PILOT TRAINING OF 20,000 ANNUALLY

Program to Be in Operation in Hundreds of Colleges in Next School Year

'RESERVOIR' OF WAR FLIERS

Emphasis Put on Development of Civil Aviation—NYA to Provide Funds for Step

Special to THE NEW YORK TIMES.

WASHINGTON, Dec. 27.—Completion of plans for the training of 20,000 college students annually as civilian pilots in what was termed here as the greatest aeronautics mass movement ever undertaken was announced today by President Roosevelt. He said that he hoped to have the full program in effect in several hundred colleges and universities in the college year 1939-40. The training will be supervised by army, navy and civilian fliers.

The plan was worked out in secrecy by the Civil Aeronautics Authority. It will be tested almost immediately by the experimental training of 300 young men in perhaps a dozen institutions in the second semester of the current college year.

A major expected result will be the building up of a great "reservoir" of pilots for the army and navy air services in an emergency although the program as announced had no official connection with the military arms. The Civil Aeronautics Authority said the plan was designed to "meet the aeronautical crisis now facing the country." Stimulation of the aircraft manufacturing industry is another expected result.

President Roosevelt conceded in response to questions at a press conference where he made the an-

THIS PAGE IS UNCALSSIFIED

nouncement, that probably the best of the graduates of the college courses would have an opportunity for further training for commissions in the army and navy flying reserve.

Part of Vocational Studies

The mass training will be financed through the National Youth Administration, the President said, as a part of the vocational studies provided by the NYA. Direction of the spending of the funds thus will be in the hands of Aubrey Williams, former Deputy Administrator of the Works Progress Administration.

Mr. Roosevelt intimated that in the near future a program would be announced for comparable training of mechanics, a work already undertaken on a smaller scale, with the result that 7,009 students now are taking ground-work courses.

The CAA estimated, the President said, that operation of the full program would cost $9,800,000 a year, including all items such as the pay of instructors and the expense of facilities and training planes. The planes would be rented instead of bought by the government. This fund will have to be appropriated by Congress.

The experimental training program which will be put under way immediately will cost $100,000, according to estimates, and will be financed out of funds of the NYA.

War Plane Figure Likely in Week

When Mr. Roosevelt was asked if the plan was connected with reports that the air forces would be increased to 13,000 planes, he said only an Einstein could write a story on defense statistics from what he was saying today. A decision on the number of new airplanes to be constructed, he added, might be announced in about a week.

Neither President Roosevelt nor the CAA would estimate the eventual number of pilots who might be trained. The basic program calls for fifty hours of training for selected students between the ages of 18 and 25.

Relatively little comment was available from officials, due to the late hour in the day at which the President made his announcement. Senator Clark of Missouri gave an indication, however, of one phase of the Congressional response.

"The idea of letting Aubrey Williams train 20,000 boys to run air-

planes would be rented instead of bought by the government. This fund will have to be appropriated by Congress.

A decision on the number of new airplanes to be constructed, he added, might be announced in about a week.

Neither President Roosevelt nor the CAA would estimate the eventual number of pilots who might be trained. The basic program calls for fifty hours of training for selected students between the ages of 18 and 25.

Relatively little comment was available from officials, due to the late hour in the day at which the President made his announcement. Senator Clark of Missouri gave an indication, however, of one phase of the Congressional response.

"The idea of letting Aubrey Williams train 20,000 boys to run airplanes," he said, "may be the salvation of our world troubles. It is so funny it might cause Hitler to laugh himself to death."

CAA Issues a Prospectus

The program was described in detail by a CAA prospectus which the White House made public.

"If results obtained at the chosen demonstration centers confirm the Civil Aeronautics Authority's belief in the soundness of its program," the CAA prospectus said in part, "the training pattern developed between now and next June will be applied on a nation-wide scale in several hundred colleges and universities during the 1939-1940 school year.

"That the goal of 20,000 pilots is easily obtainable in a year's time from the 1,200,000 young men and women now enrolled in our colleges and universities is axiomatic, considering the tremendous interest of modern youth in aviation.

"Difficulty is anticipated, not in getting the desired number of young men and women to fly when they are provided with an opportunity to do so, but in setting strict yet fair standards and devising other means of holding down enrollment to a manageable figure.

"Since the act of Congress creating the Civil Aeronautics Authority specifically sets forth that one of the primary responsibilities of this new agency is to foster the development of aviation in the interests of national defense, the Authority considers that it is its duty to formulate and carry out a program which will, to a large degree, meet the aeronautical crisis now facing the country.

Denies Conflict of Services

"It has no intention of infringing on the prerogatives of the armed forces of the United States or of interfering with those services' clear-cut responsibilities in the field of air defense. It is determined rather to supplement their work and assist them in every possible respect.

"The Authority feels that by a careful coordination of its program with those of the army and navy, it will be possible in the event of national emergency to expand the regular military flying services from a reservoir of civilian airmen and aircraft surpassing anything of the sort ever before conceived in this country, or, for that matter, in the world.

"By limiting flight training to college students of 18 to 25 and requiring them to meet the present physical standards for a commercial pilot's certificate, the program will insure that a high percentage of the men thus trained will be able to meet both the physical and educational standards of the military flying services. Thus it will

hazardous than driving automobiles on our congested highways provided: (1) that the standards of flight instruction and subsequent flying operations be raised by sane and constructive regulations, and (2) that the development and use of inherently safer aircraft is required."

Mead for Airline Pilots Reserve

Establishment of an Airline Pilots Reserve Corps as a part of the army will be sought in Congress by Senator-elect James M. Mead of New York, who declared that a close relationship between the army and the airlines would enhance the nation's defensive position.

Mr. Mead had a similar measure before Congress last year, when, as a member of the House and chairman of its Post Office Committee, he led a movement which gained headway near the close of the session for greater coordination of airline facilities with the nation's defense plans.

The bill which he proposes to reintroduce would provide that each airmail pilot would be commissioned as a reserve officer in the Airline Pilots Reserve. Each pilot would be required to take a course of military training for at least one month a year, for which he would be paid by the government at the average rate received by him from the airmail company.

The Postmaster General would issue the rules and regulations for carrying out of the act, but the training and commissioning of the pilots would be under the jurisdiction of the War Department.

All pilots and co-pilots who have been employed by airmail lines for a year or more, and those who may be temporarily unemployed for a period of not exceeding two years, would be covered by terms of the bill. The pilots would be in active service of the United States only in time of war.

No Training in Combat Tactics

By The Associated Press.

WASHINGTON, Dec. 27.—President Roosevelt, in answer to questions at his press conference today, said that while instructors for the student aviation program would be army and navy fliers, there would be no training in combat tactics.

By contrast with the program to train thousands of new pilots, there are in the country today less than 5,000 military fliers, and a total of only 20,000 pilots in all fields of aviation. Thus one year's operation of the plan would double the num-

THIS PAGE IS DECLASSIFIED IAW EO 13526

yet fair standards and devising other means of holding down enrollment to a manageable figure.

"Since the act of Congress creating the Civil Aeronautics Authority specifically sets forth that one of the primary responsibilities of this new agency is to foster the development of aviation in the interests of national defense, the Authority considers that it is its duty to formulate and carry out a program which will, to a large degree, meet the aeronautical crisis now facing the country.

Denies Conflict of Services

"It has no intention of infringing on the prerogatives of the armed forces of the United States or of interfering with those services' clear-cut responsibilities in the field of air defense. It is determined rather to supplement their work and assist them in every possible respect.

"The Authority feels that by a careful coordination of its program with those of the army and navy, it will be possible in the event of national emergency to expand the regular military flying services from a reservoir of civilian airmen and aircraft surpassing anything of the sort ever before conceived in this country, or, for that matter, in the world.

"By limiting flight training to college students of 18 to 25 and requiring them to meet the present physical standards for a commercial pilot's certificate, the program will insure that a high percentage of the men thus trained will be able to meet both the physical and educational standards of the military flying services. Thus it will create a valuable source of supply for these services both for peace-time training purposes and in time of national emergency.

Advanced Training Planned

"The Authority's plan includes provision for the continued training along advanced lines of the best qualified student pilots throughout their college careers and on an alumni refresher-training basis thereafter in order that they may be assured of a means to keep up their flying and maintain their value as a national defense reserve.

"The Civil Aeronautics Authority developed its program after consultation with many leaders of the aviation industry. It is convinced that in addition to building up a valuable aeronautical reserve of young men soundly versed in the fundamentals of flying, the plan will stimulate a healthy development of the aircraft manufacturing industry, and that the two things together will create a back-log of inestimable value to the nation's air defenses.

"Only by such an approach, it believes, can the United States adequately safeguard itself against the vast aerial militarization programs now being pressed with fanatic zeal by foreign powers, unless it is to emulate their warlike preparations.

"It is more in keeping with the American spirit of preparedness to build up a great pool of men and machines, dedicated to and engaged in the pursuits of peace, but yielding first place to no other nation in flying skill or technical development, and quickly adaptable to military needs in the event of war.

Gains in Safety Held Assured

"Essentially, the Authority's plan simply proposes to give aviation its proper place in the vocational training system already established and functioning in the public and private schools of the country.

"Approximately $22,000,000 of Federal funds are now expended annually on such vocational training. The increasing independence of aviation, both as an economic factor in American life and as a necessary back-log to the national defense, amply justify its inclusion in a Federally sponsored vocational training program.

"Heretofore, private flying has been marred by an alarming high percentage of accidents, fatal and otherwise. It is felt that this has been due in part to the lack of adequate and uniformly enforced standards of instruction, both preliminary to and during flight training, and that steps should be taken to remedy this situation.

"The Civil Aeronautics Authority believes that future experience will show private flying to be no more

[...] line facilities with the nation's defense plans.

The bill which he proposes to reintroduce would provide that each airmail pilot would be commissioned as a reserve officer in the Airline Pilots Reserve. Each pilot would be required to take a course of military training for at least one month a year, for which he would be paid by the government at the average rate received by him from the airmail company.

The Postmaster General would issue the rules and regulations for carrying out of the act, but the training and commissioning of the pilots would be under the jurisdiction of the War Department.

All pilots and co-pilots who have been employed by airmail lines for a year or more, and those who may be temporarily unemployed for a period of not exceeding two years, would be covered by terms of the bill. The pilots would be in active service of the United States only in time of war.

No Training in Combat Tactics

By The Associated Press.

WASHINGTON, Dec. 27.—President Roosevelt, in answer to questions at his press conference today, said that while instructors for the student aviation program would be army and navy fliers, there would be no training in combat tactics.

By contrast with the program to train thousands of new pilots, there are in the country today less than 5,000 military fliers, and a total of only 20,000 pilots in all fields of aviation. **Thus one year's operation of the plan would double the number of accredited pilots in the country, officials declared.**

The Civil Aeronautics Authority said that among the institutions chosen for the immediate preliminary demonstration phase of the program were Purdue University, the University of Alabama, the University of Minnesota, the University of Washington, Massachusetts Institute of Technology, the Texas A. and M. College and the Georgia School of Technology. Others are to be announced later.

Fifty hours of dual instructon and solo flying were said to be "sufficient to qualify candidates for the private pilot's certificate" of the Authority.

Congress Fight Is Brewing

The President's announcement came as he prepared to send to Congress recommendations for a vast expansion of the national defense. High officials have said that the Administration contemplates increasing the number of the nation's war planes to some 13,000.

There were signs, however, that critics of vast increases in military spending were preparing for a fight. They indicated that they would ask Congress to scrutinize the need for such expenditures carefully.

Senator Adams, Democrat, of Colorado, said the danger of a foreign invasion was much less than the danger of economic collapse from an unbalanced budget. Representative Fish, Republican, of New York, declared that "war mongers of the New Deal" have unnecessarily alarmed the people.

Senator Clark of Missouri was expected to take a leading part in the fight. He has asserted that America should forget "this silly war hysteria."

CON

J. J. DAVIS ASSAILS PUBLIC SPENDING

Senator Charges Democrats Pour Out Billions to Make the 'Government All-Powerful'

STANDLY on Air-Naval Power in Ethiopia, Munich?

'AVIATION BUBBLE' SCORED

Admiral Standley Warns at Pennsylvania Society Dinner Navy Still Comes First '

12/1-13

Senator James J. Davis of Pennsylvania denounced the spending of billions "to make the government all-powerful," and Admiral William H. Standley, U. S. N., retired, linked the British Navy with American defense plans in addresses at the fortieth annual dinner of the Pennsylvania Society at the Hotel Waldorf-Astoria last night.

After warning that "dictatorships flourish only when the people flounder," Senator Davis, a Republican, asserted that "American freedom and essential equality are now being challenged chiefly in the market place," adding:

"Industry and labor are logical partners, but it never was intended that government and industry should be partners, for they have different responsibilities and such a partnership ignores the rightful place of labor as a partner. The partnership of government and industry is a fascist idea; it is currently being demonstrated in the fascist States of Europe.

Public Spending Deplored

"A dangerous idea of goverment has been gaining ground in America in recent years. Public funds have been spent by the billion to make the government all-powerful. Many have come to accept the idea that the government exists for itself and those who fatten at the public trough.

"Vast sums have been withdrawn from ordinary channels of trade and commerce, keeping labor, business and agriculture weak, in order to make government needlessly strong. These funds have been spent in a partisan way for the perpetuation of one party in power.

"This dangerous idea of government prevailed in ancient Rome when emperor-worship had its day. Official corruption inevitably followed, and this was the beginning of the fall of Rome.

"Public plunder has been the road to ruin for every monarchy in the world. Whenever government ceases to be the servant of the people and begins to exist for itself, good government ends and official corruption begins.

"There can be no rightful profit for agriculture, labor or industry in the United States just as long as men are permitted under the guise of liberalism to make an unfair profit for themselves out of the government.

"The remedy for an overexalted power of State is more power in the people.

"The people should return to power not through revolution, nor by the way of hate, nor by resort to crack-pot schemes, nor through labor or industrial violence. The people must return to power within

fore, its development must remain in the hands of the navy.

"Time has proved the navy right on both counts, and as a result," Admiral Standley continued, "we have today the most efficient and effective navy aviation in the world."

Air Threat Called "Bubble"

Admiral Standley asserted that the air threat bubble which promised to supplant sea power had been exploded in Ethiopia, Spain and China. He appealed to "self-styled strategists and experts on armaments" to leave to the military and naval experts the question of the kind, size and strength of our army and navy forces and the way they should be used in support of this country's traditional policies.

Major Gen. Hugh A. Drum, commanding the Second Corps Area, took part with Admiral Standley in the discussion of the general theme, "National Defense From the Army and Navy Viewpoint." Governor-elect Arthur H. James of Pennsylvania and Senator Davis were the guests of honor.

The Society of Pennsylvania Women in New York also held its annual dinner, with Mrs. Mullin Wayne, president, presiding.

when emperor-worship had its day. Official corruption inevitably followed, and this was the beginning of the fall of Rome.

"Public plunder has been the road to ruin for every monarchy in the world. Whenever government ceases to be the servant of the people and begins to exist for itself, good government ends and official corruption begins.

"There can be no rightful profit for agriculture, labor or industry in the United States just as long as men are permitted under the guise of liberalism to make an unfair profit for themselves out of the government.

"The remedy for an overexalted power of State is more power in the people.

"The people should return to power not through revolution, nor by the way of hate, nor by resort to crack-pot schemes, nor through labor or industrial violence. The people must return to power within themselves. Every man must be the keeper of his own mind and heart, for out of them proceed the issues of democracy.

"America needs strong men who accept as the ideals of their lives the patterns of individual initiative and social responsibility which led our American sires as pioneers from ocean to ocean. America will not be restored to power through one-man government. War will not save America. Excessive government spending is not the way.

"The power of the Almighty working in free minds and strong hearts can save America. No sacrifice is too great to keep our institutions free. National defense on land, sea and in the air is necessary, but it will not be enough if our people do not have spiritual defense in their minds and hearts.

"We have tried the roads of bureaucracy, restricted production and planned scarcity. These have failed. The good life lies open to good will among men, in America, among all nations and throughout the world. Peace comes with plenty, not through poverty. Goodness comes with abundance, not through starvation. Our republican institutions of government come from the people, not from the word of one man."

"Sea Power Low Until Recently"

Admiral Standley asserted that the United States, despite its increasing wealth, world importance and world-wide interests, had found itself "until very recently with only the semblance of a commensurate sea power." After declaring the country's citizens were now alive to the situation, Admiral Standley said:

"It is my opinion that the real reason underlying our failure to provide for adequate defense up to this time is the fact that the American people generally have looked upon England as the Mother Country and have assumed that the United States was ever under the shelter and protection of England's sea power.

"It has always been my belief that the English-speaking races must either stand or fall together. My observation over a period of forty-five years in the navy leads me to believe that deeply embedded in the subconscious mind of the American people is the feeling that when the last call comes, as Admiral Sims expressed it, people with the same origin, the same culture, the same beliefs, the same language and the same ideals and traditions will be found in the same lifeboat.

"We warn against entangling alliances and preach against Anglo-American accord, yet we hold, as most important of our national policies, the Monroe Doctrine, which automatically allies us with Great Britain as to the security of Canada.

"The recent events may be considered as casting their shadows before them, and the possibility of the disappearance of the dominating influence in world affairs of England's sea power removes this influence, and brings home to us the necessity of attending to our own business and providing for our own defense."

Admiral Standley declared that navy officials who had ascertained the effects of bombs dropped by airplane on or near a model battleship were not "theorizing or guessing when they insisted: first, that aviation had not supplanted any existing types, but was complementary to and had greatly increased the efficiency of them; and, second, that naval aviation was the adaptation of aviation to naval uses and, there-

GENERAL

In The Nation

A Suggested CCC Link With National Defense

By ARTHUR KROCK

WASHINGTON, Dec. 14.—In the Administration's secret councils on the national defense program some ideas more enthusiastic than sound have naturally been advanced. Several of the councilors are wholly inexperienced in the subject matter, and several are government-in-business advocates, especially where the business touches the military establishment. The result has been proposals, among others, that unemployed WPA mechanics be set at once to making airplanes, and that the government build and operate three to five great airplane factories.

Informed opinion seems to be that the President will not support either of these ideas or a number of others which, if adopted, could readily swamp the national defense preparation in politics, ineffectiveness and waste. Mr. Roosevelt is expected by the more responsible of the conferees, official and military, to ask Congress for no more than an additional 500 millions as a maximum, and to propose some very sound ways in which to spend it. They expect him also to give serious, and they hope favorable, consideration to a plan to make important and lasting use of the CCC in national defense.

What most frequently is suggested is that the boys in the CCC camps should have military training as a non-elective part of their education. The plan before the President, however, looks to the permanent building and maintenance of a large air force by graduates of the CCC. It is based on observations made by its authors in Nazi Germany, and they propose to take a leaf from Hitler's book. On this leaf is written how the Reich has trained young men in what are something like our own CCC camps to build airplanes and take care of them on the ground and in flight.

Skilled Air Mechanics

Under this plan the government would set up schools beside the private airplane manufacturing plants and man these schools with half the membership of the CCC, or as many up to half who suggest aptitude for and express interest in becoming aviation mechanics. The boys would go to these schools for several years, and those who survived the stiff course would be formally graduated. They would then man the privately operated airplane plants and also be employed in the air establishment of the Federal military forces. The course planned for them is such that, when they have completed it, any of these young CCC men could—given the materials—build an airplane, make it ready for flight, fly it and repair it.

Those experienced in aviation unanimously agree that long and special training is required before even a good master or journeyman mechanic can qualify in this particular field. They are both amused and alarmed when they hear important Federal officials, commissioned by the President to help evolve the national defense program, talk about the building of new aircraft in government shops thrown up hastily by mechanics taken from the WPA rolls or the neighborhood garages. These experts are unable to decide whether they think the hazard of construction or of maintenance would be the greater in the circumstances.

Of all the social and economic innovations of the New Deal, in the President's sincere and often effective efforts to advance the clock of American progress, the CCC has escaped criticism. The tragedy of youth was the most poignant of all wrought by the depression, and the CCC camps have done much to avert and correct that evil consequence. If now many of the youths can find a useful, well-paid and nationally essential occupation in connection with the national defense program, the value of having assembled and educated them will be even better demonstrated. The President's own idea will have paid dividends beyond the already great spiritual and physical ones.

What Hitler Youth Did

By the time the policies of the democracies in Europe had brought them face to face with the September crisis over Czecho-Slovakia, Hitler had employed the long interim to build the military 'planes greatly responsible for the enforced agreement of Munich. The German air force dominated the situation. London and Paris were informed, and believed the information, that the Fuehrer had 10,000 'planes ready for action.

But it was not only the number of these 'planes and their flying personnel which gave superiority to the Germans. As a part of the Hitler Youth Movement they established a four-year training course in air mechanics, beginning with boys of 15. These boys are taught everything from the blacksmith's trade to skilled toolmaking, and then the use of the tools to manufacture parts. At the end of their courses they are assigned to manufacture or maintenance. They live in good buildings, have rest and planned recreation periods, are well fed and well clothed and given a little money by the government. Observers report that the boys are happy, enthusiastic, and those who complete the course are perfectly trained.

The CCC camps provide a ready set of government wards from which those mechanically inclined can be similarly made an essential part of the national defense program.

OUR AIR SUPREMACY IS HELD ENDANGERED

National Advisory Committee Says Intensified Research Is Necessary to Retain It

CITES ACTIVITIES ABROAD

Air Power Declared Dominant in World Affairs—Big Expansion in Plants Urged

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 9.—The challenge of foreign to American aviation in the commercial as well as the military field is one of the gravest problems awaiting the solution of the air authorities of the United States, the National Advisory Committee for Aeronautics warned in a report which President Roosevelt transmitted to Congress today.

The report asserts that the United Statest will soon lose its present high position in international aviation, military as well as commercial, unless aeronautical research in this country assumes greatly increased proportions possible only through increased facilities as well as increased expert personnel.

The fact that President Roosevelt sent the report to Congress almost on the eve of the transmission of his special $500,000,000 defense message was considered significant. Air armament is expected to be emphasized in the new program.

Group Unanimous in Opinion

The report represents the uanimous viewpoint of the National Advisory Committee of which Dr. Joseph H. Ames is the chairman. The other members include Orville Wright, Rear Admiral Arthur B. Cook, chief of the Naval Bureau of Aeronautics; Major Gen. H. H. Arnoud, chief of the Army Air Service; Edward J. Noble, chairman of the Civil Aeronautics Authority; Colonel Charles A. Lindbergh, Lyman J. Briggs, director of the National Bureau of Standards; Charles G. Abbot of Smithsonian Institution; Captain Sydney M. Kraus, U. S. N., and Brig. Gen. A. W. Robins, U. S. A.

German air preparedness is understood to have been in the committee's mind when in a reference to the German-Czecho-Slovakian crisis it cited "the overshadowing of air power in international affairs." The committee is said to have in its possession reliable information which gives in detail the air activities and programs of other nations. Colonel Lindbergh, according to unconfirmed reports, was the source of much of this information.

Air Power's Importance Cited

"Air power at the present time," the committee said, "is a dominant factor in the strength of a nation and in enabling it to maintain its independent existence and territorial integrity. Accepted theories of warfare give a steadily increasing place to air power."

In the "interest of peace and security" the committee asserted that the army and navy should take the lead in the development of adequate...

...eign nations in the development of either military or commercial aircraft.

"The United States for a number of years has held undisputed leadership in the field of aeronautical research. At the present time that leadership is being challenged. Unless we fully recognize the challenge and make provision for extending the committee's research facilities and for increasing the number of its trained research personnel, the United States will definitely fall behind.

"Where a few years ago we were pleased with speeds of around 200 miles an hour, we now seek to attain with fully loaded service airplanes speeds of 300 and 400 miles per hour. It is not only good policy from a financial consideration, but also vital from the standpoint of national defense that American aircraft have a performance equal or superior to that of a potential enemy. This principle necessitates serious consideration of American aeronautical research and experimental facilities."

Activities of Other Nations

Other parts of the report depict the activities of other nations to extend their commercial trade to cover all international routes and the result is, the committee declared, a serious competition in the international field which the United States must successfully meet if its air supremacy in these trades is to be maintained. In the maintenance of this supremacy research must, the committee added, play a commanding role.

"In the rapidly advancing science of aeronautics the technical development of aircraft," the committee concluded, "is directly dependent upon scientific laboratory research. The recent great expansion of research facilities by other nations will bring to an end the period of American leadership in the technical development of aircraft unless the United States also constructs additional research facilities."

A special committee is now considering this problem, and its findings will be made the subject of a special report to the President.

Civil Aviation Expansion Urged

By The Associated Press.

WASHINGTON, Jan. 9.—Increased use of private aircraft is highly desirable, the report of the National Advisory Committee for Aeronautic said, adding that if properly encouraged, civil aviation should prove in time to be as "revolutionary in the lives of the people as the automobile."

AIR BASE BILL SENT TO BUDGET BUREAU

Chain of Defenses Mapped by Naval Board Is Speeded on Its Way to Congress

COST IS NOT YET REVEALED

Hearings Are Planned to Begin Next Week, With Aim of Ending Them This Month

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 9.—A bill for the establishment of a great chain of air, submarine, destroyer and mine bases, recommended last week by the Naval Board, of which Rear Admiral Arthur J. Hepburn is president, went to the Budget Bureau today. The Bureau of Yards and Docks is busy on the plans for the construction of the bases, which will circle the United States and its possessions from the Aleutian Islands to Panama and thence via the Gulf to the New England Coast.

The cost of constructing the new bases and increasing the facilities of bases now in operation or under construction has not been disclosed, but probably will be revealed next week. The construction will take two or more years, and tht initial appropriation, it was said, will cover only the expenses for the first year. This will run into the millions of dollars.

Chairman Vinson of the House Committee on Naval Affairs said that he hopes to begin hearings on the bill next week, probably on Monday. The hearings will not be prolonged and the bill may be ready for introduction in the House before the end of this month. That it will pass with votes to spare is certain, in the opinion of Mr. Vinson.

The bases, provision for the immediate construction of which will be written into the bill, will include Chesapeake Bay, Jacksonville, Fla., San Juan, P. R., the Canal Zone, Seattle, Sitka and Kodiak, Alaska; Pearl Harbor, Hawaii, and the islands of Guam, Midway, Johnston, Palmyria and Wake in the Pacific. There may be some opposition in the committee to the establishment of all the island bases, but it is not expected to be effective. The real opposition is expected to develop when the legislation reaches the floor of the House, and, subsequently the Senate.

The Pacific bases, in the view of naval authorities as well as a majority of the Committee on Naval Affairs, are essential if the air arm of the service is increased to anywhere near the size the Administration is said to favor. At the present time the only bases for aircraft with the exception of the Panama Canal are the mainland. There are no facilities at Guam or the other islands where, in the opinion of the Hepburn board, construction should be started as early as possible. This means that the legislation may be earmarked as an emergency. In that event any appropriation will be immediately available.

The House Committee on Naval Affairs also is preparing to act promptly on the Administration's new construction program, which includes two battleships, each of 40,000 tons, with main batteries of twelve 16-inch guns. Representative Vinson, when asked if he expected Congress to vote the two battleships, which will be the largest ever constructed for the navy, replied that he had no doubt as to the outcome. The ships, he said, will be authorized and construction started in the next fiscal year.

Cook, chief of the Naval Bureau of Aeronautics; Major Gen. H. H. Arnoud, chief of the Army Air Service; Edward J. Noble, chairman of the Civil Aeronautics Authority; Colonel Charles A. Lindbergh, Lyman J. Briggs, director of the National Bureau of Standards; Charles G. Abbot of Smithsonian Institution; Captain Sydney M. Kraus, U. S. N., and Brig. Gen. A. W. Robins, U. S. A.

German air preparedness is understood to have been in the committee's mind when in a reference to the German-Czecho-Slovakian crisis it cited "the overshadowing of air power in international affairs." The committee is said to have in its possession reliable information which gives in detail the air activities and programs of other nations. Colonel Lindbergh, according to unconfirmed reports, was the source of much of this information.

Air Power's Importance Cited

"Air power at the present time," the committee said, "is a dominant factor in the strength of a nation and in enabling it to maintain its independent existence and territorial integrity. Accepted theories of warfare give a steadily increasing place to air power."

In the "interest of peace and security" the committee asserted that the army and navy should take the lead in the development of adequate and effective air arms and urged the adoption of "a sound program for expanding the productive capacity of the aircraft industry, and for the training of the necessary active and reserve personnel."

"The crisis in Europe in the Fall of 1938 brought forcibly to world-wide attention the overshadowing influence of air power in international affairs," the board pointed out.

"The realization," the committee continued, "that aircraft had been built in great numbers and developed to a point where they are capable of operating at high speeds over long distances with large bombing loads thrust upon the world a new concept of national defense. The imminent prospect of noncombatants being subject to indiscriminate attack by aircraft stirred the imaginations and fears of all peoples.

Points to Peoples' View

"The sudden and rather general appreciation of the potentialities of modern air power is the most significant event that has occurred in modern times in connection with strengthening the desires of peoples to avoid war."

Taking up what in the view of the committee is the heart of the problem—scientific research—the report stated that the efficiency of an air force is in approximately direct proportion to the emphasis that is placed on scientific research in aeronautics, combined with engineering development, production and training.

"The history of 1938," the report said, "bears witness as to how a nation in the space of a few years, by concentrating much of its scientific research and industrial resources on the development of air power, could gain, for the time being, a dominating position. Once a nation has embarked upon a program intended to develop its air strength to maximum effectiveness, the provision of adequate laboratory research facilities and the training of skilled research personnel become of fundamental importance.

"The major European powers at the present time are engaged on relatively large aircraft building programs which are being prosecuted under feverish pressure. More numbers of aircraft, however, are not in themselves sufficient for an adequate modern air force. It is of even greater importance that the aircraft be of the most effective design. The advances in aeronautical science are so rapid that assiduous attention to the subject cannot with safety be suspended for even a brief period.

Increase in Speeds Noted

"The fact that modern military aircraft require frequent replacement by improved types brings forcibly to our attention the necessity of basing their designs upon the best and most reliable data from research laboratories. New information is being obtained in the aeronautical laboratories of many nations and unless our own laboratories keep pace, the United States cannot hope to compete with for- activities of other nations to extend their commercial trade to cover all international routes and the result is, the committee declared, a serious competition in the international field which the United States must successfully meet if its air supremacy in these trades is to be maintained. In the maintenance of this supremacy research must, the committee added, play a commanding role.

"In the rapidly advancing science of aeronautics the technical development of aircraft," the committee concluded, "is directly dependent upon scientific laboratory research. The recent great expansion of research facilities by other nations will bring to an end the period of American leadership in the technical development of aircraft unless the United States also constructs additional research facilities."

A special committee is now considering this problem, and its findings will be made the subject of a special report to the President.

Civil Aviation Expansion Urged

By The Associated Press.

WASHINGTON, Jan. 9.—Increased use of private aircraft is highly desirable, the report of the National Advisory Committee for Aeronautic said, adding that if properly encouraged, civil aviation should prove in time to be as "revolutionary in the lives of the people as the automobile."

More Money to Be Asked

(By Science Service

WASHINGTON, Jan. 9.—Provision of more money for research and laboratories will be urged in a special report to be issued next week, by the National Advisory Committee for Aeronautics, it was learned. This special statement is referred to in the letter from NACA chairman, Dr. Joseph S. Ames to the President accompanying the annual report, made public today.

Many fundamental developments such as more efficient wings, propeller blades, fuselages and other airplane parts, have come out of the laboratory of the National Advisory Committee for Aeronautics which has served as a model for the entire world. Among the better known devices developed in its shops are the tricycle landing gear, the NACA cowling and the stall warning indicator. The landing gear is now coming into general use; the cowling added twenty miles an hour to the speed of every plane equipped with radial engines the world over; and the stall warning, only recently announced, has been hailed as a safety device of great importance.

the committee to the establishment of all the island bases, but it is not expected to be effective. The real opposition is expected to develop when the legislation reaches the floor of the House, and, subsequently the Senate.

The Pacific bases, in the view of naval authorities as well as a majority of the Committee on Naval Affairs, are essential if the air arm of the service is increased to anywhere near the size the Administration is said to favor. At the present time the only bases for aircraft with the exception of the Panama Canal are the mainland. There are no facilities at Guam or the other islands where, in the opinion of the Hepburn board, construction should be started as early as possible. This means that the legislation may be earmarked as an emergency. In that event any appropriation will be immediately available.

The House Committee on Naval Affairs also is preparing to act promptly on the Administration's new construction program, which includes two battleships, each of 40,000 tons, with main batteries of twelve 16-inch guns. Representative Vinson, when asked if he expected Congress to vote the two battleships, which will be the largest ever constructed for the navy, replied that he had no doubt as to the outcome. The ships, he said, will be authorized and construction started in the next fiscal year.

3,000 NEW ARMY AIRPLANES AUTHORIZED IN HOUSE BILL; STARTS U. S. DEFENSE PLAN

AIR CORPS PLAN TOLD

12,000 Ships Yearly in Three Years Predicted by General Arnold

NEEDED FLIERS PROVIDED

Both Senate and House to Get Measures to Speed Building and Other Items This Week

Special to THE NEW YORK TIMES.

WASHINGTON, Jan. 18.—An Administration bill giving the Secretary of War blanket authority to provide up to 6,000 airplanes to the air corps, together with such airships and free and captive balloons as he deemed necessary for training purposes, was introduced in the House today by Representative May, chairman of the Military Affairs Committee. A similar measure will be introduced in the Senate tomorrow by Senator Sheppard, chairman of the companion committee in the upper branch.

The authorization bill was one of nine measures the War Department believes necessary to carry out the recommendations of President Roosevelt's national defense message to Congress. It was introduced in the exact form in which the department drafted it and Mr. Sheppard will follow the same course. The eight remaining bills are expected to be delivered at the Capitol tomorrow or Friday.

Further Military Bills

as he deemed necessary for training purposes, was introduced in the House today by Representative May, chairman of the Military Affairs Committee. A similar measure will be introduced in the Senate tomorrow by Senator Sheppard, chairman of the companion committee in the upper branch.

The authorization bill was one of nine measures the War Department believes necessary to carry out the recommendations of President Roosevelt's national defense message to Congress. It was introduced in the exact form in which the department drafted it and Mr. Sheppard will follow the same course. The eight remaining bills are expected to be delivered at the Capitol tomorrow or Friday.

Further Military Bills

These bills were outlined by General Malin Craig, Chief of Staff, to the Senate committee during the day as covering the following points:

Increased personnel for the air Corps and for the other branches of the service affected by the President's program.

An added number of reserve officers authorized to be taken into the air corps on active duty.

Increased authorization for training air force personnel in civilian schools; increased authorization for training civilian instructors in army flying schools, and additional training planes to be assigned to civilian schools.

More army housing for the Panama Canal Zone.

Broadened powers of procurement for the War Department, probably including the authority to negotiate contracts for airplanes without the delay of competitive bidding.

Larger authorization to place "educational orders" with industries needed for wartime production.

With this legislation, General Craig told the Senators, the Secretary of War will be able to carry out the defense program as soon as appropriations are available.

Other details of the suggested program were outlined to the House committee by Major Gen. H. H. Arnold, Chief of Air Corps.

Planning Against Attack

Representative Short of Missouri asked General Arnold at one point what specific danger of attack the general staff had in mind in building up the air force, and the general replied that "I don't think I ought to answer." Afterward Mr. Short said General Craig had agreed to answer the question later to the committee.

General Arnold ended a formal statement of Air Corps plans as follows:

"I cannot emphasize too strongly that this supplemental budget, plus the regular 1940 budget, will give us an air force for defense only, an air corps organized and equipped for the defense of this country and not for operation in the Eastern Hemisphere or for the attack of any other country.

"It is in no sense an aggressive, offensive force. It brings a level in air preparedness below which we cannot safely fall in view of world conditions now prevailing and in prospect."

The Air Corps chief said that it was intended to spend the $300,000,000 recommended by the President in the following way:

New airplanes, about 3,000—$170,000,000.

Ground establishments, including five new bases, Puerto Rico, Alaska, Hawaii and two in continental United States—$62,000,000.

Increased personnel, including about 2,200 more officers and 25,000 more enlisted men, of whom 1,200

HOUSE BILL STARTS U. S. DEFENSE PLAN

Continued From Page One

would be flying cadets—$33,000,000.

Research—$3,000,000.

Maintenance and added equipment —$10,000,000.

Presumably the remaining $22,000,000 would be used in meeting generally increased costs of a larger Air Corps.

Projects 12,000 Planes a Year

Asked whether existing aviation plants could turn out the required number of planes, General Arnold estimated that the country's capacity was now about 2,500 a year. He said this could be trebled in two years and in three years the plants could be turning out 12,000 army planes.

He added that expansion of the industry should be in the center of the country, for strategic reasons.

He said the program had been drawn so that everything, airplanes, pilots, mechanics, bases and equipment, would be ready together at the end of two years.

To get the needed planes within two years, Congress was being asked to alter existing law requiring competitive bidding. In addition to the procurement of 3,000 or more planes in record time, General Arnold said, the Air Corps wanted to test what the country's airplane production could accomplish with all manufacturers working at top speed.

During the period of what he described as the present emergency, it was desired to place the orders in such a manner as to prevent the overloading of a few plants and the underloading of others.

He said that several factories, including Consolidated, Northrop, Seversky, Vought, Sikorsky and Glen Martin had no orders from the army now and were busy on foreign sales. All of these firms had supplied the army in the past.

While he favored competitive bidding in normal times, General Arnold said the entire aviation industry of the country must be put to work immediately if "we are to get these planes." He added that the Air Corps was familiar with the cost for every type of plane in every airplane plant in the country and that it could negotiate contracts permitting only a "fair profit" of 10 per cent.

Among the questions he declined to answer publicly was one seeking to find out how many of the planes authorized under the existing plan for 2,320 would be obsolescent when the program was completed.

General Arnold said that the useful life of a training plane was almost unlimited, as was that of observation planes. Bombing planes were good for from six to eight years; pursuit planes, which had to be better than anything brought against them, became obsolete in two to four years.

The General urged that an added $4,000,000 be put into the authorization for research work. At present the War Department Supply Bill would authorize $3,000,000 and the emergency program another $5,000,000 for research during the coming fiscal year; General Arnold thought the engineers ought to have $12,000,000.

For Development of Speed

"We don't know about speeds above 400 miles an hour," he said, illustrating the kind of research he had in mind. "We are told that engines in the wings will deliver 30 per cent more power at speeds over 300 miles an hour, and we ought to find that out, because we could use that added horsepower in more speed."

He added that the 1,000-horsepower motor used to be a thing to marvel at, that power was now "only a drop in the bucket." He said that the engineers needed 2,000-horsepower units and would soon need power plants of 3,000 and 4,000 horsepower, if they were to attain the speeds in excess of 500 miles an hour which are considered probable within a few years.

Germany, the general said, maintained five research centers as large as Wilbur Wright Field, the army's only experimental station for air research, at Dayton, Ohio.

"I don't know what they use for money," he remarked to a question of what this cust cost, "but they keep these fields running."

The necessary pilots could be turned out in time to man the new planes by a revised training method the Air Corps was prepared to put into effect, General Arnold testified.

Selected graduates of the fourteen private flying schools accredited by the Civil Aeronautics Authority would be put through the Air Corps training field at San Antonio to learn to fly service types. Their tactical training will be in the units to which they were assigned.

Another change he recommended was legislation permitting the War Department to pay for experimental planes built to its specifications. Under the present system, he explained, manufacturers must build, at their own expense, prototypes of machines they wanted to offer to the air corps, and these sometimes cost $600,000, including initial experimental work.

"We must poy for these prototypes and we must let them know we will pay for them," General Arnold said.

Work also started during the day on translating into legislative action the President's recommendations for a larger naval air force. Representative Vinson of Georgia, chairman of the Naval Affairs Committee, let it be known he would soon introduce a bill authorizing the expenditure of $65,000,000 on airplane, destroyer and submarine bases for the navy.

He introduced a measure which would authorize the Secretary of the Navy to modernize the Argonaut, the Narwahl and the Nautilus at a cost of not more than $5,500,000, and a bill authorizing the President to acquire or convert vessels to provide one seaplane tender, one destroyer tender, a mine sweeper, a submarine tender, a fleet tug and an oiler, at a cost not to exceed $50,000,000.

The Houre Military Affairs Committee will continue its hearings tomorrow, with Brig. Gen. George C. Marshall, Deputy Chief of Staff, on the stand. The Senate committee will meet again Friday to hear General Arnold.
